Salesforce Process Automation Accredited Professional Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which of the following are true regarding the Lead Conversion process? Choose two

- A. An Account is created if one with the same name is not found
- B. Custom Lead fields can be inserted into standard or custom Account, Contact or Opportunity fields.
- C. An Opportunity is always created
- D. A Contact is created if one with the same name is not found

Answer: A,B

Explanation:

During the Lead Conversion process in Salesforce, an Account is created if an existing one with the same name isn't found. Additionally, Salesforce allows for the mapping of custom Lead fields to standard or custom fields on Account, Contact, or Opportunity objects, ensuring that important information from the Lead is preserved and transferred during conversion. Reference: Salesforce Help - Customize How Leads Get Converted

NEW QUESTION # 20

What is the maximum number of versions per flow that one can create in Enterprise or Unlimited Edition?

- A. 50.0
- B. 1000.0
- C. 900.0
- D. 100.0

Answer: A

NEW QUESTION # 21

An administrator wants to update a record, in the future, when a specified time is reached. Which tool should the Administrator use?

- A. Process Builder
- B. Workflow Rules
- C. Flow Builder
- D. Approvals

Answer: C

Explanation:

To update a record at a specified future time, Flow Builder can be used to create a Scheduled Flow. Scheduled Flows allow administrators to define automation that runs at specific times, making it possible to update records based on time-based criteria without manual intervention. This feature is particularly useful for scenarios where record updates need to occur on a scheduled basis. Reference: Salesforce Help - Scheduled Flows

NEW QUESTION # 22

The architect is designing a flow where a screen flow is used to create a contact and display a confirmation screen. While the confirmation screen is displayed, remote API is invoked to update the contact in the external system. The update fails. How should the architect resolve the design?

- A. Use Apex since updating a contact in the remote system is not possible in flow.
- B. Add error handling mechanism to the flow and test often and early.
- C. Use a separate transaction to update the contact in the external system.

- Answer: B**

In the scenario where a remote API update fails after creating a contact through a screen flow, incorporating an error handling mechanism within the flow is essential. This allows the flow to gracefully handle exceptions and errors, providing feedback or rollback options as necessary. Regular testing during the development phase helps identify potential issues early, ensuring the flow functions as intended upon deployment. Reference: Salesforce Help - Add Fault Handling to Your Flow

What are three basic building blocks of a flow?

- Answer: A,B,C**
