Latest CKA Exam Camp - CKA Latest Brindumps Questions

To contribute the long-term of cooperation with our customers, we offer great discount for purchasing our CKA exam pdf. Comparing to other dumps vendors, the price of our CKA questions and answers is reasonable for every candidate. You will grasp the overall knowledge points of CKA Actual Test with our pass guide and the accuracy of our CKA exam answers will enable you spend less time and effort.

Linux Foundation Certified Kubernetes Administrator (CKA) Program is an industry-leading certification designed for IT professionals who want to prove their expertise in Kubernetes administration. Kubernetes is an open-source container orchestration platform that automates the deployment, scaling, and management of containerized applications. The CKA program is designed to assess an individual's skills in Kubernetes administration and to provide a certification that is recognized by the industry.

Linux Foundation Certified Kubernetes Administrator (CKA) Program Exam Sample Questions (Q78-Q83):

NEW QUESTION # 78

You are deploying an application on Kubernetes that requires access to a specific external service. This service is only accessible from the cluster network. Describe how you can implement a NetworkPolicy to secure access to the external service from the application pods.

Answer:

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

1 . Create a NetworkPolicy for the Application Pods:

- Define a NetworkPolicy rule that allows ingress traffic from the application pods to the external service. This policy should be applied to the namespace where the application pods are running.
- 2. Configure Network Access to the External Service: - Ensure that the external service is accessible from the cluster network. This might involve using a dedicated load balancer, a service proxy, or a network tunnel.
- 3. Implement a Service for the External Service: - Create a Kubernetes Service to represent the external service and expose it within the cluster. This service can be a headless service, which doesn't provide a public endpoint, as the external service is only accessible from the cluster network.
- 4. Verify Network Policy Configuration: - Verify that the NetworkPolicy is applied correctly and that the application pods can access the external service. Use 'kubectl get networkpolicies myapp-networkpolicy' to check the policy status and 'kubectl describe pod myapp-XXXX' (where XXXX is a pod name) to check the pod's network configuration.

NEW QUESTION # 79

Score: 7%

Task

Given an existing Kubernetes cluster running version 1.20.0, upgrade all of the Kubernetes control plane and node components on the master node only to version 1.20.1.

Be sure to drain the master node before upgrading it and uncordon it after the upgrade.

You are also expected to upgrade kubelet and kubectl on the master node.

Answer:

Explanation:

See the solution below.

Explanation

SOLUTION:

```
[student@node-1] > ssh ek8s
```

```
kubectl cordon k8s-master
```

```
kubectl drain k8s-master --delete-local-data --ignore-daemonsets --force apt-get install kubeadm=1.20.1-00 kubelet=1.20.1-00
```

```
kubectl=1.20.1-00 --disableexcludes=kubernetes kubeadm upgrade apply 1.20.1 --etcd-upgrade=false systemctl daemon-reload
```

```
systemctl restart kubelet kubectl uncordon k8s-master
```

NEW QUESTION # 80

Given a partially-functioning Kubernetes cluster, identify symptoms of failure on the cluster.

Determine the node, the failing service, and take actions to bring up the failed service and restore the health of the cluster. Ensure that any changes are made permanently.

You can ssh to the relevant nodes (k8s-master-0 or k8s-node-0) using:

```
[student@node-1] $ ssh <nodename>
```

You can assume elevated privileges on any node in the cluster with the following command:

```
[student@nodename] $ | sudo -i
```

Answer:

Explanation:

See the solution below.

Explanation

solution

□

NEW QUESTION # 81

Get the memory and CPU usage of all the pods and find out top 3 pods which have the highest usage and put them into the cpusage.txt file

- A. // Get the top 3 pods

```
kubectl top pod --all-namespaces | sort --reverse --key 3 --numeric | head -8
```

 // putting into file

```
kubectl top pod --all-namespaces | sort --reverse --key 6 --
```

- ```

numeric | head -6 > cpu-usage.txt
// verify
cat cpu-usage.txt

```
- B. // Get the top 3 pods

```

kubectl top pod --all-namespaces | sort --reverse --key 3 --
numeric | head -3
// putting into file
kubectl top pod --all-namespaces | sort --reverse --key 3 --
numeric | head -3 > cpu-usage.txt
// verify
cat cpu-usage.txt

```

**Answer: B**

## NEW QUESTION # 82

Score: 5%

Task

From the pod label name=cpu-utilizer, find pods running high CPU workloads and write the name of the pod consuming most CPU to the file /opt/KUTR00401/KUTR00401.txt (which already exists).

**Answer:**

Explanation:

See the solution below.

Explanation

Solution:

```

kubectl top -l name=cpu-user -A
echo 'pod name' >> /opt/KUT00401/KUT00401.txt

```

## NEW QUESTION # 83

.....

You won't need anything else if you prepare for the exam with our Linux Foundation CKA Exam Questions. Our experts have prepared Linux Foundation CKA dumps questions that will eliminate your chances of failing the exam. We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the Linux Foundation CKA Exam Preparation.
