

# New 1z0-1104-25 Latest Mock Test 100% Pass | Professional 1z0-1104-25: Oracle Cloud Infrastructure 2025 Security Professional 100% Pass

What's more, part of that Real4exams 1z0-1104-25 dumps now are free: <https://drive.google.com/open?id=1gXjhKpXFVS4ul92Av9g4iptlQI8S0mC2>

1z0-1104-25 dump at Real4exams are always kept up to date. Every addition or subtraction of 1z0-1104-25 exam questions in the exam syllabus is updated in our brain dumps instantly. Practice on real 1z0-1104-25 exam questions and we have provided their answers too for your convenience. If you put just a bit of extra effort, you can score the highest possible score in the Real 1z0-1104-25 Exam because our 1z0-1104-25 exam preparation dumps are designed for the best results.

## Oracle 1z0-1104-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Protecting Data: This section of the exam measures the skills of Cloud Security Professionals and highlights data security practices in OCI. It tests knowledge of using the Key Management Service for encryption keys, managing secrets in the OCI Vault, and applying features of OCI Data Safe to ensure sensitive data remains protected.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Implementing Identity and Access Management (IAM): This section of the exam measures skills of OCI Administrators and focuses on identity and access controls. It covers IAM domains, users, groups, and compartments, as well as the use of IAM policies to manage access to resources. Candidates are also tested on configuring dynamic groups, network sources, and tag-based access control, along with managing MFA, sign-on policies, and activity monitoring.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Protecting Infrastructure - Network and Applications:</b> This section of the exam measures the skills of Cloud Security Professionals and covers methods for securing networks and applications on OCI. Topics include network security groups, firewalls, and security lists, while also focusing on the use of load balancers for availability. The section further addresses the configuration of OCI certificates and web application firewalls to strengthen infrastructure security.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Implementing OS and Workload Protection:</b> This section of the exam measures the skills of OCI Administrators and looks at securing workloads and operating systems. It includes the use of OCI Bastion for time-limited access, vulnerability scanning of hosts and containers, and the use of OS management for automated updates. The goal is to ensure that workloads remain resilient and well-protected.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>OCI Security Introduction:</b> This section of the exam measures the skills of Cloud Security Professionals and covers the basics of security in Oracle Cloud Infrastructure. It introduces the shared security responsibility model, the core principles of security design, and the use of foundational security services to secure deployments on OCI.</li> </ul>

## Oracle 1z0-1104-25 Realistic Latest Mock Test Pass Guaranteed

Firstly, our company always feedbacks our candidates with highly-qualified 1z0-1104-25 study guide and technical excellence and continuously developing the most professional 1z0-1104-25 exam materials. Secondly, our 1z0-1104-25 study materials persist in creating a modern service oriented system and strive for providing more preferential activities for your convenience. Come and buy our 1z0-1104-25 Exam Materials, you will get more than you can imagine!

