

New DVA-C02 Exam Prep Pass Certify | High-quality Sure DVA-C02 Pass: AWS Certified Developer - Associate

টিউটোরিয়া পরীক্ষা-১
বিষয়: বাংলা দ্বিতীয় পত্র
সময়: ৩০ মিনিট
পরিচ্ছেদ-৫, ৬
পূর্ণমান-৩০
(এক কথায় উত্তর দাও)-২০

১। ওষ্ঠের মধ্যকার ফাঁকের কম-বেশির ভিত্তিতে স্বরধ্বনিকে কত ভাগে ভাগ করা হয়েছে?
২। 'ক্ষ' এর বিশ্লিষ্ট রূপ কী?
৩। মৌলিক ধ্বনি কয়টি?
৪। জিহ্বার উচ্চতা অনুযায়ী 'অ্যা' কোন স্বরধ্বনি?
৫। ধ্বনি উচ্চারণের সময় নাক ও মুখ দিয়ে বায়ু বের হলে ধ্বনির প্রকৃতি কেমন হয়?
৬। কোনো ব্যক্তির সঙ্গে কারবর্ণ বা হ্রস্ব চিহ্ন না থাকলে ঐ ব্যক্তির সাথে কী আছে বলে ধরে নেওয়া হয়?
৭। মূল বর্ণের পাশাপাশি বাংলা বর্ণমালায় কয় ধরনের বর্ণ রয়েছে?
৮। শব্দ তালু ও উপরের পাটির দীর্ঘের মধ্যবর্তী উচ্চ অংশের নাম কী?
৯। 'ক্ষ' দুজনের দিক থেকে কোন বর্ণ?
১০। গৌটের উদ্ভূত অনুযায়ী 'ও' কোন স্বরধ্বনি?
১১। জিহ্বার উচ্চতার ভিত্তিতে স্বরধ্বনিগুলোকে কয় ভাগে ভাগ করা যায়?
১২। একটি অর্ধস্বর ও একটি পূর্ণস্বর মিলে কোন স্বরধ্বনি হয়?
১৩। 'যাই' শব্দে কোন স্বরের রয়েছে?
১৪। স্বরধ্বনি অনুসৃত করে কোনটি ব্যবহার করতে হয়?
১৫। জিহ্বার সন্মুখ-পশ্চাৎ অবস্থান অনুযায়ী স্বরধ্বনিগুলোকে কয় ভাগে ভাগ করা যায়?
১৬। যে স্বরধ্বনিকে কোনোভাবেই দীর্ঘ করে উচ্চারণ করা যায় না তাকে বলে.....।
১৭। গৌটের উদ্ভূত ভিত্তিতে স্বরধ্বনিকে কয় ভাগে ভাগ করা হয়েছে?
১৮। বাংলা বর্ণমালায় কোন কোন স্বরের জন্য আলাদা বর্ণ রয়েছে?
১৯। ধ্বনির প্রতীকে বলে.....।
২০। জিহ্বার অবস্থান অনুযায়ী 'আ' কোন স্বরধ্বনি?

সারাংশ লেখ:
সমাজের কাজ কেবল মানুষকে টিকে থাকার সুবিধা দেওয়া নয়, মানুষকে বড় করে তোলা, বিকশিত জীবনের জন্য মানুষের জীবনে আগ্রহ জাগিয়ে দেওয়া। স্বল্পপ্রাণ স্থূলবুদ্ধি ও জবরদস্তিপ্রিয় মানুষের সংসার পরিপূর্ণ। তাদের কাজ নিজের জীবনকে সার্থক ও সুন্দর করে তোলা নয়, অপরের সার্থকতার পথে অন্তরায় সৃষ্টি করা। প্রেম ও সৌন্দর্যের স্পর্শ লাভ করেনি বলে এরা নিষ্ঠুর ও বিকৃতবুদ্ধি। এদের একমাত্র দেবতা অহংকার। তারই চরণে তারা নিবেদিতপ্রাণ। ব্যক্তিগত অহংকার, পারিবারিক অহংকার, জাতির অহংকার ও ধর্মগত অহংকার- এ সবের লাল নিশান ওড়ানোই এদের কাজ। মাঝে মাঝে মানব-প্রেমের কথাও তারা বলে। কিন্তু তাতে নেশা ধরে না, মনে হয় তা আন্তরিকতাহীন ও উপলব্ধিহীন বুলি মাত্র।

