We will continue to pursue our passion for better performance and human-centric technology of latest Network-Security-Essentials quiz prep. And we guarantee you to pass the exam for we have confidence to make it with our technological strength. A good deal of researches has been made to figure out how to help different kinds of candidates to get the Network-Security-Essentials certification. We treasure time as all customers do. Therefore, fast delivery is another highlight of our laTest Network-Security-Essentials Quiz prep. We are making efforts to save your time and help you obtain our product as quickly as possible. We will send our Network-Security-Essentials exam guide within 10 minutes after your payment. You can check your mailbox ten minutes after payment to see if our Network-Security-Essentials exam guide are in.

If you want to pass your exam just one time, then our Network-Security-Essentials exam torrent will be your best choice. We can help you pass your exam just one time, and if you fail the exam in your first attempt after using Network-Security-Essentials exam torrent, we will give you refund, and no other questions will asked. Moreover, Network-Security-Essentials Exam Braindumps of us are high-quality, and we have helped lots of candidates pass the exam successfully. We have received many good feedbacks from our customers. We offer you online and offline chat service stuff, if you have any questions about Network-Security-Essentials exam torrent, you can consult them.

Test Network-Security-Essentials Collection Pdf & Test Network-Security-Essentials Questions Vce

In order to provide the most effective Network-Security-Essentials exam materials which cover all of the current events for our customers, a group of experts in our company always keep an close eye on the changes of the Network-Security-Essentials exam, and then will compile all of the new key points as well as the latest types of exam questions into the new version of our Network-Security-Essentials training engine. Do not lose the wonderful chance to advance with times. Just come and have a try on our Network-Security-Essentials study questions!

WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q17-Q22):

NEW QUESTION # 17

There is an Internet outage at your primary ISP, but the Internet connection from the Firebox has not failed over to your backup ISP. Both ISP connectors are correctly cabled and have active physical links. What could cause this problem? (Select two.)

- A. In the Multi-WAN settings, the Gradual Fallback option is enabled
- B. The Link Monitor target for the primary ISP interface is set to ping the default gateway, but the outage is further upstream
- C. In the Multi-WAN settings, the Immediate Fallback option is enabled
- D. The secondary IP addresses are not defined for the backup ISP interface
- E. Link Monitor target for the backup ISP interface is not responding

Answer: B,E

Explanation:

* Link Monitor Target for Backup ISP: If the backup ISP's Link Monitor target is not responsive, the Firebox will not initiate a failover, as it interprets the backup connection as inactive or faulty.

* Primary ISP Link Monitor Configuration: When the Link Monitor for the primary ISP only checks the default gateway, it may not detect issues occurring further upstream. If the outage is beyond the gateway, failover will not activate because the monitor assumes the link is still valid.

These settings are critical to ensuring proper Multi-WAN failover behavior in case of ISP issues.

NEW QUESTION # 18

A Firebox has an external IP address of 203.0.113.100. A public web server with the IP address 10.0.1.80 is connected to a Firebox internal network. What is the effect of the policy shown in this image? (Select one.)

- A. Allows users on the Internet and the 10.0.1.0/24 network to use the internal IP address of the Firebox to connect to the web server
- B. Applies dynamic NAT to the 10.0.1.80 IP address of the web server to allow inbound connections
- C. Allows users on the Internet and the 10.0.1.0/24 network to use the external IP address of the Firebox to connect to the web server
- D. Allows users on the Internet to connect to the 10.0.1.80 IP address of the web server

Answer: C

Explanation:

In the policy configuration shown in the image:

* From Section: It specifies "Any-External" and 10.0.1.0/24, indicating that this policy applies to traffic from any external source (Internet users) as well as from devices on the internal network 10.0.1.0/24.

* To Section: The destination specifies a public-facing IP address (203.0.113.100) that is statically NAT'd to the internal IP address of the web server (10.0.1.80). This means external users and internal users can access the web server using the Firebox's external IP.

* Effect of Static NAT: The policy uses Static NAT to map the Firebox's external IP address to the web server's internal IP address, allowing inbound connections to reach the server. This setup provides consistent access for both external and internal users via the same public IP address.