## Oracle Cloud Infrastructure 2025 Security Professional Sample Questions (Q36-Q41):

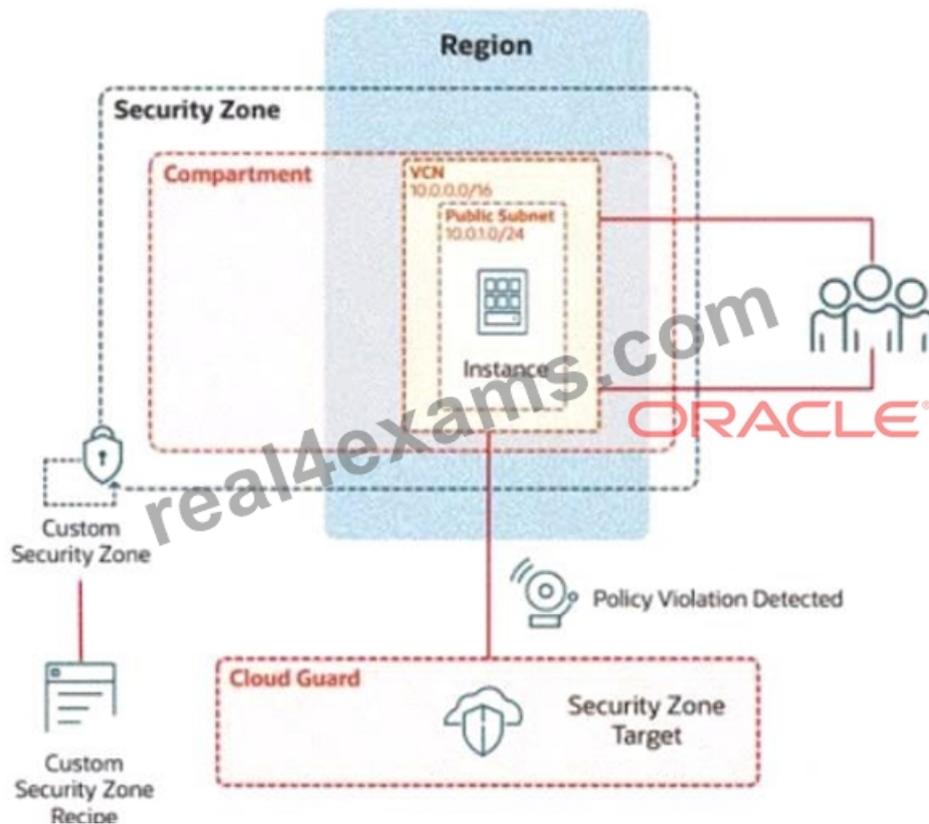

### NEW QUESTION # 36

#### Challenge 2

In deploying a new application, a cloud customer needs to reflect different security postures. If a security zone is enabled with the Maximum Security Zone recipe, the customer will be unable to create or update a resource in the security zone if the action violates the attached Maximum Security Zone policy.

As an application requirement, the customer requires a compute instance in the public subnet. You therefore, need to configure Custom Security Zones that allow the creation of compute instances in the public subnet.

Review the architecture diagram, which outlines the resources you'll need to address the requirement:

Preconfigured

To complete this requirement, you are provided with the following:

Access to an OCI tenancy, an assigned compartment, and OCI credentials

Required IAM policies

Task 5: Provision a Compute Instance

Provision a compute instance in the IAD-SP-PBT-PUBSNET-01 public subnet, where:

Name IAD-SP-PBT-1-VM-01

image: Oracle Linux 8

Shape VM: Standard, A1, Flex

Enter the OCID of the created compute instance in the text box below.

**Answer:**

Explanation:

See the solution below in Explanation.

Explanation:

To provision a compute instance named IAD-SP-PBT-1-VM-01 in the IAD-SP-PBT-PUBSNET-01 public subnet with the specified configuration (Oracle Linux 8 image, VM Standard A1 Flex shape), follow these steps based on the Oracle Cloud Infrastructure (OCI) Compute documentation.

Step-by-Step Solution for Task 5: Provision a Compute Instance

\* Log in to the OCI Console:

\* Use your OCI credentials to log in to the OCI Console (<https://console.us-ashburn-1.oraclecloud.com>).

\* Ensure you have access to the assigned compartment.

\* Navigate to Compute Instances:

\* From the OCI Console, click the navigation menu (hamburger icon) on the top left.

\* Under Compute, select Instances.

\* Create a New Compute Instance:

\* Click the Create Instance button.

\* Configure the Instance Details:

\* Name: Enter IAD-SP-PBT-1-VM-01.

\* Compartment: Select the assigned compartment.

\* Placement: Choose the availability domain (e.g., AD-1) based on your region's availability.

\* Select the Image:

\* Under Image and Shape, click Change Image.

- \* Select Oracle Linux 8 from the platform images list.
  - \* Click Select Image.
  - \* Choose the Shape:
  - \* Click Change Shape.
  - \* Select VM Standard category.
  - \* Choose A1 Flex from the shape options.
  - \* Configure the OCPUs (e.g., 1 OCPU) and memory (e.g., 6 GB) as needed for A1 Flex, then click Select Shape.
  - \* Configure Networking:
  - \* Under Networking, ensure the Virtual Cloud Network is set to IAD-SP-PBT-VCN-01.
  - \* Set the Subnet to IAD-SP-PBT-PUBSNET-01 (public subnet with CIDR 10.0.1.0/24).
  - \* Enable Assign a public IPv4 address to allow external connectivity.
  - \* Leave the default security list or assign a custom one if configured previously.
  - \* Set Up SSH Access:
  - \* Under Add SSH Keys, either:
    - \* Upload your public SSH key file, or
    - \* Paste your public SSH key manually.
  - \* This ensures you can access the instance via SSH.
  - \* Launch the Instance:
  - \* Click Create to provision the compute instance.
  - \* Wait for the instance to reach the Running state (this may take a few minutes).
  - \* Note the Instance OCID:
  - \* Once the instance is running, go to the instance details page for IAD-SP-PBT-1-VM-01.
  - \* Copy the OCID displayed (e.g., ocid1.instance.oc1..<unique\_string>).
- OCID of the Created Compute Instance
- \* Enter the OCID of the created compute instance (IAD-SP-PBT-1-VM-01) into the text box. The exact OCID will be available after Step 9 (e.g., ocid1.instance.oc1..<unique\_string>).
- Notes
- \* Ensure the security zone IAD\_SAP-PBT-CSZ-01 and its associated recipe IAD-SP-PBT-CSP-01 allow compute instance creation in the public subnet (10.0.1.0/24).
  - \* Verify network connectivity by testing SSH access using the public IP assigned to the instance.

