No matter which country you are currently in, you can be helped by our Health-Cloud-Accredited-Professional study materials.

Salesforce Health Cloud Accredited Professional Sample Questions (Q17-Q22):

NEW QUESTION # 17

Bloomington Caregivers has created and tested its first care plan template in a sandbox, which includes problems, goals, and tasks. The company has deployed this template to its final environment using Data Loader.

Which two steps should a consultant recommend, following this deployment, to enable users to successfully leverage this new template?

Choose 2 answers

- A. Conduct end-user training on the use of the care plan template.
- B. Activate the problems, goals, and tasks associated with the template.
- C. **Confirm User access to Care Plan objects.**
- D. **Activate the new care Plan template.**

Answer: C,D

Explanation:

After deploying a care plan template to the final environment, it is crucial to perform the following steps to ensure users can successfully leverage it:

Activate the New Care Plan Template (A):

After deployment via Data Loader, the care plan template remains inactive by default. You must activate it in the final environment to make it available for users to apply to patient cases.

Activation ensures that care providers can use the template to assign care plans that include problems, goals, and tasks to their patients.

Confirm User Access to Care Plan Objects (B):

Users need the appropriate permissions to access care plan objects (e.g., Problems, Goals, and Tasks). Verify and assign the correct profiles or permission sets to ensure users can view, edit, and apply these components within the care plan template.

Why Other Options Are Incorrect:

C . Conduct end-user training on the use of the care plan template:

While beneficial for user adoption, training is not a technical or mandatory step to enable users to leverage the template post-deployment.

D . Activate the problems, goals, and tasks associated with the template:

Individual components like problems, goals, and tasks are activated as part of the template. Activating the template itself (Option A) suffices.

NEW QUESTION # 18

Which Feature would an administrator setup to help their sales team view all provider related to a specific facility?

- A. Provider Search
- B. Provider Cards
- C. Provider Relationship
- **D. Practitioner Relationship**

Answer: D

Explanation:

According to the Salesforce documentation³, Practitioner Relationship is an object in Health Cloud that is used to track the relationship between a provider and another provider or a facility. Practitioner Relationship includes information such as the relationship type, start date, end date, and status. Practitioner Relationship can be used to help sales teams view all providers related to a specific facility³.

NEW QUESTION # 19

Which resource within health cloud facilitates the easy exchange of data between Health Cloud and the client Electronic Medical Records

- A. Health cloud has a lightning component button automatically configured to 'Export to EMR'
- B. Health Cloud has a built in HL7 integration Engine
- C. Health cloud has prebuilt connections for the top ten EMR's
- **D. Health cloud has published data mappings from commonly used HL7 message to the Health Cloud data model**

Answer: D

NEW QUESTION # 20

Bloomington Caregivers has replaced its legacy Contact Center application with Health Cloud. During user acceptance testing (UAT), the call center team is reporting differences between current Identity Verification business processes and what was built in Health Cloud.

The call center manager has requested the following changes:

* Birth Date be available in results and as an optional verifier, but no longer required for verification purposes

* Add 'Bloomington ID', a custom field on Account, to search results and as a required verifier What should a consultant do to meet these requirements?

- A. Add 'Bloomington ID' to the picklist choices within the Identity Verification flow and mark it as required. Remove the Birth Date record from the required fields picklist and add Birth Date to the optional verifiers picklist.
- B. Add two new Identity Verification Process Field records for "Bloomington Set the Field Type to Result Field and set the Required field to true.
- **C. Add two new Identity Verification Process Field records for 'Bloomington one with Field Type set to Result Field and one with Field Type set to Required Verifier. Change the Birth Date record with Field Type value Required Verifier to Optional Verifier.**
- D. Add two new Identity Verification Process Field records for 'Bloomington to one with the Field Type set to Result Field and one with Field Type set Optional Verifier. Delete the Birth Date record which has the Field Type value Required Verifier.

Answer: C

Explanation:

Step 1: Requirement Analysis

* Birth Date should be a result field and an optional verifier (not required).

* Bloomington ID (a custom field) should appear in search results and be a required verifier.

Step 2: Salesforce Health Cloud Identity Verification Process Configuration The Identity Verification Process Field object in Health Cloud determines which fields are used for search results, required verification, or optional verification during the identity verification process.

You can add multiple records for a field with different purposes (e.g., one as Result Field and another as Required/Optional Verifier).

Extract:

"You can add or modify Identity Verification Process Field records to control which fields are shown as search results, required verifiers, or optional verifiers. For example, to make a field a required verifier, set Field Type to 'Required Verifier'. To make a field show in results, set Field Type to 'Result Field'. You can have more than one record for the same field with different Field Types."

Administer Health Cloud - Identity Verification Process Step 3: Actions Needed

- * For Bloomington ID:
- * Add a record with Field Type = Result Field (to display in search results)
- * Add another record with Field Type = Required Verifier (to make it a required field for verification)
- * For Birth Date:
- * Update the current record so that Field Type is changed from Required Verifier to Optional Verifier (to make it not required but still usable as a verifier)
- * Ensure there is a record with Field Type = Result Field if Birth Date should show in the results Step 4: Review of Options
- * A: Incorrect; it says to delete the Birth Date Required Verifier instead of changing it to optional.
- * B: Not the right object/method; doesn't mention the correct object (Identity Verification Process Field).
- * C: Correct; matches the best practices and object structure in Health Cloud.
- * D: Incomplete; does not cover all configuration requirements.

Verified Answer:

C). Add two new Identity Verification Process Field records for 'Bloomington one with Field Type set to Result Field and one with Field Type set to Required Verifier. Change the Birth Date record with Field Type value Required Verifier to Optional Verifier.
