

[2026] Microsoft AZ-400 Questions: Tips to Get Results Effortlessly

Microsoft Azure DevOps Engineer (AZ-400) Exam Dumps & Questions 2026

Microsoft Azure DevOps Engineer (AZ-400) Exam Questions 2026 Contains 750+ exam questions to pass the exam in first attempt.

SkillCertPro offers real exam questions for practice for all major IT certifications.

- For a full set of 750 questions. Go to <https://skillcertpro.com/product/microsoft-azure-devops-solutions-az-400-practice-exam-set/>
- SkillCertPro offers detailed explanations to each question which helps to understand the concepts better.
- It is recommended to score above 85% in SkillCertPro exams before attempting a real exam.
- SkillCertPro updates exam questions every 2 weeks.
- You will get life time access and life time free updates
- SkillCertPro assures 100% pass guarantee in first attempt.

Below are the free 10 sample questions.

Question 1:

You use a Git repository in Azure Repos to manage the source code of a web application. Developers commit changes directly to the master branch.

You need to implement a change management procedure that meets the following requirements:

The master branch must be protected, and new changes must be built in the feature branches first.

Changes must be reviewed and approved by at least one release manager before each merge.

Changes must be brought into the master branch by using pull requests.

What should you configure in Azure Repos?

A. branch policies of the master branch

P.S. Free & New AZ-400 dumps are available on Google Drive shared by Fast2test: <https://drive.google.com/open?id=1R3gvErz3TancfK3QDgcWIL9ezokd1J9>

It is generally acknowledged that candidates who earn the Designing and Implementing Microsoft DevOps Solutions (AZ-400) certification ultimately get high-paying jobs in the tech market. Success in the Designing and Implementing Microsoft DevOps Solutions (AZ-400) exam not only validates your skills but also helps you get promotions. To pass the Designing and Implementing Microsoft DevOps Solutions test in a short time, you must prepare with AZ-400 Exam Questions that are real and updated. Without studying with AZ-400 actual questions, candidates fail and waste their time and money.

Microsoft AZ-400 Exam Overview:

Certification Vendor:	Microsoft
Exam Name:	Designing and Implementing Microsoft DevOps Solutions
Exam Number:	AZ-400
Real Exam Qty:	40-60
Related Certifications:	Microsoft Certified: Azure DevOps Engineer Expert
Available Languages:	English, Chinese (Simplified), Chinese (Traditional), French, German, Indonesian, Italian, Japanese, Korean, Portuguese (Brazil), Russian, Spanish
Passing Score:	700
Exam Duration:	100-120

Exam Format:	Multiple choice, Multiple response, Case studies, Drag and drop, Best answer, Build list, Active screen, Hot area
Exam Price:	\$165 USD
Certificate Validity Period:	1 year (subject to renewal requirements)
Sample Questions:	Microsoft AZ-400 Sample Questions
Exam Way:	Online (proctored) or at a Pearson VUE testing center
Pre Condition:	Candidates must have subject matter expertise working with people, processes, and technologies to continuously deliver business value. Recommended to have Azure Administrator or Azure Developer Associate certification.

Quiz 2026 Microsoft AZ-400: Designing and Implementing Microsoft DevOps Solutions Newest Exam Test

Individuals who work with Microsoft affiliations contribute the greater part of their energy working in their work spaces straightforwardly following accomplishing Designing and Implementing Microsoft DevOps Solutions certification. They don't get a lot of opportunity to spend on different exercises and regarding the Microsoft AZ-400 Dumps, they need assistance to scrutinize accessible.

What Topics Are Covered by Microsoft AZ-400?

The skills and knowledge that you need for AZ-400 can be gained by mastering the exam topics that the applicants have to cover for passing such a certification test. They include the following:

- Describing and Executing Continuous Integration;
- Proficiency in Managing Source Control;
- Developing an SRE Strategy;
- Creation of Security & Compliance Plan;
- Creation of Strategies for Instrumentation;
- Facilitating Communication & Collaboration.

These seven domains target to enhance a student's skills as a DevOps engineer. The first one is dedicated to the creation of strategies targeting instrumentation. Abilities to develop here include creating and executing logging and telemetry as well as integrating solutions for monitoring & logging. Thus, you have to be knowledgeable about CPU, Visual Studio App Center, Google Analytics, and Azure Monitor Application Insights.

The next objective covers the management of source control. A candidate's proficiency should reach high levels in the creation of a technique for present-day source control, planning and executing techniques for branching targeting the source code, configuring repositories, and integrating tools for source control. The knowledge of code reviews, Pull Requests, and GitHub will also be of immense help.

The third assessed portion takes cognizance of the fact that DevOps engineers need to know how to design a strategy directed at SRE (Site Reliability Engineering). This means that their studies should focus on creating an alerting strategy that is actionable, developing a strategy for predicting failure, and creating and executing a focused health check.

The fourth to include in the Microsoft AZ-400 exam is the topic targeting a strategy for continuous delivery and managing release. In this, candidates should establish themselves in the area of designing scripts as well as templates for deployment, executing an automation solution for orchestration, and planning an environment strategy for deployment.

The part that follows focuses on ensuring that there is a plan in place that provides security in addition to compliance. Targeted abilities include building a strategy for authentication and authorization, building a strategy for managing sensitive information, and developing security as well as compliance. Another area involves designing enforcement plans for governance.

For the sixth domain concentrated on describing and executing continuous integration, students get skills in designing automation for the build, developing a strategy for package management, and creating a strategy for managing application architecture. To study as well is how to execute strategies for the build and maintaining it, and creating a process that ensures builds are standardized across organizations.