### NEW QUESTION # 37

Within OCI IAM identity domains, the AD Bridge component serves a critical role. How does the AD Bridge functionality specifically enhance Identity and Access Management (IAM) practices?

- A. It simplifies user provisioning by enabling automated synchronization of user accounts and group memberships from an existing Microsoft Active Directory (AD) environment.
- B. It directly integrates with OCI MFA providers, allowing for seamless enforcement of MFA for users authenticated through AD credentials.
- C. It facilitates delegated administration, allowing authorized AD users to manage specific resources within the OCI identity domain.
- D. It strengthens access security by providing an additional layer of authentication through AD integration.

**Answer: A**

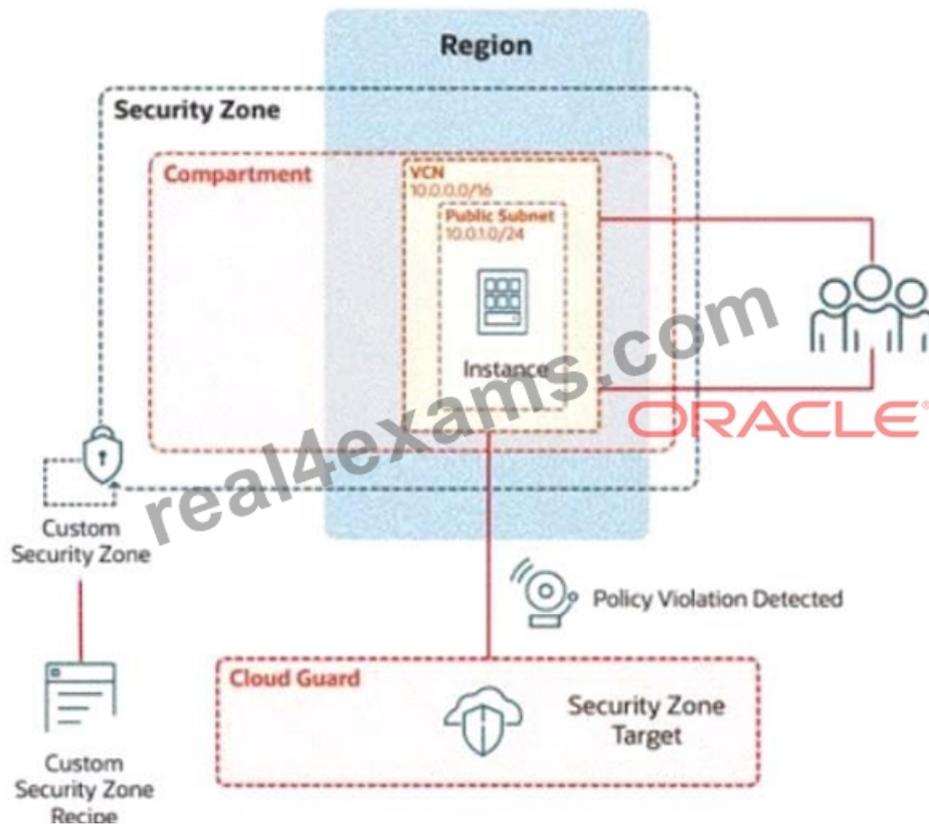

### NEW QUESTION # 38

Challenge 2 - Task 1

In deploying a new application, a cloud customer needs to reflect different security postures. If a security zone is enabled with the Maximum Security Zone recipe, the customer will be unable to create or update a resource in the security zone if the action violates the attached Maximum Security Zone policy.

As an application requirement, the customer requires a compute instance in the public subnet. You therefore, need to configure Custom Security Zones that allow the creation of compute instances in the public subnet.

Review the architecture diagram, which outlines the resources you'll need to address the requirement:

Preconfigured

To complete this requirement, you are provided with the following:

Access to an OCI tenancy, an assigned compartment, and OCI credentials

Required IAM policies

Task 4: Create a Public Subnet

Create a public subnet named IAD-SP-PBT-PUBSNET-01, within the VCN IAD-SP-PBT-VCN-01 use a CIDR block of 10.0.1.0/24 and configure the subnet to use the internet Gateway See the solution below in Explanation.