The purchase process of our DVA-C02 question torrent is very convenient for all people. In order to meet the needs of all customers, our company is willing to provide all customers with the convenient purchase way. If you buy our DVA-C02 study tool successfully, you will have the right to download our DVA-C02 exam torrent in several minutes, and then you just need to click on the link and log on to your website's forum, you can start to learn our DVA-C02 question torrent. We believe the operation is very convenient for you, and you can operate it quickly. At the same time, we believe that the convenient purchase process will help you save much time.

Amazon DVA-C02 (AWS Certified Developer - Associate) Certification Exam is a sought-after certification for professionals who want to specialize in developing and deploying applications on AWS. DVA-C02 exam is designed for individuals with at least one year of experience in developing and maintaining applications on the AWS platform. AWS Certified Developer - Associate certification validates the skills and knowledge required to build and deploy secure, scalable, and fault-tolerant applications on AWS.

DVA-C02 Exam Prep, Amazon Sure DVA-C02 Pass: AWS Certified

Developer - Associate Pass Certify

The DVA-C02 PDF file contains the real, valid, and updated Amazon DVA-C02 exam practice questions. These are the real DVA-C02 exam questions that surely will appear in the upcoming exam and by preparing with them you can easily pass the final exam. The DVA-C02 PDF Questions file is easy to use and install. You can use the DVA-C02 PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start Amazon exam preparation right now.

Amazon AWS Certified Developer - Associate Sample Questions (Q393-Q398):

NEW QUESTION # 393

A development team is creating a serverless application that uses AWS Lambda functions. The team wants to streamline a testing workflow by sharing test events across multiple developers within the same AWS account. The team wants to ensure all developers can use consistent test events without compromising security.

- A. Set up a Git repository to store test events. Provide the developers with access to the repository.
- B. Configure test events to be shareable. Configure granular IAM permissions to allow the developers to access shared test events.
- C. Store test events in an Amazon DynamoDB table. Create an AWS Lambda function to retrieve shared test events for the developers.
- **D. Export test events as JSON files. Store the files in an Amazon S3 bucket. Configure granular IAM permissions to allow the developers to access the S3 bucket.**

Answer: D

Explanation:

Comprehensive and Detailed Step-by-Step

Option A: Use Amazon S3 for Shared Test Events:

Storing JSON test event files in an S3 bucket provides a centralized, cost-effective, and highly available solution.

Granular IAM policies can restrict access to specific developers or roles, ensuring security while maintaining consistency for shared test events.

This solution has minimal operational overhead and integrates easily with existing workflows.

Why Other Options Are Incorrect:

Option B: Using DynamoDB and a Lambda function introduces unnecessary complexity for a relatively simple requirement. S3 provides a simpler and more cost-efficient solution.

Option C: AWS Lambda test events are not inherently shareable across developers, making this option invalid.

Option D: Using a Git repository adds operational overhead and requires developers to clone/update repositories for access, which is more cumbersome compared to S3.

Amazon S3 for Centralized Storage

NEW QUESTION # 394

A developer used the AWS SDK to create an application that aggregates and produces log records for 10 services. The application delivers data to an Amazon Kinesis Data Streams stream.

Each record contains a log message with a service name, creation timestamp, and other log information. The stream has 15 shards in provisioned capacity mode. The stream uses service name as the partition key.

