CrowdStrike Certified SIEM Engineer Sample Questions (Q54-Q59):

NEW QUESTION # 54

Which default parser would you use to parse the log event below?

Jan 15 14:22:07 host1 sshd[1234]: Failed login

- A. JSON
- B. Syslog
- C. Regex
- D. Key-value

Answer: B

Explanation:

The correct answer is D. Syslog . The sample log follows classic syslog structure: a syslog-style timestamp, hostname, process name with PID, and message body. CrowdStrike's LogScale Collector documentation includes Syslog as a source/parser context for logs of this format, making Syslog the appropriate default parser choice here.

NEW QUESTION # 55

You find a Falcon Log Collector instance on a Linux system that is not connected to Fleet Management. What command would you use to enroll the Falcon Log Collector?

- A. "C:\Program Files (x86)\CrowdStrike\Humio Log Collector\humio-log-collector.exe" enroll < TOKEN >
- B. sudo humio-log-collector --token < TOKEN > enroll
- C. sudo humio-log-collector enroll < TOKEN >
- D. sudo logscale-collector enroll < TOKEN >

Answer: D

Explanation:

The correct answer is B. sudo logscale-collector enroll < TOKEN > .

Current CrowdStrike LogScale Collector documentation shows the enrollment command using the logscale- collector binary. For example, the macOS custom installation page explicitly shows:

```
sudo logscale-collector enroll enrolltoken
```

The Fleet Management enrollment documentation also explains that you copy the enrollment command from the UI and run it on the machine hosting the collector.

Why the other options are incorrect:

A is a Windows path, not Linux. C reflects the older humio-log-collector naming that existed in earlier versions and release history, but the current docs use logscale-collector for the enrollment command. D does not match the documented command syntax. CrowdStrike's current documentation centers the enrollment workflow on logscale-collector enroll < token > .

NEW QUESTION # 56

A parser needs to preserve the original third-party field name and also map it to an ECS-compatible field. What is the best approach?

- A. Store both values only in @rawstring
- B. Rename the original field to the ECS field
- C. Delete the original field after mapping
- D. Keep the original Vendor field and assign its value to a new ECS field

Answer: D

Explanation:

A CPS-compliant approach keeps the original Vendor field while also assigning the value to a normalized ECS field. This preserves source fidelity and enables standardized search and detections. Renaming away the original field loses source context, and storing only in @rawstring prevents structured analysis.

NEW QUESTION # 57

What is true about first-party data from the Falcon platform and its integration into Next-Gen SIEM?

- A. It is quickly ingested to Next-Gen SIEM via a third-party integration
- B. First-party data requires a log collector installation
- C. It is instantly accessible within Next-Gen SIEM

Answer: C

Explanation:

The correct answer is C. It is instantly accessible within Next-Gen SIEM .

CrowdStrike states that Falcon Next-Gen SIEM provides instant availability of first-party data , including native CrowdStrike telemetry such as endpoint, cloud, and identity data. This means first-party Falcon data does not require a separate onboarding step

like third-party sources often do.

Why the other options are incorrect:

A is incorrect because first-party Falcon telemetry does not require a separate log collector installation to become available inside the platform. B is incorrect because the question is about first-party data, not third-party integration. CrowdStrike distinguishes native Falcon telemetry from externally integrated log sources.

NEW QUESTION # 58

Which sequence correctly describes the process for duplicating a workflow in Fusion SOAR?

- A. Go to Fusion SOAR > Fusion SOAR > Workflows > Click Open (three dots) menu for the workflow you want to duplicate > Click "Duplicate workflow" > Update and rename the duplicated workflow > Click Save and exit to save the updated workflow
- B. Go to Fusion SOAR > Fusion SOAR > Workflows > Find the workflow to duplicate > Click the workflow name > Select "Duplicate" from Actions menu > Edit the workflow configuration > Click "Create" to generate the new workflow > Set Status to On
- C. Go to Fusion SOAR > Workflow Management > Select "All Workflows" tab > Right-click on the workflow to duplicate > Select "Clone Workflow" > Modify workflow parameters > Click "Validate" > Set workflow status > Click Apply Changes
- D. Go to Fusion SOAR > Fusion SOAR > Workflows > Select the checkbox next to the workflow you want to duplicate > Click "Actions" at the top of the page > Select "Create Copy" > Edit workflow name and description > Configure trigger conditions > Click Next > Review workflow canvas > Click Finish

Answer: A

Explanation:

The correct answer is C . CrowdStrike Fusion SOAR workflow management uses the Workflows page as the central location for workflow operations, and workflow editing actions are performed from the workflow's action menu. The duplicate process aligns with opening the workflow options menu, selecting Duplicate workflow , updating the duplicated workflow, and then using Save and exit to preserve the changes. This sequence reflects the expected workflow-management flow in Falcon Fusion SOAR.
