OCPE Category-7A-General-and-Household-Pest-Control Reliable Test Practice, Valid Braindumps Category-7A-General-and-Household-Pest-Control Questions

DumpsReview is aware that in today's routines many Pesticide Applicator Category 7A General and Household Pest Control Exam Category-7A-General-and-Household-Pest-Control exam candidates are under time pressures. Therefore, DumpsReview offers OCPE Exams questions in three formats that are Category-7A-General-and-Household-Pest-Control desktop practice test software, web-based practice test, and PDF dumps. These formats of our Pesticide Applicator Category 7A General and Household Pest Control Exam Category-7A-General-and-Household-Pest-Control updated exam study material give you multiple training options so that you can meet your OCPE Category-7A-General-and-Household-Pest-Control exam preparation objectives. Keep reading because we have discussed the specifications of DumpsReview Category-7A-General-and-Household-Pest-Control exam questions preparation material in three user-friendly formats.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

Perimeter spraying as defined in the TEMPRID label outdoor section is defined as:

- A. Prohibiting wall spraying and limits band ground width to 3 feet
- **B. Two to three feet up the walls and a band up to 10 feet wide along the ground**
- C. A maximum of one foot up the walls and a band one foot along the ground

Answer: B

Explanation:

The TEMPRID SC label defines perimeter spraying for outdoor applications as treating two to three feet up the walls of a structure and a band up to 10 feet wide along the ground surrounding the structure. This ensures coverage of areas where pests like earwigs or ticks may enter or harbor. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 5: Pesticide Application) aligns with this standard for perimeter treatments. Option A (one foot up and one foot along) is too limited and not per the label. Option C (prohibiting wall spraying) is incorrect, as the label explicitly allows wall spraying up to 2-3 feet.

NEW QUESTION # 60

Written notification for single-family residences must include the:

- A. Full pesticide label directions
- **B. Exact date of application**
- C. Name of the pesticide used

Answer: B

Explanation:

For single-family residences, NJDEP regulations (N.J.A.C. 7:30-9.13) require written notification to include the exact date of application to inform residents of when the treatment will occur. Option B (full pesticide label directions) is not required in the notification, though the label must be followed.

Option C (name of the pesticide) is typically included in post-application notices but is not mandatory in the pre-application written notification.

NEW QUESTION # 61

Carpenter ant control is obtained by the elimination of:

- A. Inside colonies and perimeter control
- **B. Both inside and near building colonies**
- C. The outside colony

Answer: B

Explanation:

Carpenter ants often have multiple colonies, including satellite colonies inside structures and parent colonies outside near the building. Effective control, as outlined in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Ants), requires eliminating both inside and near building colonies to prevent reinfestation. Option B (outside colony only) is insufficient, as satellite colonies inside will persist. Option C (inside colonies and perimeter control) is part of the strategy but does not address the parent colony outside.

NEW QUESTION # 62

Which is the correct choice for the following application situation using TEMPRID?

For an outdoor application for ticks, the:

- A. 7A category does not cover treatment for ticks outdoors; you would need a 7B category certification
- **B. Suggested rate of application is 0.54 fluid ozs. per 1000 sq. ft.**
- C. Suggested rate of application is 0.075% per 1000 sq. ft.

Answer: B

Explanation:

TEMPRID SC (a common pesticide for Category 7A) is labeled for outdoor tick control. The label specifies a rate of 0.54 fl. oz. per 1000 sq. ft. for outdoor perimeter applications, which aligns with the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) for tick control. Option A is incorrect because Category 7A does cover outdoor tick treatments adjacent to structures (see Question 63). Option B (0.075% per 1000 sq. ft.) refers to a concentration rate for indoor applications, not the volume rate for outdoor use.

NEW QUESTION # 63

Notification requirements for multi-family residents require:

- A. The post-application decal notice in each unit
- **B. Decal notification in all entryways to the building**
- C. A decal notice in each unit prior to the application

Answer: B

Explanation:

For multi-family residences, NJDEP regulations (N.J.A.C. 7:30-9.13) require decal notification in all entryways to the building to inform residents of pesticide applications. This ensures visibility for all tenants without requiring individual unit notices. Option A (decal in each unit prior) is not required, though advance notice to tenants is. Option C (post-application decal in each unit) is impractical and not mandated; post-application notices are typically posted in common areas.

NEW QUESTION # 64

.....

In addition to the advantages of high quality, our Category-7A-General-and-Household-Pest-Control study materials also provide various versions. In order to meet your personal habits, you can freely choose any version within PDF, APP or PC version. Among them, the PDF version is most suitable for candidates who prefer paper materials, because it supports printing.
