100% Pass Quiz Efficient SAP - E-S4CPE-2405 - SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Questions Answers

ActualTorrent website is fully equipped with resources and the questions of SAP E-S4CPE-2405 exam, it also includes the SAP E-S4CPE-2405 exam practice test. Which can help candidates prepare for the exam and pass the exam. You can download the part of the trial exam questions and answers as a try. ActualTorrent provide true and comprehensive exam questions and answers. With our exclusive online SAP E-S4CPE-2405 Exam Training materials, you'll easily through SAP E-S4CPE-2405 exam. Our site ensure 100% pass rate.

SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Data Migration and Business Process Testing: This section of the exam measures skills of SAP implementation consultants and covers the core principles of migrating data into SAP systems while ensuring that business processes run as intended. It involves understanding the methods for transferring data, verifying its accuracy, and executing process testing to confirm that the system meets operational requirements.
Topic 2	• Introduction to Cloud Computing and SAP Cloud ERP Deployment Options: This section of the exam measures skills of cloud solution architects and focuses on the fundamentals of cloud computing, along with the different deployment models available for SAP Cloud ERP. It addresses the benefits, challenges, and selection criteria for choosing the most suitable deployment option in alignment with business goals.
Topic 3	• Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.

Topic 4	• System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.
Topic 5	• Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.

SAP E-S4CPE-2405 Reliable Test Online & Online E-S4CPE-2405 Training Materials

ActualTorrent is a convenient website to provide service for many of the candidates participating in the IT certification exams. A lot of candidates who choose to use the ActualTorrent's product have passed IT certification exams for only one time. And from the feedback of them, helps from ActualTorrent are proved to be effective. ActualTorrent's expert team is a large team composed of senior IT professionals. And they take advantage of their expertise and abundant experience to come up with the useful training materials about E-S4CPE-2405 Certification Exam. ActualTorrent's simulation test software and related questions of E-S4CPE-2405 certification exam are produced by the analysis of E-S4CPE-2405 exam outline, and they can definitely help you pass your first time to participate in E-S4CPE-2405 certification exam.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q41-Q46):

NEW QUESTION # 41
How do you assign roles to users in SAP S/4HANA Cloud Private Edition?

- A. SAP Fiori app "Maintain Business Users"
- B. SAP Fiori app "Launchpad Designer"
- C. SAP Fiori app "Maintain Business Roles"
- D. Role maintenance in the SAP GUI

Answer: A

NEW QUESTION # 42
What are some characteristics of private cloud? Note: There are 2 correct answers to this question.

- A. Software installation on customer site
- B. Lower total cost of ownership than on premise
- C. Perpetual license
- D. Single-tenant server

Answer: A,D

NEW QUESTION # 43
You are designing side-by-side extensions in the customer's SAP BTP system. Which extensions can you use?
Note: There are 2 correct answers to this question.

- A. Classical code-based extensions with SAP Business Application Studio
- B. Low/no-code extensions made with SAP Build
- C. Tier-3 developer extensions in the ABAP environment

- D. In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition

Answer: B,D

Explanation:
Side-by-side extensions are developed outside the SAP S/4HANA core system, typically on SAP BTP, to extend functionality while maintaining a Clean Core. The question asks which extensions can be used in this context within the customer's SAP BTP system. Let's analyze:
* A. Tier-3 developer extensions in the ABAP environment: This is incorrect. Tier-3 developer extensions refer to complex ABAP customizations within the SAP S/4HANA system (on-stack), not side-by-side on BTP. They are managed in the ABAP environment of S/4HANA, not hosted externally.
* B. Classical code-based extensions with SAP Business Application Studio: This is incorrect. While SAP Business Application Studio (BAS) is used on BTP for coding extensions (e.g., CAP-based apps),
"classical code-based" implies traditional ABAP or SAP GUI extensions, which are not side-by-side or BTP-hosted. Modern BAS extensions align with option D's low/no-code focus.
* C. In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition: This is correct in a nuanced way. While the question specifies side-by-side extensions on BTP, SAP documentation often includes in-app extensions (e.g., via Custom Fields app) as complementary to side-by-side scenarios. These can integrate with BTP-hosted extensions, making them relevant in a hybrid design. However, strictly speaking, they are on-stack, so this choice reflects SAP's broader extensibility context.
* D. Low/no-code extensions made with SAP Build: This is correct. SAP Build, part of SAP BTP, enables low/no-code development of side-by-side extensions (e.g., custom UIs, workflows) that integrate with SAP S/4HANA Cloud Private Edition. It's a key tool for citizen developers to create BTP-hosted extensions, aligning perfectly with the side-by-side approach.
In summary, C (In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition) and D (Low/no-code extensions made with SAP Build) are usable extensions, with D being the clearest side-by-side fit and C reflecting a complementary integration possibility.
Note: If strictly interpreted, D and a BAS-based coding option would be ideal, but C aligns with SAP's broader intent.