The developer notices that when all the services are producing logs, `ProvisionedThroughputExceededException` errors occur during `PutRecord` requests. The stream metrics show that the write capacity the applications use is below the provisioned capacity.

- A. Use a separate Kinesis stream for each service to generate the logs.
- **B. Change the partition key from service name to creation timestamp.**
- C. Double the number of shards until the throttling errors stop occurring.
- D. Change the capacity mode from provisioned to on-demand.

Answer: B

Explanation:

Comprehensive and Detailed Step-by-Step

Issue Analysis:

The stream uses service name as the partition key. This can cause "hot partition" issues when a few service names generate significantly more logs compared to others, causing uneven distribution of data across shards. Metrics show that the write capacity used is below provisioned capacity, which confirms that the throughput errors are due to shard-level limits and not overall capacity.

Option C: Change Partition Key to Creation Timestamp:

By changing the partition key to the creation timestamp (or a composite key including timestamp), the distribution of data across shards can be randomized, ensuring an even spread of records.

This resolves the shard overutilization issue and eliminates ProvisionedThroughputExceededException.

Why Other Options Are Incorrect:

Option A: Switching to on-demand capacity mode might temporarily alleviate the issue, but the root cause (hot partitioning) remains unresolved.

Option B: Adding shards increases capacity but does not fix the skewed data distribution caused by using the service name as the partition key.

Option D: Creating separate streams for each service adds unnecessary complexity and does not scale well as the number of services grows.

Best Practices for Kinesis Data Streams Partition Key Design

NEW QUESTION # 395

A developer is using AWS CloudFormation to deploy an AWS Lambda function. The developer needs to set the Lambda function's timeout value based on the environment parameter of the template. The template contains mappings of EnvironmentData for each environment's timeout value. The environment parameter and EnvironmentData mappings are as follows:

Environment parameter:

EnvironmentData mappings:

Which statement will meet these requirements?

- A. Timeout: !ForEach[EnvironmentData, !Ref Environment, Timeout]
- B. Timeout: !Select [EnvironmentData, !Ref Environment, Timeout]
- C. Timeout: !FindInMap [EnvironmentData, !Ref Environment, Timeout]
- D. Timeout: !GetAtt [EnvironmentData, !Ref Environment, Timeout]

Answer: C

NEW QUESTION # 396

A development team maintains a web application by using a single AWS CloudFormation template. The template defines web servers and an Amazon RDS database. The team uses the Cloud Formation template to deploy the Cloud Formation stack to different environments.

During a recent application deployment, a developer caused the primary development database to be dropped and recreated. The result of this incident was a loss of data. The team needs to avoid accidental database deletion in the future.

Which solutions will meet these requirements? (Choose two.)

- A. Update the CloudFormation stack policy to prevent updates to the database.
- B. Add a CloudFormation Deletion Policy attribute with the Retain value to the database resource.
- C. Create a CloudFormation stack set for the web application and database deployments.
- D. Modify the database to use a Multi-AZ deployment.
- E. Add a Cloud Formation DeletionPolicy attribute with the Retain value to the stack.

Answer: A,B

Explanation:

AWS CloudFormation is a service that enables developers to model and provision AWS resources using templates. The developer can add a CloudFormation Deletion Policy attribute with the Retain value to the database resource. This will prevent the database from being deleted when the stack is deleted or updated. The developer can also update the CloudFormation stack policy to prevent updates to the database. This will prevent accidental changes to the database configuration or properties.

NEW QUESTION # 397

A developer is using AWS CodeDeploy to deploy an application running on Amazon EC2. The developer wants to change the file permissions for a specific deployment file.

Which lifecycle event should a developer use to meet this requirement?

- A. AfterInstall
- B. ValidateService
- C. BeforeInstall
- D. DownloadBundle

Answer: A

Explanation:

You can use the AfterInstall deployment lifecycle event for tasks such as configuring your application or changing file permissions.
