Snowflake ARA-C01 Certification Test Questions - ARA-C01 Hot Questions

P.S. Free & New ARA-C01 dumps are available on Google Drive shared by ValidBraindumps: https://drive.google.com/open?id=1NNnmpYsCX8D7GGy7UWVJ9CV-rJNHOzQm

The downloading process is operational. It means you can obtain ARA-C01 quiz torrent within 10 minutes if you make up your mind. Do not be edgy about the exam anymore, because those are latest ARA-C01 exam torrent with efficiency and accuracy. You will not need to struggle with the exam. Besides, there is no difficult sophistication about the procedures, our latest ARA-C01 Exam Torrent materials have been in preference to other practice materials and can be obtained immediately.

Snowflake ARA-C01 certification exam is a globally recognized certification that demonstrates a candidate's advanced proficiency in Snowflake architecture, data modeling, and performance optimization. SnowPro Advanced Architect Certification certification is highly valued in the industry and provides a competitive advantage to individuals who hold it. The Snowflake ARA-C01 Certification Exam is an excellent way for Snowflake architects to demonstrate their expertise and advance their careers in the field of data warehousing.

ARA-C01 Hot Questions - New ARA-C01 Braindumps

To know well your level of ARA-C01 Exam Preparation, we offer you the online test engine version which is an exam simulation to

help you in knowing your week point in ARA-C01 practice test and therefore provide an opportunity to fulfill your deficiencies prior to Snowflake real exam. Once there are latest versions released, we will send it to your email immediately.

Snowflake ARA-C01 certification exam is designed to validate the advanced skills and knowledge of individuals in designing and implementing complex Snowflake data warehousing solutions. SnowPro Advanced Architect Certification certification exam is intended for Snowflake architects who have experience in designing and implementing Snowflake solutions in a variety of environments. The Snowflake ARA-C01 Certification Exam is a challenging exam that requires a good understanding of Snowflake architecture, data modeling, and performance optimization.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q137-Q142):

NEW QUESTION # 137
An Architect needs to improve the performance of reports that pull data from multiple Snowflake tables, join, and then aggregate the data. Users access the reports using several dashboards. There are performance issues on Monday mornings between 9:00am-11:00am when many users check the sales reports.
The size of the group has increased from 4 to 8 users. Waiting times to refresh the dashboards has increased significantly. Currently this workload is being served by a virtual warehouse with the following parameters:
AUTO-RESUME = TRUE AUTO_SUSPEND = 60 SIZE = Medium
What is the MOST cost-effective way to increase the availability of the reports?

- A. Increase the warehouse to size Large and set auto_suspend = 600.
- B. Use materialized views and pre-calculate the data.
- C. Use a multi-cluster warehouse in maximized mode with 2 size Medium clusters.
- D. Use a multi-cluster warehouse in auto-scale mode with 1 size Medium cluster, and set min_cluster_count = 1 and max_cluster_count = 4.

Answer: D

Explanation:
The most cost-effective way to increase the availability and performance of the reports during peak usage times, while keeping costs under control, is to use a multi-cluster warehouse in auto-scale mode. Option D suggests using a multi-cluster warehouse with 1 size Medium cluster and allowing it to auto-scale between 1 and 4 clusters based on demand. This setup ensures that additional computing resources are available when needed (e.g., during Monday morning peaks) and are scaled down to minimize costs when the demand decreases. This approach optimizes resource utilization and cost by adjusting the compute capacity dynamically, rather than maintaining a larger fixed size or multiple clusters continuously.
Reference: Snowflake's official documentation on managing warehouses and using auto-scaling features.

NEW QUESTION # 138
Which feature provides the capability to define an alternate cluster key for a table with an existing cluster key?

- A. External table
- B. Materialized view
- C. Result cache
- D. Search optimization

Answer: B

Explanation:
A materialized view is a feature that provides the capability to define an alternate cluster key for a table with an existing cluster key. A materialized view is a pre-computed result set that is stored in Snowflake and can be queried like a regular table. A materialized view can have a different cluster key than the base table, which can improve the performance and efficiency of queries on the materialized view. A materialized view can also support aggregations, joins, and filters on the base table data. A materialized view is automatically refreshed when the underlying data in the base table changes, as long as the AUTO_REFRESH parameter is set to true1.
Materialized Views | Snowflake Documentation

NEW QUESTION # 139

A user has the appropriate privilege to see unmasked data in a column.
If the user loads this column data into another column that does not have a masking policy, what will occur?

- A. Unmasked data will be loaded into the new column but only users with the appropriate privileges will be able to see the unmasked data.
- B. Masked data will be loaded into the new column.
- C. Unmasked data will be loaded in the new column.
- D. Unmasked data will be loaded into the new column and no users will be able to see the unmasked data.

Answer: C

NEW QUESTION # 140
An Architect has been asked to clone schema STAGING as it looked one week ago, Tuesday June 1st at 8:00 AM, to recover some objects.
The STAGING schema has 50 days of retention.
The Architect runs the following statement:
CREATE SCHEMA STAGING_CLONE CLONE STAGING at (timestamp => '2021-06-01 08:00:00'); The Architect receives the following error: Time travel data is not available for schema STAGING. The requested time is either beyond the allowed time travel period or before the object creation time.
The Architect then checks the schema history and sees the following:
CREATED_ON|NAME|DROPPED_ON
2021-06-02 23:00:00 | STAGING | NULL
2021-05-01 10:00:00 | STAGING | 2021-06-02 23:00:00
How can cloning the STAGING schema be achieved?

- A. Cloning cannot be accomplished because the STAGING schema version was not active during the proposed Time Travel time period.
- B. Modify the statement: CREATE SCHEMA STAGING_CLONE CLONE STAGING at (timestamp => '2021-05-01 10:00:00');
- C. Undrop the STAGING schema and then rerun the CLONE statement.
- D. Rename the STAGING schema and perform an UNDROP to retrieve the previous STAGING schema version, then run the CLONE statement.

Answer: D

NEW QUESTION # 141
Bytes spilled to remote storage in query profile indicates volume of data spilled to remote disk

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 142