The seventh and the final section for this AZ-400 test concerns facilitating collaboration and communication. The emphasis is on ensuring communication with stakeholders about information for positioning and release, generating process documentation for DevOps, and automating team member communication.

Microsoft AZ-400 certification exam is a sought-after credential for professionals in the field of DevOps. AZ-400 exam is designed for individuals who want to showcase their expertise in designing and implementing Microsoft DevOps solutions. Designing and Implementing Microsoft DevOps Solutions certification validates the candidate's knowledge and skills in various areas of DevOps such as continuous integration and delivery, infrastructure as code, monitoring and feedback, and more.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q175-Q180):

NEW QUESTION # 175

You need to implement Project4.
What should you do first?

- A. Add the MAINTAINER instruction in the Dockerfile file.
- B. Add a Copy and Publish Build Artifacts task to the build pipeline.
- C. Add the FROM instruction in the Dockerfile file.
- **D. Add a Docker task to the build pipeline.**

Answer: D

Explanation:

Scenario: Implement Project4 and configure the project to push Docker images to Azure Container Registry.

Project 4	Project4 will provide support for a build pipeline that creates a Docker image and pushes the image to the Azure Container Registry. Project4 will use an existing Dockerfile.
-----------	--

You use Azure Container Registry Tasks commands to quickly build, push, and run a Docker container image natively within Azure, showing how to offload your "inner-loop" development cycle to the cloud. ACR Tasks is a suite of features within Azure Container Registry to help you manage and modify container images across the container lifecycle.

NEW QUESTION # 176

You have an Azure DevOps organization that contains a project named Project1.
You need to create a published wiki in Project1.
What should you do first?

- A. Modify the Storage settings of Project1.
- B. Modify the Team configuration settings of Project1.
- **C. In Project1, create an Azure DevOps repository.**
- D. In Project1, create an Azure DevOps pipeline.

Answer: C

Explanation:

You must have enabled Azure Repos service for your project.

<https://docs.microsoft.com/en-us/azure/devops/project/wiki/publish-repo-to-wiki?view=azure-devops&tabs=browser>

NEW QUESTION # 177

You manage build pipelines and deployment pipelines by using Azure DevOps.
Your company has a team of 500 developers. New members are added continually to the team.
You need to automate the management of users and licenses whenever possible.
Which task must you perform manually?

- **A. procuring licenses**
- B. assigning entitlements
- C. modifying group memberships

- D. adding users

Answer: A

Explanation:

Explanatnion:

NEW QUESTION # 178

How should you configure the filters for the Project5 trigger? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Microsoft

Set a /folder1.

- branch filter to exclude
- branch filter to include
- path filter to exclude
- path filter to include

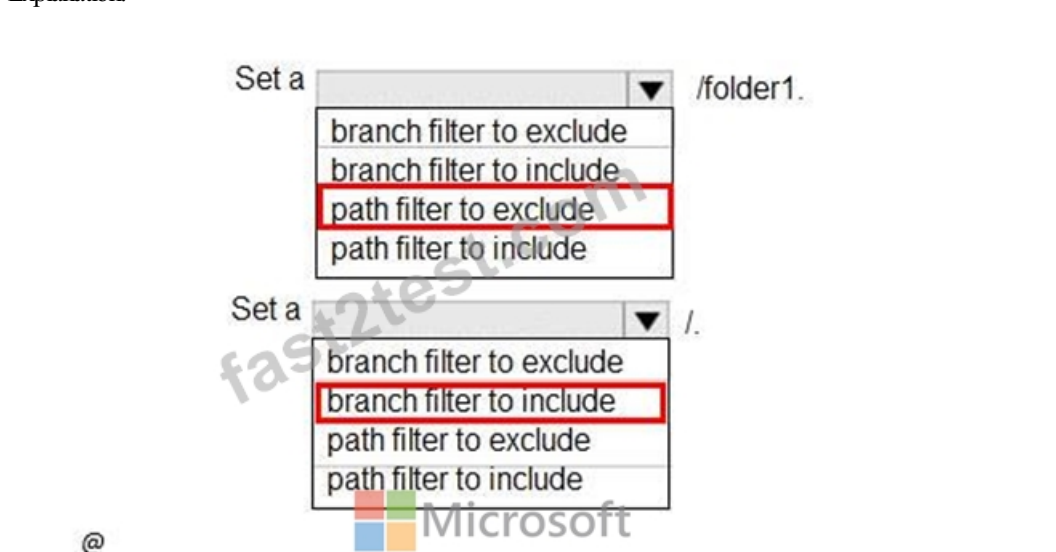

Set a /.

- branch filter to exclude
- branch filter to include
- path filter to exclude
- path filter to include

@

Answer:

Explanation:

Microsoft

Set a /folder1.

- branch filter to exclude
- branch filter to include
- path filter to exclude
- path filter to include

Set a /.

- branch filter to exclude
- branch filter to include
- path filter to exclude
- path filter to include

@

NEW QUESTION # 179

You are building an ASP.NET Core application.

You plan to create an application utilization baseline by capturing telemetry data.

You need to add code to the application to capture the telemetry data.

a. The solution must minimize the costs of storing the telemetry data.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A)

Add the <MaxTelemetryItemsPerSecond>5</MaxTelemetryItemsPerSecond> parameter to the ApplicationInsights.config file.

B)

C)

From the code of the application, enable adaptive sampling.

D)

Add the <InitialSamplingPercentage>90</InitialSamplingPercentage> parameter to the ApplicationInsights.config file.

E)

From the code of the application, add Azure Application Insights telemetry.

- A. Option E
- B. Option B
- C. Option C
- D. Option A
- E. Option D

Answer: A,B
