AZ-800 Online Exam, AZ-800 Valid Test Book

Our AZ-800 study braindumps are designed in the aim of making the study experience more interesting and joyful. Through pleasant learning situation and vivid explanation of our AZ-800 exam materials, you will become more interested in learning. Please accept our AZ-800 learning prep and generate a golden bowl for yourself. We are waiting for your wise decision to try on or buy our excellent AZ-800 training guide.

Microsoft AZ-800 certification exam is designed to test the skills of IT professionals in administering Windows Server Hybrid Core Infrastructure. AZ-800 exam is focused on the implementation and management of hybrid solutions that combine both on-premises and cloud resources. Candidates who Pass AZ-800 Exam will be recognized as experts in the field of hybrid infrastructure management.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q124-Q129):

NEW QUESTION # 124
Note: This section contains one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem. You must determine whether the solution meets the stated goals. More than one solution in the set might solve the problem. It is also possible that none of the solutions in the set solve the problem.
After you answer a question in this section, you will NOT be able to return. As a result, these questions do not appear on the Review Screen.
Your network contains an Active Directory Domains Services (AD DS) domain named contoso.com.
You implement a central store.

You create a new Group Policy Object (GPO) named GPO1.
When you attempt to edit GPO1, you see the settings shown in the exhibit. (Click the Exhibit tab.)
You need to ensure that all settings are available.
Solution: You copy the contents of the C:\Windows\PolicyDefinitions folder to the central store.
Does this meet the goal?

- A. No
- B. Yes

Answer: B

NEW QUESTION # 125

As an administrator, you're responsible for managing the security in hybrid as well as on- premises scenarios. While securing IPAM, which of the following would help you with defining the administrative domains of IPAM?

- A. IPAM Roles
- B. IPAM Access Policies
- C. IPAM Access Scopes
- D. None of the above

Answer: C

Explanation:
An access scope is responsible to decide which objects a user has access. Access scopes can be used for defining the IPAM administrative domains.

https://docs.microsoft.com/en-us/learn/modules/implement-ip-address-management/4-administer- ip-address-management

NEW QUESTION # 126

Your network contains an on-premises Active Directory Domain Services (AD DS) domain. The domain contains a user named User1 and the servers shown in the following table.
User1 is a member of the Protected Users security group.
User1 performs the following actions:
- From Server1, establishes a remote PowerShell session on Server2
- From the PowerShell session on Server2, attempts to access a resource on Backup1 The request to access the resource on Backup1 is denied.
You need to ensure that User1 can access the resources on Backup1 by using the PowerShell session on Server2. The solution must follow the principle of least privilege and minimize administrative effort.
What should you configure?

- A. CredSSP
- B. PSSessionConfiguration by using RunAs
- C. Kerberos delegation (unconstrained)
- D. resource-based Kerberos constrained delegation

Answer: D

Explanation:
This scenario requires double-hop authentication from Server1 to Server2 via PowerShell, then from Server2 to Backup1 for resource access. Resource-based Kerberos constrained delegation is the most appropriate solution as it follows the principle of least privilege by configuring delegation at the resource level (Backup1) and minimizes administrative effort without requiring domain admin rights.

NEW QUESTION # 127

You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync.
You have a cloud tiering policy that is configured for 30 percent free space and 70 days.

Volume E on Server1 is 500 GB.

A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Volume E does NOT contain any other files.

Where are File1 and File3 located? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Graphical user interface, text, application, email Description automatically generated

https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-cloud-tiering-overview

NEW QUESTION # 128

You have an on-premises Active Directory Domain Services (AD DS) domain that syncs with an Azure Active Directory (Azure AD) tenant. You plan deploy 100 new Azure virtual machines that will run Windows Server. You need to ensure that each new virtual machine is joined to the AD DS domain. What should you use?

- A. an Azure management group
- B. an Azure Resource Manager (ARM) template
- C. Azure AD Connect
- D. a Group Policy Object (GPO)

Answer: C

NEW QUESTION # 129

......

At the moment you come into contact with AZ-800 learning guide you can enjoy our excellent service. You can ask our staff about what you want to know, then you can choose to buy. If you use the AZ-800 study materials, and have problems you cannot solve, feel free to contact us at any time. Our staff is online 24 hours to help you on our AZ-800 simulating exam. When you use AZ-800 learning guide, we hope that you can feel humanistic care while acquiring knowledge. Every staff at AZ-800 simulating exam stands with you.
