## Mule-Dev-301 Valid Exam Pattern - Practice Mule-Dev-301 Exams Free

You can easily download these formats of Salesforce Mule-Dev-301 actual dumps and use them to prepare for the Salesforce Mule-Dev-301 certification test. You don't need to enroll yourself in expensive Mule-Dev-301 Exam Training classes. With the Salesforce Mule-Dev-301 valid dumps, you can easily prepare well for the actual Salesforce Mule-Dev-301 exam at home.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q19-Q24):

### NEW QUESTION # 19

A healthcare customer wants to use hospital system data, which includes code that was developed using legacy tools and methods. The customer has created reusable Java libraries in order to read the data from the system. What is the most effective way to develop an API retrieve the data from the hospital system?

- A. Include the libraries writes deploying the code into the runtime
- **B. Install libraries in a local repository and refer to it in the pm.xml file**
- C. Refer to JAR files in the code
- D. Create the Java code in your project and invoice the data from the code

**Answer: B**

Explanation:

To develop an API that retrieves data from a hospital system using reusable Java libraries, the developer should install libraries in a local repository and refer to it in the pom.xml file. This way, the developer can use Maven to manage dependencies and invoke Java code from Mule applications using Java Module operations. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/java-module-reference#add-the-java-module-to-your-project> <https://docs.mulesoft.com/mule-runtime/4.3/java-module-reference#invoke-java->

code

#### NEW QUESTION # 20

Mule application A is deployed to CloudHub and is using Object Store v2. Mule application B is also deployed to CloudHub. Which approach can Mule application B use to remove values from Mule application A'S Object Store?

- **A. Object Store v2 REST API**
- B. CloudHub REST API
- C. Object Store Connector
- D. CloudHub Connector

**Answer: A**

Explanation:

To remove values from Mule application A's Object Store v2, Mule application B can use Object Store v2 REST API. This API allows performing operations on Object Store v2 resources using HTTP methods, such as GET, POST, PUT, and DELETE. Mule application B can use the DELETE method to remove values from Mule application A's Object Store v2 by specifying the object store ID and the key of the value to delete. Reference: <https://docs.mulesoft.com/object-store/osv2-apis>

#### NEW QUESTION # 21

Which pattern can a web API use to notify its client of state changes as soon as they occur?

- **A. HTTP Webhook**
- B. Schedule Event Publisher
- C. ETL data load
- D. Shared database trigger

**Answer: A**

Explanation:

A web API can use HTTP Webhook to notify its client of state changes as soon as they occur. A webhook is an HTTP callback that allows an API to send real-time notifications to another system or application when an event happens. The client registers a URL with the API where it wants to receive notifications, and then the API sends an HTTP request to that URL with information about the event. Reference: <https://docs.mulesoft.com/connectors/webhook/webhook-connector>

#### NEW QUESTION # 22

Two APIs are deployed to a two-node on-prem cluster. Due to a requirements change, the two APIs must communicate to exchange data asynchronously.

- **A. If the two APIs use the same domain, the VM Connector can be leveraged**
- B. Instead of using the VM Connector use <flow-ref>directly
- C. It is not possible to use the VM Connector since the APIs are running in a cluster mode and each mode has its own set of VM Queues
- D. The VM Connector is used to inter-application communication, so it is not possible to use the VM Connector

**Answer: A**

Explanation:

To communicate asynchronously between two APIs deployed to a two-node on-prem cluster, the developer can use the VM Connector if the two APIs use the same domain. The VM Connector allows passing messages between different Mule applications within a single Mule runtime instance or across different instances using shared memory or persistent storage. If two APIs are deployed under the same domain, they can share resources such as VM queues and communicate asynchronously using VM Connector operations. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/vm-connector> <https://docs.mulesoft.com/mule-runtime/4.3/shared-resources>

#### NEW QUESTION # 23

A healthcare portal needs to validate the token that it sends to a Mule API. The developer plans to implement a custom policy using the HTTP Policy Transform Extension to match the token received in the header from the healthcare portal. Which files does the developer need to create in order to package the custom policy?

- A. JSON properties file, XML template file
- **B. XML template file, YAML configuration file**
- C. Deployable ZIP file, YAML configuration file
- D. JSON properties file, YAML configuration file

**Answer: B**

Explanation:

To package a custom policy using the HTTP Policy Transform Extension, the developer needs to create an XML template file and a YAML configuration file. The XML template file defines the policy logic using Mule components and placeholders for user-defined properties. The YAML configuration file defines the metadata of the policy, such as its name, description, category, parameters, and dependencies. Reference: <https://docs.mulesoft.com/api-manager/2.x/http-policy-transform#packaging-the-policy>

## NEW QUESTION # 24

.....

The VerifiedDumps is one of the top-rated and leading platforms that have been offering a simple, smart, and easiest way to pass the challenging Mule-Dev-301 exam with good scores. The Salesforce Mule-Dev-301 Exam Questions are real, valid, and updated. These Mule-Dev-301 exam practice questions are designed and verified by experienced and qualified Mule-Dev-301 exam experts.
