2026 Scaled Agile SAFe-RTE: SAFe Release Train Engineer Authoritative Reliable Exam Cram

If you are a child's mother, with SAFe-RTE test answers, you will have more time to stay with your child; if you are a student, with SAFe-RTE exam torrent, you will have more time to travel to comprehend the wonders of the world. In the other worlds, with SAFe-RTE guide tests, learning will no longer be a burden in your life. You can save much time and money to do other things what meaningful. You will no longer feel tired because of your studies, if you decide to choose and practice our SAFe-RTE test answers. Your life will be even more exciting.

The SAFe RTE is responsible for coordinating the activities of several Agile teams working together on a common program. The RTE ensures that the teams are working effectively and efficiently, and that they are delivering high-quality software on schedule. The RTE is also responsible for facilitating the Agile Release Train (ART) ceremonies, such as PI Planning, System Demos, and Inspect and Adapt workshops.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q87-Q92):

NEW QUESTION # 87

A group of developers, Scrums Masters, and Product Owners are interested in sharing knowledge and learning more about DevOps concepts. How can the Release Train Engineer help them collaborate to gain knowledge about DevOps?

- A. Schedule a DevOps bi-weekly synchronization
- B. Align them with the System Team
- C. Provide DevOps training
- **D. Help them launch a DevOps community of practice**

Answer: D

Explanation:

The Release Train Engineer (RTE) can play a pivotal role in fostering a culture of continuous learning and improvement, particularly in the area of DevOps. According to the SAFe framework, one effective way the RTE can support this is by helping to launch a DevOps Community of Practice (CoP).

A Community of Practice is an organized group of people who share a common interest in a specific technical or business domain. They collaborate regularly to share information, improve their skills, and actively work on advancing their knowledge of the domain. In the context of DevOps, a CoP can provide a platform for developers, Scrum Masters, and Product Owners to share experiences, learn from each other, and explore new ideas and techniques that can be applied to their work.

The RTE can facilitate the creation of a DevOps CoP by:

- * Identifying and Engaging Interested Individuals: The RTE can identify individuals who are passionate about DevOps and willing to share their knowledge. These individuals can form the core group that initiates and leads the CoP.
- * Providing Resources and Support: The RTE can help by providing resources such as meeting spaces (physical or virtual), communication tools, and access to educational materials that can support the CoP's activities.
- * Promoting the CoP: The RTE can promote the CoP within the organization to attract more members and ensure that it receives the necessary attention and support from leadership.
- * Facilitating Knowledge Sharing: The RTE can organize regular meetings, workshops, and talks that focus on DevOps topics, encouraging members to present case studies, best practices, and lessons learned.

By taking these steps, the RTE helps create a dynamic and collaborative environment where members can deepen their understanding of DevOps, leading to improved practices and outcomes across the Agile Release Train.

NEW QUESTION # 88

Product Management wants to prioritize a list of Features likely to be planned in the up-coming Program Increment (PI) meeting. What should Product Management use as the denominator of the weighted shortest job first calculation?

- **A. Job size based on relative estimation**
- B. Feature size expressed in story points
- C. The T-shirt sizes for each of the Features
- D. The actual business value of each Feature

Answer: A

Explanation:

When Product Management wants to prioritize a list of Features likely to be planned in the upcoming Program Increment (PI) meeting, they should use the job size based on relative estimation as the denominator of the Weighted Shortest Job First (WSJF) calculation. This approach helps in effectively ranking the features based on their size and estimated effort.

NEW QUESTION # 89

Which two items should be kept under version control? (Choose two.)

- A. Weighted shortest job first outcomes
- **B. Configuration Items**
- C. Archived User Stories
- **D. Test data**
- E. Scrum of scrum results

Answer: B,D

NEW QUESTION # 90

Which statement is true about scrum?

- A. It is a Lean system engineering technique
- B. It is a set of technical software practices
- C. It is a team-based framework
- D. It is an ideal method for static design requirements

Answer: C

Explanation:

Scrum is indeed a team-based framework used to implement Agile development. The key characteristics of Scrum include its use of cross-functional teams, iterative development cycles called sprints, and regular reflection and adaptation sessions. It is designed to accommodate changes in requirements and encourages close collaboration between the development team and stakeholders to deliver the highest value product increments¹.

In the context of SAFe, Scrum is integrated into the framework as one of the primary methods for Agile teams to manage their work. SAFe expands upon the Scrum framework by providing additional roles, events, and artifacts to support the coordination and alignment of multiple teams within an Agile Release Train (ART). This ensures that teams work together effectively towards common objectives, facilitating the delivery of large-scale solutions in an enterprise environment¹.

The Release Train Engineer (RTE) plays a crucial role in this process by facilitating ART events and processes, supporting teams in delivering value, and driving relentless improvement. The RTE helps to ensure that the Scrum framework is applied consistently across teams and that the principles of Lean and Agile are upheld within the ART¹.

NEW QUESTION # 91

What are two examples of team-level events? (Choose two.)

- A. Backlog refinement
- B. System Demo
- C. Daily stand-up
- D. Program Increment Planning

Answer: C

Explanation:

Backlog refinement and daily stand-up are both team-level events within the SAFe framework.

* Backlog refinement is a recurring event for Agile teams where team members collaborate to clarify and understand backlog items, ensuring that the backlog remains populated with items that are ready to be pulled into upcoming iterations¹.

* Daily stand-up is a short, time-boxed event for the Agile team that happens at the start of each day to synchronize activities and create a plan for the next 24 hours. This meeting is an opportunity for team members to discuss what they did the day before, what they plan to do today, and any impediments they are facing¹.

Both of these events are crucial for maintaining the flow of value through continuous delivery and are consistent with the principles of Lean and Agile found in the SAFe framework. They are designed to foster better communication, collaboration, and transparency among team members, which are key aspects of the SAFe core values¹.
