Laut Umfragen haben die Salesforce Plat-UX-101 Prüfung heutzutage hohe Konjunktur in IT-Zertifizierungen. Tatsächlich ist die Plat-UX-101 Zertifizierungsprüfung sehr wichtig. Und jetzt ist Plat-UX-101 Prüfung öffentlich zertifiziert. Außerdem kann diese Prüfung Ihre ausgezeichnete IT-Fähigkeit beweisen. Aber es ist sehr schwer, Salesforce Plat-UX-101 Prüfung zu bestehen. Und die Schwierigkeit ist so groß wie ihre Bedeutung. Trotz dieser Schwierigkeit sorgen Sie sich bitte nicht um den Erfolg, die Prüfung ablegen, weil PrüfungFrage Ihnen helfen kann, diese schwierige Plat-UX-101 Prüfung zu bestehen.

## **Salesforce Certified Platform User Experience Designer Plat-UX-101 Prüfungsfragen mit Lösungen (Q35-Q40):**

### **35. Frage**

A group of sales users needs to be guided step by step through a new process using Floating or Decked Prompts. Their administrative team wants to the ability to see the adoption of this assistance via Reports and Dashboards.

- A. Basic In-App Guidance Prompts
- B. Custom build using Salesforce Flow
- C. Use the Walkthrough App from AppExchange

- D. in-App Guidance Prompts using myTrailhead

**Antwort: C**

**Begründung:**

The best option for guiding sales users through a new process using floating or docked prompts is to use the Walkthrough App from AppExchange. This app allows admins to create and manage in-app guidance walkthroughs using clicks, not code. Walkthroughs are interactive tutorials that guide users through a series of steps on a Lightning page. Users can see the prompts, click the action buttons, and follow the instructions to complete the process. Admins can also track the engagement and completion of the walkthroughs using reports and dashboards. The Walkthrough App is compatible with the standard in-app guidance feature, and does not require a subscription to myTrailhead<sup>1</sup>.

The other options are not suitable for this scenario because:

**In-App Guidance Prompts using myTrailhead:** This option requires a subscription to myTrailhead, which is a customizable learning platform that allows admins to create their own content and branding. In-app guidance prompts are one of the features of myTrailhead, but they are not the same as walkthroughs. Prompts are single-step messages that appear on a Lightning page, while walkthroughs are multi-step tutorials that guide users through a process. Prompts can be used to provide tips, announcements, or links, but they cannot show users how to perform a task<sup>234</sup>.

**Custom build using Salesforce Flow:** This option requires coding and development skills, which may not be available or feasible for the admin team. Salesforce Flow is a tool that allows admins to automate processes and tasks using clicks or code. Flows can be triggered by various events, such as buttons, actions, schedules, or record changes. Flows can also display screens to users, which can contain fields, text, images, or components. However, screens are not the same as prompts or walkthroughs. Screens are part of a flow logic, and they require user input to proceed to the next step. Screens cannot be customized to appear as floating or docked prompts, and they cannot guide users through a Lightning page<sup>56</sup>.

**Basic In-App Guidance Prompts:** This option does not require a subscription to myTrailhead, but it also does not provide the functionality of walkthroughs. Basic in-app guidance prompts are the same as the ones mentioned in the first option, but without the customization and branding of myTrailhead. Basic prompts can be created and managed using clicks, not code, and they can be filtered by profiles and permissions. However, basic prompts are still single-step messages that appear on a Lightning page, and they cannot show users how to perform a task<sup>23</sup>.

### 36. Frage

A UX Designer has been asked to improve Salesforce adoption among sales representatives at Cloud Kicks. After conducting stakeholder and user interviews, the designer finds there is no clear, consistent sales process.

What should the designer do next?

- A. Conduct a workshop with stakeholders to align on the current state and build consensus.
- B. Log the findings and move forward with presenting possible solutions.
- C. Tell the customer they need to improve operations before any work can be done.
- D. Recommend Field Level Validation to ensure users are entering the correct data.

