## 2026 100% Free Mule-101 –Reliable 100% Free Reliable Test Blueprint | Mule-101 Latest Exam Discount

As long as you insist on using our Mule-101 learning prep, you can get the most gold certificate in the shortest possible time! Want to see how great your life will change after that! You can make more good friends and you can really live your fantasy life. Don't hesitate, the future is really beautiful! If you are still not sure if our product is useful, you can free download the free demos of our Mule-101 practice quiz. It is easy and fast.

## Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q17-Q22):

### NEW QUESTION # 17

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load.

- A. Down
- B. Diagonal
- C. Vertical
- **D. Horizontal**

**Answer: D**

Explanation:

**Horizontal Scaling (Scale Out):** This involves adding more instances (replicas/nodes) of a resource to handle increased load. In a Kubernetes or Runtime Fabric context, when the controller adds another "pod replica," it is strictly defined as horizontal scaling.

**Vertical Scaling (Scale Up):** This would involve increasing the size (CPU or RAM capacity) of an existing single instance/pod, rather than adding more copies of it.

Context: MuleSoft's Runtime Fabric (RTF) runs on Kubernetes and leverages this horizontal auto-scaling capability to maintain

performance under high traffic.

### NEW QUESTION # 18

As part of a growth strategy, a supplier signs a trading agreement with a large customer. The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard, and the supplier creates the orders in its ERP system using the information in the EDI document.

- A. Data mashups
- B. Streaming data ingestion
- C. Synchronized data transfer
- D. User interface integration
- E. Sharing data with external partners

**Answer: C,E**

Explanation:

Context: This scenario describes a classic B2B (Business-to-Business) integration.

Sharing data with external partners (Option C): EDI (Electronic Data Interchange) is the global standard for exchanging business documents (like Purchase Orders) between different organizations (Trading Partners). This fits the "External Partners" criteria perfectly.

Synchronized data transfer (Option B): The requirement is to take data from the incoming source (EDI file) and map/move it into a target system (ERP) to create an order. This process of moving data from System A to System B to keep them consistent is defined as synchronized data transfer.

### NEW QUESTION # 19

What are two reasons why a typical Mulesoft customer favors a Mulesoft-hosted Anypoint platform runtime plane over a customer-hosted runtime for its Mule application deployments?

- A. Increased application throughput
- B. Reduced time-to-market for the first application
- C. Reduced IT operations effort
- D. Reduced application latency
- E. Increased application isolation

**Answer: B,C**

Explanation:

MuleSoft-Hosted Runtime (CloudHub): This is an Integration Platform as a Service (iPaaS) model where MuleSoft manages the infrastructure.

Reduced IT Operations Effort (Option A): Because MuleSoft manages the physical servers, operating system updates, and patching, the customer's IT team does not need to maintain the hardware or VM infrastructure.

Reduced Time-to-Market (Option D): With a pre-configured environment ready for deployment, teams can deploy applications immediately without waiting for the provisioning of on-premises servers, load balancers, or network configurations.

### NEW QUESTION # 20

A team has completed the build and test activities for a Mule application that implements a System API for its application network. Which Anypoint Platform component should the team now use to both deploy and monitor the System API implementation?

- A. API Manager
- B. Runtime Manager
- C. Anypoint Exchange
- D. Design Center

**Answer: B**

Explanation:

Runtime Manager: This is the interface within the Anypoint Control Plane used to manage the lifecycle of deployments.

Capabilities:

Deploy: You upload the JAR file here to deploy it to CloudHub, Runtime Fabric, or On-Prem servers.  
Monitor: Once deployed, it provides dashboards for CPU usage, Memory usage, and status (Started/Stopped).  
Why others are incorrect:  
API Manager: Manages policies (security) and gateways, not the deployment of the application artifact itself.  
Design Center: For creating the app, not deploying it.

### NEW QUESTION # 21

According to the Internet Engineering Task Force (IETF), which supporting protocol does File Transfer Protocol (FTP) use for reliable communication?

- **A. Transmission Control Protocol (TCP)**
- B. Secure Sockets Layer (SSL)
- C. Hypertext Transfer Protocol (HTTP)
- D. Lightweight Directory Access Protocol (LDAP)

**Answer: A**

Explanation:

TCP (Transmission Control Protocol): FTP is an application-layer protocol that relies on TCP at the transport layer to ensure reliable, ordered, and error-checked delivery of a stream of bytes<sup>12</sup>.

Mechanism: FTP establishes two TCP connections: one for control (commands) and one for data transfer.

Why others are incorrect:

UDP: Is unreliable (best effort).

HTTP: Is an alternative application protocol, not the transport layer for FTP.

LDAP: Is for directories.

### NEW QUESTION # 22

.....

We are committed to using Exam4Labs Salesforce Mule-101 Exam Training materials, we can ensure that you pass the exam on your first attempt. If you are ready to take the exam, and then use our Exam4Labs Salesforce Mule-101 exam training materials, we guarantee that you can pass it. If you do not pass the exam, we can give you a refund of the full cost of the materials purchased, or free to send you another product of same value.