This configuration effectively enables both Internet users and users within the specified internal network (10.0.1.0/24) to connect to the web server using the Firebox's external IP, making Option D the correct answer.

NEW QUESTION # 19

Your network was the target of an attack last week. You want to learn more about the source of the attack. What monitoring tools can you use to get started? (Select one.)

- A. WatchGuard Log Catalog
- B. Discovery in Fireware Web UI
- C. FireWatch in Fireware Web UI
- **D. Log Search and reports in WatchGuard Cloud or Dimension**
- E. Traffic Monitor in Firebox System Manager

Answer: D

Explanation:

To investigate an attack and learn more about the source, Log Search and reports in WatchGuard Cloud or Dimension offer detailed logs and analytical reports. These tools provide historical data, allowing you to review traffic, pinpoint the source of the attack, and analyze patterns.

While other tools like Traffic Monitor or FireWatch offer real-time monitoring, they do not provide the in-depth historical analysis and reporting features required for post-incident investigation.

NEW QUESTION # 20

You want to create a branch office VPN virtual interface between a remote Firebox and your headquarters Firebox so the remote Firebox can send log data to a server at headquarters. For the log data to be sent from the remote Firebox over the VPN successfully, what BOVPN virtual interface setting must you configure? (Select one.)

- A. Perfect Forward Secrecy (PFS)
- **B. Virtual IP addresses**
- C. An IPSec certificate, instead of a Pre-shared key
- D. Dead Peer Detection (DPD)
- E. IKEv2 in the Phase 1 settings

Answer: B

Explanation:

To enable the remote Firebox to send log data to a server at headquarters through a Branch Office VPN (BOVPN) virtual interface, you must configure Virtual IP addresses. Virtual IPs enable devices on either end of the VPN tunnel to communicate as if they are on the same network, facilitating routing of log data from the remote Firebox to the log server located at headquarters.

Other options like IPSec certificates and IKEv2 are not specifically required for this configuration, though they can enhance security. Dead Peer Detection (DPD) and Perfect Forward Secrecy (PFS) are useful for maintaining VPN stability and security but are not directly necessary for enabling log transmission.

NEW QUESTION # 21

What steps must you take to send log messages from a Firebox to WatchGuard Cloud? (Select two.)

- **A. Use the WatchGuard Cloud Add Device wizard to add the Firebox to WatchGuard Cloud**
- B. Define an Authentication Key that all your Fireboxes use to communicate with WatchGuard Cloud
- **C. Enable WatchGuard Cloud in the Firebox configuration**
- D. Add the FQDN of your WatchGuard Cloud account as a Log Server on the Firebox
- E. Configure Dimension to synchronize log messages with WatchGuard Cloud

Answer: A,C

Explanation:

* Enable WatchGuard Cloud in Firebox Configuration: To send log messages to WatchGuard Cloud, you need to activate WatchGuard Cloud integration within the Firebox's configuration settings. This action prepares the device to communicate with

WatchGuard Cloud and transfer log data.

* Use the WatchGuard Cloud Add Device Wizard: The Add Device wizard in WatchGuard Cloud is used to register and connect the Firebox to WatchGuard Cloud. This wizard guides administrators through the setup and ensures that the device is correctly configured to send logs and other data to the cloud.

These steps are required to establish connectivity and ensure that log messages are sent to WatchGuard Cloud.

Other options, such as adding an FQDN or configuring Dimension synchronization, are not necessary for this task.

NEW QUESTION # 22

.....

With limited time for your preparation, many exam candidates can speed up your pace of making progress. Our Network-Security-Essentials practice materials will remedy your faults of knowledge understanding. Many customers get manifest improvement and lighten their load. As we know, some people failed the exam before, and lost confidence in this agonizing exam before purchasing Network-Security-Essentials Training Materials. We are here divide grieves with you. You can abandon the time-consuming thought from now on. In contrast, they will inspire your potential without obscure content to feel. After getting our Network-Security-Essentials exam prep, you will not live under great stress during the exam period.
