Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q543-Q548):

NEW QUESTION # 543
A company has an AWS account used for software engineering. The AWS account has access to the company's on-premises data center through a pair of AWS Direct Connect connections. All non-VPC traffic routes to the virtual private gateway.

A development team recently created an AWS Lambada function through the console. The development team needs to allow the function to access a database that runs in a private subnet in the company's data center.

Which solution will meet these requirements?

- A. Configure the Lambda function to run in the VPC with the appropriate security group.
- B. Create an Elastic IP address. Configure the Lambda function to send traffic through the Elastic IP address without an elastic network interface.
- C. Update the route tables in the VPC to allow the Lambda function to access the on-premises data center through direct connect.
- D. Set up a VPN connection from AWS to the data center. Route the traffic from the Lambda function through the VPN

Answer: C

NEW QUESTION # 544

A media company runs an application on multiple Amazon EC2 instances that requires high storage input
/output operations per second (IOPS).

To achieve the necessary performance, a solutions architect wants to stripe multiple Amazon EBS volumes together and attach the volumes to EC2 instances. The solutions architect wants to receive a notification when IOPS are over-provisioned.

Which solution will meet these requirements?

- A. Adjust the IOPS of each EBS volume daily based on Amazon CloudWatch metrics for IOPS utilization.
- B. Create a custom AWS Config rule to monitor the provisioned IOPS for the EBS volumes that are attached to the EC2 instances and to send notifications.
- C. Deploy the application on an EC2 instance type that supports the highest possible IOPS.
- D. Configure auto scaling for the EBS volumes to automatically increase or decrease IOPS based on the EC2 instance CPU utilization metric.

Answer: B

Explanation:
AWS Config allows for creation of custom rules to monitor EBS configurations. Combined with CloudWatch metrics and Amazon SNS, custom rules can track over-provisioned IOPS and send alerts when thresholds are breached, allowing proactive cost and performance management.

NEW QUESTION # 545

A developer has an application that uses an AWS Lambda function to upload files to Amazon S3 and needs the required permissions to perform the task The developer already has an IAM user with valid IAM credentials required for Amazon S3 What should a solutions architect do to grant the permissions?

- A. Create an IAM execution role with the required permissions and attach the IAM rote to the Lambda function
- B. Create a new IAM user and use the existing IAM credentials in the Lambda function.
- C. Add required IAM permissions in the resource policy of the Lambda function
- D. Create a signed request using the existing IAM credentials n the Lambda function

Answer: A

Explanation:
Explanation
To grant the necessary permissions to an AWS Lambda function to upload files to Amazon S3, a solutions architect should create an IAM execution role with the required permissions and attach the IAM role to the Lambda function. This approach follows the principle of least privilege and ensures that the Lambda function can only access the resources it needs to perform its specific task.

NEW QUESTION # 546

A company built an application based on AWS Lambda deployed in an AWS CloudFormation stack. The last production release of the web application introduced an issue that resulted in an outage lasting several minutes. A solutions architect must adjust the deployment process to support a canary release.

Which solution will meet these requirements?

- A. Configure AWS CodeDeploy and use CodeDeployDefault.OneAtATime in the Deployment configuration to distribute the load.
- B. Deploy the application into a new CloudFormation stack. Use an Amazon Route 53 weighted routing policy to distribute the load.
- C. Create an alias for every new deployed version of the Lambda function. Use the AWS CLI update-alias command with the routing-config parameter to distribute the load.
- D. Create a version for every new deployed Lambda function. Use the AWS CLI update-function- configuration command with the routing-config parameter to distribute the load.

Answer: D

NEW QUESTION # 547

Which of the below mentioned options is not available when an instance is launched by Auto Scaling with EC2 Classic?

- A. Private DNS
- B. Public IP
- C. Elastic IP
- D. Private IP

Answer: C

Explanation:
Auto Scaling supports both EC2 classic and EC2-VPC. When an instance is launched as a part of EC2 classic, it will have the public IP and DNS as well as the private IP and DNS.
