Free demo will be provided for AD0-E725 study materials, and you can know deeper what you will buy. We offer you free update for 365 days after you purchasing. And the latest version will be sent to your email address automatically. Therefore you can get the latest information of the AD0-E725 Exam Dumps. Besides, we have the technicians to examine the website at times, and it will provide you with a clean and safe shopping environment. You just need to buy AD0-E725 study materials with ease.

Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I/O events and webhooks to create automated and connected business processes.
Topic 2	<ul style="list-style-type: none">Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.

Topic 3	<ul style="list-style-type: none"> Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.
Topic 4	<ul style="list-style-type: none"> Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.

AD0-E725 Exam Pattern, AD0-E725 New Cram Materials

ITExamReview AD0-E725 desktop and web-based practice exams are distinguished by their excellent features. The AD0-E725 web-based practice exam is supported by all operating systems and can be taken through popular browsers including Chrome, MS Edge, Internet Explorer, Opera, Firefox, and Safari. Windows computers can run the desktop Adobe AD0-E725 Practice Test software. You won't require a live internet connection to use the desktop Adobe exam simulation software once you've verified the product's license.

Adobe Commerce Developer Expert Sample Questions (Q16-Q21):

NEW QUESTION # 16

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- A. Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.**
- B. Install only official patches supplied by them to maintain upgradability.
- C. Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.

Answer: A

Explanation:

If a bug fix patch has not yet been officially released by Adobe (via Quality Patches Tool (QPT)), developers can apply custom patches using the cweagans/composer-patches package.

Option A is best practice in general, but in urgent scenarios, custom patches are allowed.

Option B applies only for official Adobe patches distributed via QPT, not for community-supplied or custom fixes.

Option C is correct: cweagans/composer-patches allows applying custom patches via composer.json until an official fix is available.

Adobe Commerce DevDocs - Apply custom patches

NEW QUESTION # 17

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Prevent users from accessing certain areas of the website based on their IP address.
- B. Ensure that all user input is sanitized before being processed by the application.
- C. Restrict which resources (scripts, styles, images) are allowed to load on the website.**

Answer: C

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- * Which scripts can be executed (script-src).
- * Which stylesheets can be applied (style-src).
- * Which images and media can be loaded (img-src, media-src).
- * Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded." - Adobe Commerce DevDocs: Content Security Policy

* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts." - Adobe Commerce Security Guide

NEW QUESTION # 18

A Developer connects to a Magento-Cloud CLI and creates a new branch for environment using the following Git command: git checkout -b <branch-name> The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

- A. git branch -b <branch-name> should be used instead of Git checkout.
- **B. magento-cloud environment:branch <branch-name> should be used instead of Git commands.**
- C. magento-cloud environment:redeploy --no-wait should be executed after branch creation.

Answer: B

NEW QUESTION # 19

A client receives an alert stating that storage on their production environment is nearly full. They are using Pro architecture and are concerned about storage capacity. A Developer is asked to increase the disk size.

How should this problem be solved?

- A. Modify the magento.app.yaml file.
- B. Extend their Adobe license.
- **C. Open a ticket with Adobe support.**

Answer: C

NEW QUESTION # 20

A Developer is tasked with creating a new index. The custom indexer is not automatically updating the product data.

How should the Developer solve this issue?

- A. Implement custom database triggers.
- **B. Use the mview to allow tracking database changes.**
- C. Use an event observer to monitor data changes.

Answer: B

Explanation:

Magento uses the materialized view (mview) system to track database changes and trigger automatic updates to indexers.

B (mview) is correct because it enables Magento to automatically detect data changes and update indexers incrementally.

A (observer) is not reliable for large indexing operations and not the recommended method.

C (database triggers) are discouraged and not used in Magento's indexing mechanism.