**Antwort: A**

**Begründung:**

A UX designer's role is not only to design solutions, but also to facilitate collaboration and communication among stakeholders and users. A clear, consistent sales process is essential for Salesforce adoption, as it defines the steps and actions that sales representatives need to take to close deals. Without a common understanding of the sales process, the UX designer cannot design a Salesforce solution that meets the needs and expectations of the users and the business. Therefore, the designer should conduct a workshop with stakeholders to align on the current state and build consensus on the desired future state. A workshop is an interactive session where the designer can use various techniques, such as journey mapping, persona creation, user stories, and prioritization, to elicit the pain points, goals, and requirements of the stakeholders and users. A workshop can also help the designer

to establish trust and rapport with the participants, and to gain their buy-in and feedback for the proposed solution<sup>1</sup>.Salesforce Adoption Strategies | Salesforce Trailhead,6 Guiding Principles to Maximize Your Salesforce Adoption | Salesforce Admins

### 37. Frage

A UX Designer wants to adopt scalability and consistency by no longer hard-coding values in designs, such as hex values for colors and pixel values for spacing.

What should be used or created to leverage named entities that apply design attributes to components and applications?

- A. Design Patterns
- **B. Design Tokens**
- C. Utility Classes

**Antwort: B**

Begründung:

Design tokens are the visual design atoms of the design system - specifically, they are named entities that store visual design attributes. We use them in place of hard-coded values (such as hex values for color or pixel values for spacing) in order to maintain a scalable and consistent visual system for UI development<sup>1</sup>. Design tokens are available for different platforms and frameworks, such as Lightning Web Components, Aura Components, CSS, iOS, and Android<sup>2</sup>. Design tokens can be customized to apply branding and theming to components and applications<sup>3</sup>. Utility classes are CSS classes that provide common styling properties, such as margins, padding, borders, and text alignment<sup>1</sup>. Design patterns are reusable solutions to common design problems, such as navigation, forms, and data visualization. ### 38. Frage

Cloud Kicks is planning its Einstein Bot implementation and has identified common issues the Bot can resolve. CK has determined that extensive technical planning is needed for bot effectiveness and customer satisfaction.

- A. voice and tone planning
- **B. user interface planning**
- C. deboarding planning
- D. Training and support for planning

**Antwort: B**

Begründung:

User interface planning is an essential part of the Einstein Bot implementation process, as it involves designing the bot's appearance, behavior, and interactions with the customers. User interface planning can affect the bot's effectiveness and customer satisfaction, as it can influence the clarity, efficiency, consistency, and beauty of the bot's experience. User interface planning includes<sup>1</sup>:  
Choosing a bot avatar and name that match the brand and tone of the company  
Configuring the bot greeting and fallback messages that set the expectations and boundaries of the bot's capabilities  
Designing the bot dialogues and menus that guide the customers through the conversation and provide relevant options and information  
Testing and iterating the bot user interface based on user feedback and analytics

### 39. Frage

A UX designer has been asked to improve Salesforce adoption among sales representatives at Cloud Kicks after conducting stakeholder and user interviews. The designer finds there is no clear consistent sales process. What should the designer do next?

- A. lock the findings and move forward with presenting possible solutions
- B. recommend field level validation to ensure users are entering the correct data
- **C. conduct a workshop with stakeholders to align on correct state and build consensus**
- D. Tell the customer they need to improve operations before any work can be done

**Antwort: C**

Begründung:

A UX designer who has been asked to improve Salesforce adoption among sales representatives at Cloud Kicks should conduct a

workshop with stakeholders to align on the current state and build consensus as the next step after finding out that there is no clear and consistent sales process. This is because:

A clear and consistent sales process is essential for defining the user needs, goals, and pain points, as well as the business requirements, objectives, and metrics. Without a clear and consistent sales process, the UX designer cannot design a user-centric and value-driven solution that meets the expectations and needs of both the users and the stakeholders.

A workshop with stakeholders can help the UX designer to understand the existing sales process, identify the gaps, challenges, and opportunities, and facilitate a collaborative and participatory approach to define the desired future state and agree on the best practices and standards for the sales process. A workshop can also help to establish trust, rapport, and buy-in among the stakeholders, and ensure that they are aligned and committed to the project vision and goals.

A workshop with stakeholders can also help the UX designer to gather feedback, input, and validation from the key decision-makers and influencers, and incorporate them into the design process. A workshop can also help to communicate the value proposition and benefits of Salesforce adoption, and address any concerns, questions, or resistance that the stakeholders may have.