NEW QUESTION # 44
When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is Completed
- B. When the project status is Finished
- C. When the project status is In Progress
- D. When the project status is Not Started

Answer: D

Explanation:
The data retention period in the SAP S/4HANA Migration Cockpit defines how long migrated data (e.g., in staging tables) is retained after migration. Let's analyze when this is specified:
* A. When the project status is In Progress: This is incorrect. Once a migration project is in progress, data loading and validation are underway, and the retention period cannot be changed-it must be set beforehand.
* B. When the project status is Not Started: This is correct. In the Migration Cockpit, the data retention period is specified when creating a migration project, before any activities begin (i.e., when the status is
"Not Started"). This setting determines how long data remains accessible in the system (e.g., for auditing) and must be defined at the project's outset in the Fiori app.
* C. When the project status is Finished: This is incorrect. "Finished" is not a formal status in the Migration Cockpit, but even if interpreted as post-migration, the retention period cannot be set after migration is complete-it's a pre-migration configuration.
* D. When the project status is Completed: This is incorrect. Once the project is completed (i.e., data is migrated and validated), the retention period is already in effect and cannot be specified-it's locked at that point.
In summary, the data retention period is specified B (When the project status is Not Started).

NEW QUESTION # 45

How can you assign an authorization to a user?

- A. The authorization has to be assigned to both the user master record and the role profile.
- B. The authorization is associated with a role that has to be assigned to the user master record.
- C. The user has to be assigned to the authorization profile in SAP IMG.
- D. The user has to be assigned to a user group that contains a role profile including the authorization.

Answer: B

Explanation:
In SAP S/4HANA Cloud, private edition, authorizations are managed through roles assigned to user master records. This approach streamlines permission management and ensures users have appropriate access rights.
Authorizations in SAP S/4HANA Cloud Private Edition control user access to apps and functions, managed via a role-based approach. Let's evaluate:
* A. The authorization is associated with a role that has to be assigned to the user master record:
This is correct. In SAP S/4HANA Cloud Private Edition, authorizations are bundled into business roles (created in the "Maintain Business Roles" app), which are then assigned to user master records via the
"Maintain Business Users" Fiori app. This links the user to the role's permissions.
* B. The user has to be assigned to the authorization profile in SAP IMG: This is incorrect.
Authorization profiles are a legacy concept from on-premise systems (e.g., via PFCG in SAP GUI), not the primary method in Private Edition, which uses Fiori-based role management instead of direct IMG assignments.
* C. The user has to be assigned to a user group that contains a role profile including the authorization: This is incorrect. User groups in SAP S/4HANA are for organizational purposes (e.g., reporting), not for assigning authorizations-roles are assigned directly to users, not via groups.
* D. The authorization has to be assigned to both the user master record and the role profile: This is incorrect. Authorizations are not assigned directly to user master records; they are embedded in roles, which are then linked to users. Dual assignment is not required.
In summary, authorizations are assignedA(The authorization is associated with a role that has to be assigned to the user master record).

NEW QUESTION # 46

......

The software version is one of the three versions of our E-S4CPE-2405 exam prep. The software version has many functions which are different with other versions'. On the one hand, the software version of E-S4CPE-2405 test questions can simulate the real examination for all users. By actually simulating the test environment, you will have the opportunity to learn and correct self-shortcoming in study course. On the other hand, although you can just apply the software version in the windows operation system, the software version of E-S4CPE-2405 Exam Prep will not limit the number of your computer. If you use the software version, you can download the app more than one computer, but you can just apply the software version in the windows operation system. We believe the software version of our E-S4CPE-2405 test torrent will be very useful for you, we hope you can pass you exam and get your certificate successfully.
