

# Free PDF Quiz Amazon - AWS-Solutions-Architect-Professional - Accurate AWS Certified Solutions Architect - Professional Test Dump

P.S. Free 2023 Amazon AWS-Solutions-Architect-Professional dumps are available on Google Drive shared by TorrentValid:

<https://drive.google.com/open?id=1TH0Y7zHq62dz8VArFuSpE2y0BLTYEmaD>

Quality of AWS-Solutions-Architect-Professional learning quiz you purchased is of prior importance for consumers. Our AWS-Solutions-Architect-Professional practice materials are like guns in your battle. So far, we have helped lots of candidates get success by using our valid and accurate AWS-Solutions-Architect-Professional latest VCE collection, Amazon AWS-Solutions-Architect-Professional Quiz Best exam preparation files help you success. Come and choose us, AWS-Solutions-Architect-Professional dumps VCE will be your best helper.

If you can own the certification means that

(<https://www.torrentvalid.com/aws-certified-solutions-architect-professional-dumps-torrent-8540.htm>) you can do the job well in the area so you can get easy and quick promotion. Creveling holds a B.S. The misleading knowledge [AWS-Solutions-Architect-Professional Reliable Mock Test](#) that can replace the sober criticism that is a true laxative also captivated people.

The academic literature is mixed on whether the net effect of raising the minimum wage is positive or negative. Composing and Training the Model. Quality of AWS-Solutions-Architect-Professional learning quiz you purchased is of prior importance for consumers.

Our AWS-Solutions-Architect-Professional practice materials are like guns in your battle. So far, we have helped lots of candidates get success by using our valid and accurate AWS-Solutions-Architect-Professional latest VCE collection.   
AWS-Solutions-Architect-Professional Quiz, Authorized AWS-Solutions-Architect-Professional Test Dumps

AWS-Solutions-Architect-Professional Reliable Mock Test

BONUS!!! Download part of PracticeDump AWS-Solutions-Architect-Professional dumps for free: <https://drive.google.com/open?id=1BoMfDyHPCqXGmzMfjHuMQx8YSxwgE8Dz>

Getting the AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) certification will highly expand your expertise. To achieve the AWS-Solutions-Architect-Professional certification you need to prepare well. AWS-Solutions-Architect-Professional exam dumps are a great way to assess your skills and abilities. AWS-Solutions-Architect-Professional Questions can help you identify your strengths and weaknesses and better understand what you're good at. You should take a AWS-Solutions-Architect-Professional Practice Exam to prepare for the AWS Certified Solutions Architect - Professional (AWS-Solutions-Architect-Professional) certification exam. With AWS-Solutions-Architect-Professional exam preparation software, you can practice your skills and improve your performance.

The paper materials students buy on the market are often not able to reuse. After all the exercises have been done once, if you want to do it again you will need to buy it again. But with AWS-Solutions-Architect-Professional test question, you will not have this problem. All customers who purchased AWS-Solutions-Architect-Professional Study Tool can use the learning materials without restrictions, and there is no case of duplicate charges. For the PDF version of AWS-Solutions-Architect-Professional test question, you can print multiple times, practice multiple times, and repeatedly reinforce your unfamiliar knowledge.

## Amazon AWS-Solutions-Architect-Professional Accurate Prep Material - Latest AWS-Solutions-Architect-Professional Learning Materials

This Amazon AWS-Solutions-Architect-Professional exam preparation material is important because it will help you cover each topic and understand it well. You cannot pass the AWS-Solutions-Architect-Professional exam if you do not have real AWS-Solutions-Architect-Professional exam questions. It is the foremost thing that everyone should have to nail the AWS-Solutions-Architect-Professional Exam. The AWS-Solutions-Architect-Professional practice test material of PracticeDump is available in web-based practice tests, desktop practice exam software, and PDF.

The AWS Certified Solutions Architect – Professional exam is a challenging but rewarding certification that can help professionals further their careers in cloud computing. With the demand for cloud services and solutions continuing to grow, this certification can provide a competitive advantage and help professionals stay ahead of the curve in this dynamic and rapidly evolving industry.

### Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q24-Q29):

#### NEW QUESTION # 24

A North American company with headquarters on the East Coast is deploying a new web application running on Amazon EC2 in the us-east-1 Region. The application should dynamically scale to meet user demand and maintain resiliency. Additionally, the application must have disaster recovery capabilities in an active-passive configuration with the us-west-1 Region. Which steps should a solutions architect take after creating a VPC in the us-east-1 Region?

- A. Deploy an Application Load Balancer (ALB) spanning multiple Availability Zones (AZs) to the VPC in the us-east-1 Region. Deploy EC2 instances across multiple AZs as part of an Auto Scaling group served by the ALB. Deploy the same solution to the us-west-1 Region. Create separate Amazon Route 53 records in each Region that point to the ALB in the Region. Use Route 53 health checks to provide high availability across both Regions.
- B. Create a VPC in the us-west-1 Region. Use inter-Region VPC peering to connect both VPCs. Deploy an Application Load Balancer (ALB) spanning multiple Availability Zones (AZs) to the VPC in the us-east-1 Region. Deploy EC2 instances across multiple AZs in each Region as part of an Auto Scaling group spanning both VPCs and served by the ALB.
- **C. Deploy an Application Load Balancer (ALB) spanning multiple Availability Zones (AZs) to the VPC in the us-east-1 Region. Deploy EC2 instances across multiple AZs as part of an Auto Scaling group served by the ALB. Deploy the same solution to the us-west-1 Region. Create an Amazon Route 53 record set with a failover routing policy and health checks enabled to provide high availability across both Regions.**
- D. Create a VPC in the us-west-1 Region. Use inter-Region VPC peering to connect both VPCs. Deploy an Application Load Balancer (ALB) that spans both VPCs. Deploy EC2 instances across multiple Availability Zones as part of an Auto Scaling group in each VPC served by the ALB. Create an Amazon Route 53 record that points to the ALB.

