The Salesforce Identity-and-Access-Management-Architect certification is a valuable credential that plays a significant role in advancing the Salesforce professional's career in the tech industry. With the Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) certification exam you can demonstrate your skills and knowledge level and get solid proof of your expertise. You can use this proof to advance your career. The Salesforce Identity-and-Access-Management-Architect Certification Exam enables you to increase job opportunities, promotes professional development, and higher salary potential, and helps you to gain a competitive edge in your job search.

Salesforce Certified Identity and Access Management Architect exam covers a range of topics including Salesforce security models, authentication protocols, authorization and access controls, user provisioning, and identity federation. Candidates must demonstrate their ability to design and implement secure and scalable identity and access management solutions that align with industry best practices, as well as Salesforce's own security standards.

Salesforce Certified Identity and Access Management Architect certification exam is a comprehensive test that requires extensive knowledge and skills on various identity and access management topics. It covers areas such as identity governance, authentication and authorization, identity federation, identity and access lifecycle management, and identity and access analytics. Passing the exam demonstrates that an individual has the technical skills, knowledge, and experience needed to design, implement, and manage identity and access management solutions in Salesforce, making them a valuable asset to any organization that uses Salesforce.

Identity-and-Access-Management-Architect Test Questions - Identity-and-Access-Management-Architect Valid Test Cost

If you buy online classes, you will need to sit in front of your computer on time at the required time; if you participate in offline counseling, you may need to take an hour or two of a bus to attend class. But if you buy Identity-and-Access-Management-Architect test guide, things will become completely different. Unlike other learning materials on the market, Identity-and-Access-Management-Architect torrent prep has an APP version. You can download our app on your mobile phone. And then, you can learn anytime, anywhere. Whatever where you are, whatever what time it is, just an electronic device, you can do exercises. With Identity-and-Access-Management-Architect Torrent prep, you no longer have to put down the important tasks at hand in order to get to class; with Identity-and-Access-Management-Architect exam questions, you don't have to give up an appointment for study.

Salesforce Certified Identity and Access Management Architect exam covers a range of topics, including Salesforce identity and access management architecture, user authentication and authorization, identity federation, social sign-on, and single sign-on. Candidates are also expected to have a deep understanding of security standards and best practices, including OAuth, SAML, OpenID Connect, and multi-factor authentication. Identity-and-Access-Management-Architect Exam consists of 60 multiple-choice questions, and candidates have 105 minutes to complete it. Passing the exam requires a score of 67% or higher, and the certification is valid for two years. With this certification, individuals can demonstrate their expertise in identity and access management solutions using Salesforce technologies, making them valuable assets to organizations looking to secure their Salesforce environments.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q230-Q235):

NEW QUESTION # 230

A leading fitness tracker company is getting ready to launch a customer community. The company wants its customers to login to the community and connect their fitness device to their profile. Customers should be able to obtain exercise details and fitness recommendation in the community.

Which should be used to satisfy this requirement?

- A. Login Flows
- B. Single Sign-On Settings
- C. Named Credentials
- D. OAuth Device Flow

Answer: D

Explanation:

Explanation

OAuth Device Flow is a protocol that allows users to authenticate their devices, such as fitness trackers, smart TVs, or printers, with an external identity provider and access Salesforce resources. The device flow involves displaying a verification code and a URL on the device, which the user can use to log in and authorize the device from another device, such as a smartphone or a computer.

References: OAuth Device Flow, OAuth 2.0 Device Flow

NEW QUESTION # 231

Which two capabilities does My Domain enable in the context of a SAML SSO configuration? Choose 2 answers

- A. Resource deep linking
- B. SSO from Salesforce Mobile App
- C. App Launcher
- D. Login Forensics

Answer: A,B

NEW QUESTION # 232

Which two capabilities does My Domain enable in the context of a SAML SSO configuration? Choose 2 answers

- A. Resource deep linking
- B. SSO from Salesforce Mobile App
- C. App Launcher
- D. Login Forensics

Answer: A,B

Explanation:

These are two capabilities that My Domain enables in the context of a SAML SSO configuration. My Domain is a feature that lets you customize your Salesforce domain name and login page¹. Resource deep linking is the ability to access a specific page or resource within Salesforce directly from a link, without having to navigate through the app². SSO from Salesforce Mobile App is the ability to log in to the Salesforce Mobile App using your SSO credentials, without having to enter your username and password³.

My Domain enables these capabilities by allowing you to specify your identity provider (IdP) and SSO settings for your unique domain name, and by providing a custom login URL that can be used for deep linking and mobile app login¹.

The other options are not correct for this question because:

* App Launcher is a feature that lets you access all your connected apps from one place in Salesforce. It does not require My Domain or SAML SSO to work, although it can be enhanced by using them.

* Login Forensics is a feature that analyzes login behavior and identifies anomalous or suspicious logins.

It does not require My Domain or SAML SSO to work, although it can be used with them.

NEW QUESTION # 233

A global fitness equipment manufacturer is planning to sell fitness tracking devices and has the following requirements:

- 1) Customer purchases the device.
- 2) Customer registers the device using their mobile app.
- 3) A case should automatically be created in Salesforce and associated with the customer's account in cases where the device registers issues with tracking.

Which OAuth flow should be used to meet these requirements?

- **A. OAuth 2.0 Asset Token Flow**
- B. OAuth 2.0 User-Agent Flow
- C. OAuth 2.0 Username-Password Flow
- D. OAuth 2.0 SAML Bearer Assertion Flow

Answer: A

NEW QUESTION # 234

Northern Trail Outfitters manages functional group permissions in a custom security application supported by a relational database and a REST service layer. Group permissions are mapped as permission sets in Salesforce.

Which action should an identity architect use to ensure functional group permissions are reflected as permission set assignments?

- A. Use the Apex JIT handler to callout to the security application and set permission sets
- B. Use a Login Flow to query SAML attributes and set permission sets.
- C. Use the Apex Just-in-Time (JIT) handler to query the Security Assertion Markup Language (SAML) attributes and set permission sets.
- **D. Use a Login Flow with invocable Apex to callout to the security application and set permission sets.**

Answer: D

Explanation:

Using a Login Flow with invocable Apex to callout to the security application and set permission sets allows the identity architect to dynamically assign or remove permission sets based on the functional group permissions in the custom security application. This ensures that the permission set assignments are consistent with the group permissions. References: Login Flows, Invocable Apex
