ACD201 Test Cram Pdf, Valid ACD201 Test Dumps

The ACD201 exam is the right way to learn new in-demand skills and upgrade knowledge. After passing the Appian Senior

Developer (ACD201) exam the successful candidates can gain multiple personal and professional benefits with the real Appian ACD201 Exam Questions. Validation of skills, more career opportunities, increases in salary, and increases in the chances of promotion are some prominent benefits of the Appian ACD201 certification exam.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 2	Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 3	Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 4	Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.

Appian Senior Developer Sample Questions (Q46-Q51):

NEW QUESTION # 46

You're reviewing the process model built by your team member.

Which two design decisions might cause performance issues? (Choose two.)

- A. Asynchronous subprocess
- B. Too many nodes
- C. Data types passed by reference
- D. No target process for the Send Message event

Answer: B,D

Explanation:

Having no target process for the Send Message event can cause unnecessary processing and delays.

Too many nodes in a process model increase complexity and processing overhead, leading to potential performance issues.

NEW QUESTION # 47

You need to add test cases to an existing expression rule in the system. Expression rule gives a complex data type value as an output result.

The test case should pass only when a field in the resultant data matches with a specific value mentioned.

How should you configure the test case assertion?

- A. Assertion expression evaluates to True.
- B. Test completes without errors.
- C. Test output matches the asserted output.

Answer: A

Explanation:

Configuring the test case assertion so that the assertion expression evaluates to True allows you to specifically check whether the desired field in the complex data type result matches the required value.

NEW QUESTION # 48

What are two advantages of database normalization? (Choose two.)

- A. Simplifying query statements to read data.
- B. Minimizing data redundancy.
- C. Enforcing data integrity.
- D. Minimizing the number of tables that need to be created.

Answer: B,C

Explanation:

Database normalization enforces data integrity by structuring data and relationships to prevent anomalies. It minimizes data redundancy by ensuring each piece of information is stored only once, reducing duplication.

NEW QUESTION # 49

You need to select a plug-in to meet a specific requirement and several plug-ins can do the job. What are three key factors to consider? (Choose three.)

- A. Is the plug-in open source or proprietary?
- B. Is the plug-in approved for use in the Cloud?
- C. What are the limitations of the plug-in?
- D. Who is the creator of the plug-in?
- E. What is the size of the plug-in?
- F. What are the compatible Appian versions?

Answer: B,C,F

Explanation:

Limitations of the plug-in help you understand constraints or potential issues that could impact your implementation. Compatible Appian versions ensure the plug-in will work correctly in your current and future environments. Cloud approval status is essential for Appian Cloud environments, as only approved plug-ins are permitted for deployment.

NEW QUESTION # 50

A recent Health Check report of your application indicates an increased risk of large context size in the interfaces. What are two possible contributors to this risk? (Choose two.)

- A. The load variable has a web service response as JSON.
- B. Multiple local variables hold duplicate data.
- C. Local variables are set to refresh every five minutes.
- D. Data transformation is performed inside the interface rather than delegated to the source system.

Answer: B,D

Explanation:

Performing data transformation inside the interface can increase the amount and size of context data stored, raising context size risk. Multiple local variables holding duplicate data unnecessarily inflate the interface's memory footprint, contributing to large context size.

NEW QUESTION # 51

.....

We provide Appian ACD201 exam product in three different formats to accommodate diverse learning styles and help candidates prepare successfully for the ACD201 exam. These formats include ACD201 web-based practice test, desktop-based practice exam software, and Appian Senior Developer (ACD201) pdf file. Before purchasing, customers can try a free demo to assess the quality of the Appian ACD201 practice exam material.
