BCS PC-BA-FBA-20 認定試験の出題範囲：

トピック	出題範囲
トピック 1	Validating and Managing Requirements: This section of the exam measures the skills of Business Analysts and focuses on requirement validation and change control. Candidates must understand traceability concepts, horizontal and vertical tracking, and how to manage requirement changes. One essential skill tested is ensuring that requirements remain accurate and aligned with business objectives throughout the project lifecycle.
トピック 2	Defining the Solution: This section of the exam measures the skills of Business Analysts and focuses on identifying gaps between current and target business states. Candidates must use techniques such as gap analysis and the POPIT™ framework. The syllabus also covers the process of developing solution options through brainstorming and creative thinking. One key skill assessed is formulating viable solutions that align with business needs.

トピック 3	Delivering the Business Solution: This section of the exam measures the skills of Business Analysts and focuses on the business change lifecycle. Candidates must understand the role of the analyst in design, development, testing, and implementation. The syllabus also introduces transition and migration strategies, such as phased and big-bang rollouts. One critical skill assessed is managing change effectively to ensure a smooth transition to new business solutions.
トピック 4	The Competencies of a Business Analyst: This section of the exam measures the skills of Junior Business Analysts and explores the key competencies required for success. It introduces the concept of a T-shaped professional, emphasizing expertise in business analysis while maintaining a broad range of supporting skills. Candidates must also understand the three key competency areas: personal qualities, business knowledge, and professional techniques. One key skill assessed is identifying how these competencies contribute to successful business analysis.
トピック 5	- Analyzing and Managing Stakeholders: This section of the exam measures the skills of Change Managers and emphasizes stakeholder management techniques. Candidates must identify stakeholder categories using the stakeholder wheel and apply tools like the Power - Interest Grid to determine engagement strategies. The RACI matrix is also introduced for defining stakeholder responsibilities. One key skill assessed is mapping stakeholders and determining their level of influence and engagement.
トピック 6	The Business Analysis Service Framework: This section of the exam measures the skills of Project Managers and outlines the Business Analysis Service Framework (BASF). Candidates will learn about essential activities, including situation investigation, feasibility assessment, business process improvement, stakeholder engagement, and change management. One key skill tested is recognizing the role of business analysts in different project phases.
トピック 7	Documenting and Modeling Requirements: This section of the exam measures the skills of Business Analysts and introduces methods for structuring and documenting requirements. Candidates must be familiar with text-based and diagrammatic techniques such as use-case models, data models, and business process models. One key skill tested is creating comprehensive and clear documentation that supports business solutions.
トピック 8	The Strategic Context for Business Analysis: This section of the exam measures the skills of Business Analysts and focuses on the strategic aspects of business analysis. Candidates must analyze external factors using the PESTLE framework and internal strategies through the VMOST technique. The syllabus also includes a SWOT analysis for identifying business strengths, weaknesses, opportunities, and threats. One critical skill assessed is evaluating an organization's business strategy and aligning business analysis with corporate objectives.
トピック 9	Investigating the Business Situation: This section of the exam measures the skills of Business Analysts and covers various techniques for analyzing business situations. Candidates must be familiar with methods such as workshops, observation, interviews, prototyping, and surveys. These techniques help in gathering stakeholder perspectives and understanding organizational challenges. One essential skill tested is selecting the most effective technique based on the business context.
トピック 10	Establishing the Requirements: This section of the exam measures the skills of Business Analysts and covers requirements engineering (RE) processes. Candidates must recognize different requirement types, including business, functional, and non-functional requirements. The syllabus also covers elicitation techniques such as interviews, workshops, and prototyping. One essential skill assessed is gathering and defining high-quality business requirements.
トピック 11	Improving Business Services and Processes: This section of the exam measures the skills of Business Analysts and focuses on business process improvement. Candidates must understand business process hierarchy, event-response models, and actor-task analysis. The syllabus also introduces techniques such as SIPOC, value chain analysis, and process modeling. One essential skill tested is analyzing business processes to identify inefficiencies and recommend improvements.
