Peoplecert PeopleCert DevOps Site Reliability Engineer (SRE) Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which of the following communication and collaboration practices BEST contribute to the effectiveness of the SRE team?

- A. Data in SRE should be managed separately from others.
- B. Project managers share limited data only upon request.
- **C. Data is flowing freely within and around the SRE team.**
- D. Team members should manage their own data discretely.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SRE is built on transparency and broad information sharing. The SRE Book states: "High-quality operations require that information flows freely between product development, SRE, and associated teams." (SRE Book

- Chapter: Communication and Collaboration). Effective incident management also depends on complete data availability:

"Centralized, shared information reduces cognitive load and improves incident resolution." (SRE Workbook - Incident Management).

Option B aligns perfectly with SRE principles: data must flow freely, ensuring everyone has access to metrics, logs, architecture details, incident context, and SLOs.

Options A, C, and D promote restricted or fragmented data practices, which are directly contrary to SRE design. SRE teams avoid information silos.

Thus, B is correct.

NEW QUESTION # 27

Which of the following BEST describes the engineering side of SRE?

- A. Applying network design and deployment best practices to achieve operational performance targets
- **B. Applying software development best practices to solving operational problems and automating solutions**
- C. Applying infrastructure engineering principles to build and maintain the stable delivery of operational services
- D. Applying network and infrastructure development best practices for stable operations and good reliability

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The foundational definition of SRE, as stated in Google's SRE Book, is that SRE uses software engineering as its primary tool to solve operational problems: "SRE is fundamentally doing operations work using software engineering approaches." (SRE Book - What Is SRE?). This includes building automation, writing tools, creating pipelines, and eliminating manual work. The "engineering side" focuses specifically on applying coding practices, testing, CI/CD, version control, and automation frameworks to operational domains such as deployment, monitoring, incident response, and capacity planning.

Option D captures this precisely: using software engineering best practices to solve operational issues and drive automation.

Options A, B, and C focus too narrowly on network or infrastructure engineering. While these can be components of SRE, they do not describe its engineering foundation as Google defines it.

Thus, D is the correct answer.

NEW QUESTION # 28

Kaizen is the Japanese word for continuous improvement using small incremental changes.

Which of the following BEST describes a kaizen mindset?

- A. A desire to seek out the problem, find their root cause or causes and document the lessons learned
- B. Enthusiasm for learning and applying problem-solving techniques in order to improve performance
- **C. A willingness to recognize problems, prioritize them, find their solutions, and share lessons learned**
- D. Passionate about improvement by using experimentation to identify the best-possible problem solutions

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Although Kaizen originates from Japanese lean culture, its mindset aligns strongly with SRE's continuous improvement philosophy. The SRE Book emphasizes a culture where teams identify problems, prioritize them, fix them, and share knowledge, stating that: "Incremental improvements and learning from failures lead to resilient systems, and teams must continuously refine processes and technology." (SRE Book - Chapters:

"Postmortem Culture," "Eliminating Toil"). Option C captures all key Kaizen elements-problem recognition, prioritization, solution, and knowledge sharing-mirroring SRE's blameless postmortem and iterative improvement practices.

Option A emphasizes learning but lacks problem ownership.

Option B focuses too narrowly on root cause analysis.

Option D emphasizes experimentation but misses prioritization and lesson-sharing.

Thus, C is the best match for a Kaizen mindset within the SRE framework.

NEW QUESTION # 29

Which of the following BEST describes an advantage of a container-based structure?

- A. The portability created by containers enables software to run independently of the host operating system
- B. The security of applications in containers is simplified because they share the security of the host system
- C. The lightweight nature of containers requires fewer developers to actually create the software code
- D. Software runs much more efficiently in containers because of the ability to run on virtual machines

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Containers provide a major advantage that aligns with SRE: portability and environment consistency. The SRE Workbook describes containers as: "lightweight, portable units that encapsulate applications and dependencies, ensuring consistent behavior across environments." This independence from the host OS environment enables predictable deployments and simplifies automation, scaling, and orchestration- especially when used with Kubernetes.

Option A captures this exact benefit: portability and independence from the host OS.

Option B is incorrect-containers do not reduce the number of developers required.

Option C incorrectly claims that efficiency comes from virtual machines; containers are typically more efficient because they avoid VM overhead, not leverage it.

Option D is incorrect-containers do not "inherit" security automatically; in fact, they require additional security controls.

Thus, A is the correct answer.

NEW QUESTION # 30

Which of the following is BEST described as the role responsible to maintain the live incident state document?

- A. The planning specialist
- B. The logistics specialist
- C. The communications lead
- D. The incident commander

Answer: D
