220-1201 Torrent PDF & 220-1201 Exam Torrent & 220-1201 Test Dumps

These are expertly designed CompTIA 220-1201 mock tests, under the supervision of thousands of professionals. A 24/7 customer service is available for assistance in case of any sort of pinch. It shows results at the end of every CompTIA 220-1201 mock test attempt so you don't repeat mistakes in the next try. To confirm the license of the product, you need an active internet connection. Exams4Collection desktop CompTIA A+ Certification Exam: Core 1 (220-1201) Practice Test is compatible with every Windows-based computer. You can use this software without an active internet connection.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q201-Q206):

NEW QUESTION # 201

A technician is troubleshooting an all-in-one laser printer that prints a vertical line when making copies and scans. When users print or receive faxes, the output from the printer is correct. Which of the following should the technician examine to determine the cause of the issue?

- A. The corona wire
- **B. The document feeder**
- C. The pickup rollers
- D. The drum assembly

Answer: B

Explanation:

A scratch or debris on the feeder's glass or its rollers will show up as a vertical line on any copy/scan, while outgoing prints (which use the drum and toner path) remain unaffected.

NEW QUESTION # 202

Users working with large files back up the files to external hard drives. One user's files take longer to back up than other users' files. The user has tried backing up the files to other users' drives with the same results. Which of the following steps should the technician take first to correct this issue?

- **A. Defragment the user's external hard drive.**
- B. Update the storage drivers on the user's system.
- C. Instruct the user to compress the files.
- D. Replace the hard drive's USB cable.

Answer: A

Explanation:

If a hard drive is heavily fragmented, file read/write operations can take significantly longer, causing slow backup speeds.

Defragmenting the drive organizes the data for more efficient access.

Why Not A (Replace the hard drive's USB cable): A faulty cable would typically cause disconnections or errors, not just slower speeds.

Why Not C (Update the storage drivers): This might help if the issue is with system drivers, but the described symptoms point to a fragmentation issue.

Why Not D (Compress the files): Compression reduces file size but does not address the root cause of the slow backups.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 3.1, storage troubleshooting.

NEW QUESTION # 203

The output from a dot matrix printer has become lighter over time. Which of the following should a technician do to fix the issue?

- A. Install a maintenance kit.
- B. Clean the printhead.
- **C. Replace the ribbon.**
- D. Calibrate the alignment.

Answer: C

Explanation:

Dot matrix printers use an inked ribbon that physically contacts the paper through tiny pins. Over time, the ribbon wears out or dries up, resulting in faded or light print output. Replacing the ribbon restores print quality.

Option A: Cleaning helps with image clarity, not ink density.
Option C: Maintenance kits apply to laser printers, not dot matrix.
Option D: Calibration affects print position, not darkness.
CompTIA A+ Core 1 Exam Objective Reference:
Objective 3.7: Given a scenario, troubleshoot common printer problems.

NEW QUESTION # 204

A user reports poor performance on the application server.

INSTRUCTIONS

Click on Server 1 and Server 2 and review the information presented in each chart to determine which drives need to be replaced. Select the appropriate replacement drive that should be used, for the least performance degradation to the server. If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Answer:

Explanation:

See the detailed solution in explanation below.

Explanation:

The degraded status on Server 2 indicates a RAID-5 issue, typically due to a failed or failing drive. In RAID-5 configurations, when one drive fails, the system can still operate but with reduced performance as parity data is used to rebuild missing data on-the-fly.

Recommended Replacement Drive:

To minimize performance degradation, the replacement drive should be:

SAS HDD with the same specifications (64KB stripe size, no read-ahead, and write-back policy).

Matching the configuration exactly ensures seamless integration and optimizes recovery speed in the RAID-5 array.

In RAID-5, degraded performance is expected when one drive fails, as parity data needs to rebuild missing information during each read/write process. Replacing the failed drive restores the RAID array to optimal status, reducing the load on existing drives and returning the system to normal read/write performance. The write-back policy and disabled disk cache settings are designed to reduce latency and increase efficiency, essential for handling real-time applications.

A user reports poor performance on the application server.

INSTRUCTIONS

Click on Server 1 and Server 2 and review the information presented in each chart to determine which drives need to be replaced. Select the appropriate replacement drive that should be used, for the least performance degradation to the server.

A computer server with many black and silver parts AI-generated content may be incorrect. A computer server with many black boxes Description automatically generated with medium confidence

A screenshot of a computer AI-generated content may be incorrect. A screenshot of a computer Description automatically generated

NEW QUESTION # 205

A user's computer can connect to internal network resources but cannot access websites on the internet. Other users on the same network do not have this issue. Which of the following should a technician do first to troubleshoot the issue?

- A. Restart the DHCP server.

- B. Verify the computer's DNS settings.
- C. Adjust the firewall rules on the router.
- D. Replace the network cable.

Answer: B

Explanation:

Since the user can access internal resources but not external websites, the issue likely lies with DNS resolution. Checking and correcting the computer's DNS settings ensures it can properly resolve domain names to IP addresses for internet access.

NEW QUESTION # 206

.....

Web-based CompTIA A+ Certification Exam: Core 1 (220-1201) practice exam is a convenient format to evaluate and improve preparation for the exam. It is a 220-1201 browser-based application, which means you can access it from any operating system with an internet connection and a web browser. Unlike the desktop-based exam simulation software, the CompTIA A+ Certification Exam: Core 1 (220-1201) browser-based practice test requires no plugins and software installation.