**Answer:**

Explanation:

To create a public subnet named IAD-SP-PBT-PUBSNET-01 within the VCN IAD-SP-PBT-VCN-01 using a CIDR block of 10.0.1.0/24 and configure it to use the Internet Gateway, follow these steps based on the Oracle Cloud Infrastructure (OCI) Networking documentation.

Step-by-Step Solution for Task 4: Create a Public Subnet

\* Log in to the OCI Console:

\* Use your OCI credentials to log in to the OCI Console (<https://console.us-ashburn-1.oraclecloud.com>).

\* Ensure you have access to the assigned compartment.

\* Navigate to Virtual Cloud Networks:

\* From the OCI Console, click the navigation menu (hamburger icon) on the top left.

\* Under Networking, select Virtual Cloud Networks.

\* Select the VCN:

\* Locate and click on the VCN named IAD-SP-PBT-VCN-01 created in Task 3.

\* Under Resources, select Subnets.

\* Create a New Subnet:

\* Click the Create Subnet button.

\* Configure the Subnet Details:

\* Name: Enter IAD-SP-PBT-PUBSNET-01.

\* Compartment: Ensure it is set to the assigned compartment.

\* Subnet Type: Select Public Subnet.

\* CIDR Block: Enter 10.0.1.0/24.

\* Route Table: Select the default route table associated with the VCN (ensure it includes a route to the Internet Gateway with destination 0.0.0.0/0).

\* Subnet Access: Select Public Subnet and ensure the Internet Gateway is associated.

- \* DHCP Options: Leave as default or customize if required.
- \* Security List: Use the default security list or create a new one with appropriate ingress/egress rules (e.g., allow TCP port 22 for SSH and all egress traffic).
- \* Associate the Internet Gateway:
- \* Verify that the subnet is configured to route traffic through the Internet Gateway. This is automatically handled if you selected the public subnet option and the VCN's route table is correctly set (as configured in Task 3).
- \* If needed, edit the route table for the subnet to ensure a rule exists:
- \* Destination CIDR Block: 0.0.0.0/0
- \* Target Type: Internet Gateway
- \* Target: Select the Internet Gateway associated with IAD-SP-PBT-VCN-01.
- \* Create the Subnet:
- \* Click Create to provision the subnet.
- \* Once created, the subnet will be listed under the VCN's subnets.
- \* Verify the Configuration:
- \* Go to the subnet details page for IAD-SP-PBT-PUBSNET-01.
- \* Confirm the CIDR block is 10.0.1.0/24 and that it is a public subnet with Internet Gateway access.

#### Notes

- \* Ensure the CIDR block 10.0.1.0/24 does not overlap with existing subnets in the VCN (10.0.0.0/16, including 10.0.10.0/24 from Task 3).
- \* The Internet Gateway association relies on the route table configuration from Task 3. If it's missing, update the route table as described in Step 6.

#### NEW QUESTION # 39

"A programmer is developing a Node.js application which will run on a Linux server on their on-premises data center. This application will access various Oracle Cloud Infrastructure (OCI) services using OCI SDKs.

What is the secure way to access OCI services with OCI Identity and Access Management (IAM)?

- A. Create a new OCI IAM user, add the user to a group associated with a policy that grants the desired permissions to OCI services. In the on-premises Linux server, generate the keypair used for signing API requests and upload the public key to the IAM user.
- B. Create a new OCI IAM user associated with a dynamic group and a policy that grants the desired permissions to OCI services. Add the on-premises Linux server in the dynamic group.
- C. Create a new OCI IAM user, add the user to a group associated with a policy that grants the desired permissions to OCI services. In the on-premises Linux server, add the user name and password to a file used by Node.js authentication.
- D. Create an OCI IAM policy with appropriate permissions to access the required OCI services and assign the policy to the on-premises Linux server."

**Answer: A**

#### NEW QUESTION # 40

Which are the essential components to create a rule for the Oracle Cloud Infrastructure (OCI) Events Service?

- A. Install Key and Actions
- B. Install Key and Service Connector
- C. Rule Conditions and Management Agent Cloud Service
- D. Rule Conditions and Actions

**Answer: D**

#### NEW QUESTION # 41

.....

Real4exams is the leader in the latest Oracle 1z0-1104-25 Exam Certification and exam preparation provider. Our resources are constantly being revised and updated, with a close correlation. If you prepare Oracle 1z0-1104-25 certification, you will want to begin your training, so as to guarantee to pass your exam. As most of our exam questions are updated monthly, you will get the best resources with market-fresh quality and reliability assurance.
