The prospective clients can examine the format and quality of our NCP-US exam braindumps before placing order for the product. As you may find on our website, we have three different versions of our NCP-US study questions: the PDF, Software and APP online. Accordingly, we have three different demos for you to free download. And not only the content of the demos is the same with the three versions, but also the displays are the same with the according version of our NCP-US learning guide.

The NCP-US Exam covers a range of topics related to Nutanix storage solutions, including data protection, cluster management, storage administration, and configuration management. Candidates who pass the exam will have demonstrated their ability to work with Nutanix storage solutions in a variety of environments, from small businesses to large enterprises. NCP-US exam is designed to be challenging, but also fair and comprehensive, ensuring that only those who have a deep understanding of Nutanix storage solutions are able to pass.

Nutanix NCP-US v6 certification exam is an advanced-level certification that is designed to validate the skills and knowledge required to design, implement, and manage Nutanix solutions with a focus on unified storage. Nutanix Certified Professional - Unified Storage v6.5 certification exam covers a wide range of topics, including the architecture and components of Nutanix storage solutions, the deployment of Nutanix storage solutions, the configuration of storage services, and the management of Nutanix storage solutions. Nutanix Certified Professional - Unified Storage v6.5 certification is recognized globally and is designed to help IT professionals to expand their skills and knowledge on Nutanix unified storage solutions.

## Free PDF Quiz Nutanix - Fantastic NCP-US Current Exam Content

Test your knowledge of the NCP-US exam dumps with Nutanix NCP-US practice questions. The software is designed to help with NCP-US exam dumps preparation. NCP-US practice test software can be used on devices that range from mobile devices to desktop computers. We provide the NCP-US Exam Questions in a variety of formats, including a web-based practice test, desktop practice exam software, and downloadable PDF files.

Nutanix Certified Professional - Unified Storage (NCP-US) v6 exam is an essential certification for IT professionals who want to demonstrate their expertise in Nutanix storage solutions. NCP-US Exam validates the knowledge and skills required to design, implement, and support Nutanix storage services, including data protection, disaster recovery, and storage optimization. With this certification, IT professionals can enhance their career prospects and demonstrate their commitment to staying up-to-date with the latest technologies and best practices.

### Nutanix Certified Professional - Unified Storage v6.5 Sample Questions (Q62-Q67):

#### NEW QUESTION # 62

An administrator is upgrading Files. When running the preupgrade check, the following message is generated:  
Fileserver in HA state

Which two steps should the administrator take to resolve this error message? (Choose two.)

- A. Verify FSVM is booted and not stuck.
- B. Check if Zookeeper services are running.
- C. Check if Stargate services are running.
- D. Check for alerts for NVM being down.

**Answer: A,B**

Explanation:

These steps are based on a guide from Nutanix on how to troubleshoot pre-upgrade checks failure for Nutanix Files<sup>1</sup>. The guide states that one possible cause of this error message is that Nutanix files node (fsvms) might not be up or accessible<sup>1</sup>. The guide also suggests checking if Zookeeper services are running on all FSVMs as part of the troubleshooting process<sup>1</sup>.

#### NEW QUESTION # 63

An administrator of an existing Nutanix cluster running Kubernetes with multiple PODs notices that NCC checks report that some volume groups experience the following error:

Node x .x.x.x:

FAIL: Volume Group pvc -XXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXX space usage (908) The administrator checks the volume group usage from the Kubernetes pod and get different usage results. The current stats are 55% used disk space.

The results of the NCC check do not match what manually-executed checks report.

What is the cause of this behavior?

- A. The NCC checks need to be updated to the latest version.
- B. The garbage collection process has yet to run.
- C. Kubernetes is not correctly reporting its storage usage
- D. Volumes has not received the needed uNMAP commands.

**Answer: B**

Explanation:

The garbage collection process is performed by Curator, a service that runs on Nutanix clusters and is responsible for cleaning up unused data and reclaiming space<sup>2</sup>. Curator scans run periodically in the background and can be monitored from Prism<sup>2</sup>.

<https://next.nutanix.com/how-it-works-22/ncc-health-check-garbage-egroups-39097>

#### NEW QUESTION # 64

Which two options show the correct minimum configurations when deploying Nutanix File servers? (Choose two.)

- A. The minimum number of FSVMs is three.
- B. A minimum of eight vCPUs per FSVM.
- C. The number of CVMs must be equal to or greater than the number of file server VMs (FSVMs).
- D. A minimum of 12 GiB of memory per FSVM.

**Answer: A,D**

#### NEW QUESTION # 65

Why should an administrator avoid allocating over half the RAM on a host to a FSVM?

- A. The FSVM would experience host swapping of memory.
- B. The FSVM would be in a single NUMA node boundary.
- C. The FSVM has a set memory configuration.
- D. The FSVM would cross NUMA node boundaries.

**Answer: D**

Explanation:

The administrator should avoid allocating over half the RAM on a host to a FSVM because the FSVM would cross NUMA node boundaries (option A).

NUMA (Non-Uniform Memory Access) is a memory architecture that divides the system memory into multiple regions that are assigned to different processors or cores.

If a FSVM crosses NUMA node boundaries, it will have to access memory from different regions, which will result in higher latency and lower performance for file operations.

To avoid this issue, the administrator should ensure that the FSVM memory allocation is within a single NUMA node boundary.

#### NEW QUESTION # 66

What is the most likely cause no Prism Element clusters are listed when trying to create a new object store?

- A. The administrator did not manually sync Prism Element to Prism Central after registration.
- B. Prism Element has not yet completed synchronization with Prism Central.
- C. Prism Element cluster CVMs must be restarted after registration.
- D. Although Prism Element is registered, object stores cannot be added via Prism Central.

**Answer: B**

#### NEW QUESTION # 67