**Answer: C**

#### NEW QUESTION # 25

In CloudFormation, if you want to map an Amazon Elastic Block Store to an Amazon EC2 instance, \_\_\_\_\_.

- A. you reference the physical IDs of both the block stores and the instance
- B. you reference the physical IDs of the instance along with the resource type
- C. you reference the instance IDs of the block store along with the resource properties
- **D. you reference the logical IDs to associate the block stores with the instance**

**Answer: D**

Explanation:

In AWS CloudFormation, if you want to map an Amazon Elastic Block Store to an Amazon EC2 instance, you reference the logical IDs to associate the block stores with the instance.

<http://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/concept-resources.html>

### NEW QUESTION # 26

A Solutions Architect is designing the storage layer for a data warehousing application. The data files are large, but they have statically placed metadata at the beginning of each file that describes the size and placement of the file's index. The data files are read in by a fleet of Amazon EC2 instances that store the index size, index location, and other category information about the data file in a database. That database is used by Amazon EMR to group files together for deeper analysis. What would be the MOST cost-effective, high availability storage solution for this workflow?

- A. Store the data files in Amazon EFS mounted by the EC2 fleet and EMR nodes.
- **B. Store the data files on Amazon EBS volumes and allow the EC2 fleet and EMR to mount and unmount the volumes where they are needed.**
- C. Store the data files in Amazon S3 and use Range GET for each file's metadata, then index the relevant data.
- D. Store the content of the data files in Amazon DynamoDB tables with the metadata, index, and data as their own keys.

**Answer: B**

### NEW QUESTION # 27

A company is migrating an application to the AWS Cloud. The application runs in an on-premises data center and writes thousands of images into a mounted NFS file system each night. After the company migrates the application, the company will host the application on an Amazon EC2 instance with a mounted Amazon Elastic File System (Amazon EFS) file system. The company has established an AWS Direct Connect connection to AWS. Before the migration cutover, a solutions architect must build a process that will replicate the newly created on-premises images to the EFS file system. What is the MOST operationally efficient way to replicate the images?

- A. Deploy an AWS DataSync agent to an on-premises server that has access to the NFS file system. Send data over the Direct Connect connection to an AWS PrivateLink interface VPC endpoint for Amazon EFS by using a private VIF. Configure a DataSync scheduled task to send the images to the EFS file system every 24 hours.
- **B. Configure a periodic process to run the `aws s3 sync` command from the on-premises file system to Amazon S3. Configure an AWS Lambda function to process event notifications from Amazon S3 and copy the images from Amazon S3 to the EFS file system.**
- C. Deploy an AWS DataSync agent to an on-premises server that has access to the NFS file system. Send data over the Direct Connect connection to an S3 bucket by using a public VIF. Configure an AWS Lambda function to process event notifications from Amazon S3 and copy the images from Amazon S3 to the EFS file system.
- D. Deploy an AWS Storage Gateway file gateway with an NFS mount point. Mount the file gateway file system on the on-premises server. Configure a process to periodically copy the images to the mount point.

**Answer: B**

### NEW QUESTION # 28

A company ingests and processes streaming market data. The data rate is constant. A nightly process that calculates aggregate statistics is run, and each execution takes about 4 hours to complete. The statistical analysis is not mission critical to the business, and previous data points are picked up on the next execution if a particular run fails.

The current architecture uses a pool of Amazon EC2 Reserved Instances with 1-year reservations running full time to ingest and store the streaming data in attached Amazon EBS volumes. On-Demand EC2 instances are launched each night to perform the nightly processing, accessing the stored data from NFS shares on the ingestion servers, and terminating the nightly processing servers when complete. The Reserved Instance reservations are expiring, and the company needs to determine whether to purchase new reservations or implement a new design.

Which is the most cost-effective design?

- A. Update the ingestion process to use Amazon Kinesis Data Firehose to save data to Amazon Redshift. Use an AWS Lambda function scheduled to run nightly with Amazon CloudWatch Events to query Amazon Redshift to generate the daily statistics.
- B. Update the ingestion process to use Amazon Kinesis Data Firehose to save data to Amazon S3. Use a fleet of On-Demand EC2 instances that launches each night to perform the batch processing of the S3 data and terminates when the processing completes.
- **C. Update the ingestion process to use Amazon Kinesis Data Firehose to save data to Amazon S3. Use AWS Batch to perform nightly processing with a Spot market bid of 50% of the On-Demand price.**
- D. Update the ingestion process to use a fleet of EC2 Reserved Instances behind a Network Load Balancer with 3-year leases. Use Batch with Spot instances with a maximum bid of 50% of the On-Demand price for the nightly processing.

**Answer: C**

Explanation:

A: On demand instances is more expensive.

B: Since the analysis is not mission critical and can be restarted, spot instances is cheaper.

C: EC2 is more expensive.

D: Compared to B Lambda should be cheaper to Batch using spot instances which ultimately still charges based on EC2 pricing. But critical thing is Lambda cannot go beyond 15 minutes of execution time. So it is more for simple processing and in this case it is not. It takes 4 hours.
