## 100% Pass GIAC - GICSP - Global Industrial Cyber Security Professional (GICSP) Pass-Sure Reliable Exam Questions

I believe that after you use our GICSP study materials for a while, we will understand why we have a 99% pass rate. Our company has been pursuing the quality of our products. And our professional experts are the most specialized people in this career to help us pass the GICSP Exam. They have studied and done research on the design of our GICSP practice guide for over ten years. So every detail of our GICSP exam questions is perfect.

### GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q84-Q89):

#### NEW QUESTION # 84

You are tasked with securing Level 0 and Level 1 devices in a critical ICS environment. Which of the following security measures should you implement to protect these devices from potential compromise?

(Select all that apply)

Response:

- **A. Implement strong encryption for communications between devices**
- B. Disable all logging features for better performance
- **C. Use network segmentation to isolate Level 0 and Level 1 devices**
- **D. Apply access control measures to limit device configuration changes**

**Answer: A,C,D**

#### NEW QUESTION # 85

Use

sqlmap to dump tables from [http://locjllhost/index.php?page-login\\_php](http://locjllhost/index.php?page-login_php). The data necessary for this is as follows:

How many tables does sqlmap find in the dojo control database? Hint: The option to dump tables is --tables

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4
- F. 5
- G. 6
- H. 7
- I. 8
- J. 9

**Answer: A**

Explanation:

This question relates to the use of sqlmap, a popular automated tool for detecting and exploiting SQL injection vulnerabilities, which is part of the GICSP skillset in vulnerability assessment and exploitation.

When using the --tables option, sqlmap enumerates the database tables present.

The "dojo control database" is a common demo database used in many ICS cybersecurity exercises.

According to GICSP lab references and known exercises involving dojo, the database often contains 84 tables, reflecting a complex schema.

This aligns with GICSP's guidance on vulnerability scanning, enumeration, and exploitation techniques in ICS environments.

#### NEW QUESTION # 86

A brewer uses a local HMI to communicate with a controller that opens a pump to move the work from the boil kettle to the fermenter. What level of the Purdue model would the controller be considered?

- A. Level 2
- B. Level 4
- C. Level 0
- D. Level 1
- E. Level 3

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Purdue Enterprise Reference Architecture (PERA) model, commonly used in ICS security frameworks like GICSP, segments industrial control systems into hierarchical levels that correspond to the function and control of devices:

Level 0: Physical process (sensors and actuators directly interacting with the process) Level 1: Basic control level (controllers such as PLCs or DCS controllers that execute control logic and command actuators) Level 2: Supervisory control (HMIs, SCADA supervisory systems that interface with controllers) Level 3: Operations management (Manufacturing Execution Systems, batch control, production scheduling) Level 4: Enterprise level (business systems, ERP, corporate IT) In this scenario, the controller opening the pump is a device executing control logic directly on the process, placing it at Level 1. The local HMI used to communicate with the controller is at Level 2, supervising and providing operator interface.

This classification is foundational in GICSP's ICS Fundamentals and Architecture domain, which emphasizes clear understanding of network segmentation and device role for security zoning.
