## Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q45-Q50):

### NEW QUESTION # 45

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

- A. Supply Chain Management (SCM)
- B. Customer Relationship Management (CRM)**
- C. IT Service Management (ITSM)
- D. Business-to-Business (B2B)

### Answer: B

Explanation:

Customer Relationship Management (CRM): A CRM system (like Salesforce) is specifically designed to manage a company's interactions with current and potential customers<sup>5</sup>.

Key Functionality: It stores contact information, identifies sales opportunities, records service issues, and manages marketing campaigns-perfectly matching the requirement to "increase cross-selling" and "track prospect data"<sup>6</sup>.

Why others are incorrect:

SCM: Manages the flow of goods and services (logistics/inventory)<sup>7</sup>.

ITSM: Manages IT services (help desk tickets)<sup>8</sup>.

B2B: Refers to the exchange of products/services between businesses, not the system of record for prospect data<sup>9</sup>.

### NEW QUESTION # 46

What are two reasons why a typical Mulesoft customer favors a Mulesoft-hosted Anypoint platform runtime plane over a customer-hosted runtime for its Mule application deployments?

- A. Reduced application latency
- B. Reduced time-to-market for the first application**
- C. Reduced IT operations effort**
- D. Increased application throughput
- E. Increased application isolation

### Answer: B,C

Explanation:

MuleSoft-Hosted Runtime (CloudHub): This is an Integration Platform as a Service (iPaaS) model where MuleSoft manages the infrastructure.

Reduced IT Operations Effort (Option A): Because MuleSoft manages the physical servers, operating system updates, and patching,

the customer's IT team does not need to maintain the hardware or VM infrastructure.

Reduced Time-to-Market (Option D): With a pre-configured environment ready for deployment, teams can deploy applications immediately without waiting for the provisioning of on-premises servers, load balancers, or network configurations.

#### NEW QUESTION # 47

An IT integration delivery team begins a project by gathering all of the requirements, and proceeds to execute the remaining project activities as sequential, non-repeating phases. Which IT project delivery methodology is this team following?

- A. Scrum
- B. Agile
- C. Kanban
- D. Waterfall

#### Answer: D

Explanation:

Waterfall Methodology: This traditional approach is characterized by a linear, sequential design process<sup>2</sup>.

Key Characteristics:

Upfront Requirements: All requirements are gathered at the very beginning (as stated in the question).

Sequential Phases: Analysis -> Design -> Implementation -> Testing -> Deployment.

Non-repeating: You typically do not go back to a previous phase once it is signed off.

Why others are incorrect: Agile, Scrum, and Kanban are iterative methodologies that encourage repeating cycles (sprints) and evolving requirements, which is the opposite of the scenario described.

#### NEW QUESTION # 48

Which Anypoint Platform component helps integration developers discover and share reusable APIs, connectors, and templates?

- A. Anypoint Exchange
- B. Anypoint Studio
- C. API Manager
- D. Design Center

#### Answer: A

Explanation:

Anypoint Exchange: This is the "marketplace" or central repository of the Anypoint Platform<sup>14</sup>.

Discovery & Reuse: Its primary purpose is to allow developers to publish their assets (APIs, Connectors, Templates) so that other developers can find ("discover") and reuse them. This drives the efficiency of the API-led connectivity model<sup>15</sup>.

Why others are incorrect:

Anypoint Studio: The IDE for building applications<sup>16</sup>.

API Manager: For governing and securing running APIs<sup>17</sup>.

Design Center: For designing API specifications and flows<sup>18</sup>.

#### NEW QUESTION # 49

Which productivity advantage does Anypoint Platform have to both implement and manage an API?

- A. Automatic API proxy generation
- B. Automatic API semantic versioning
- C. Automatic API governance
- D. Automatic API specification generation

#### Answer: A

Explanation:

Automatic API Proxy Generation: When managing an API in API Manager, Anypoint Platform allows you to automatically generate and deploy an API Proxy application to CloudHub.

Functionality: This proxy sits in front of your backend implementation (or a non-Mule API) and enforces policies (like rate limiting or security) without requiring you to write code for the proxy manually. This significantly speeds up the process of securing and

managing APIs compared to building custom gateway solutions.
