

# Prepare Your Nutanix NCP-DB-6.10 Exam with Valid NCP-DB-6.10 Exam Dumps Demo Certainly

2026 Latest Free4Dump NCP-DB-6.10 PDF Dumps and NCP-DB-6.10 Exam Engine Free Share: <https://drive.google.com/open?id=1Gb1Qq1Ca6731jvxcZ4vldUMo07ZRwbCj>

About choosing the perfect NCP-DB-6.10 study material, it may be reflected in matters like quality, prices, after-sale services and so on. NCP-DB-6.10 exam simulation is accumulation of knowledge about the exam strictly based on the syllabus of the exam. They give users access to information and exam, offering simulative testing environment when you participate it like in the classroom. And if you are afraid of the lack experience of the exam, our NCP-DB-6.10 Practice Engine will be your good choice.

We guarantee that if you study our NCP-DB-6.10 guide materials with dedication and enthusiasm step by step, you will desperately pass the exam without doubt. As the authoritative provider of study materials, we are always in pursuit of high pass rate of NCP-DB-6.10 Practice Test compared with our counterparts to gain more attention from potential customers. We believe in the future, our NCP-DB-6.10 study torrent will be more attractive and marvelous with high pass rate.

## Free PDF Quiz Nutanix - Pass-Sure NCP-DB-6.10 - Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Exam Dumps Demo

The web-based NCP-DB-6.10 practice test is accessible via any browser. This NCP-DB-6.10 mock exam simulates the actual Nutanix NCP-DB-6.10 exam and does not require any software or plugins. Compatible with iOS, Mac, Android, and Windows operating systems, it provides all the features of the desktop-based NCP-DB-6.10 Practice Exam software.

## Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q22-Q27):

### NEW QUESTION # 22

What step should be taken to make the profile available to all users:

- A. Create an Access Control role with the Create Profile right and assign to all users.
- **B. Update the profile and set available state to All.**
- C. Create an Access Control group with the desired users and grant it the Database Admin role.
- D. Update the profile and set the status to Published.

**Answer: B**

Explanation:

The correct answer is D because it allows the administrator to make the profile available to all users without requiring any additional

permissions or roles. A profile is a collection of settings that define how NDB manages a database server or a database. By default, a profile is only available to the user who created it and the Database Admin role. To make a profile available to all users, the administrator can update the profile and set the available state to All. This will enable all users to view and use the profile for their database operations. The other options are not correct because they either require additional steps or do not achieve the desired outcome. Option A is not correct because creating an Access Control role with the Create Profile right and assigning it to all users will only allow them to create their own profiles, not use the existing one. Option B is not correct because creating an Access Control group with the desired users and granting it the Database Admin role will only make the profile available to those users, not all users. Option C is not correct because updating the profile and setting the status to Published will not change the availability of the profile, only the state of the profile. A published profile is a profile that has been tested and verified by the administrator and is ready for use. A draft profile is a profile that is still under development or testing and is not ready for use.

### NEW QUESTION # 23

An administrator needs to provision a database for test purposes with a data protection policy that minimizes storage usage. How should the administrator best complete this task?

- A. Create a SLA that only leverages zero-byte snapshots.
- **B. Select the built-in NONE SLA that is configured for no snapshot or log backup.**
- C. Disable the SLA for this database during provisioning.
- D. Create a custom SLA for this database that only retains 1 day of snapshots and logs.

**Answer: B**

Explanation:

Nutanix Database Automation (NCP-DB) allows administrators to manage Service Level Agreements (SLAs) for databases. These SLAs define the data protection policies for databases.

In this case, to minimize storage usage for a test database, the administrator should select the built-in NONE SLA. This SLA is configured for no snapshot or log backup, thus minimizing storage usage.

### NEW QUESTION # 24

It becomes necessary to remove an existing database clone. "To minimize the impact of that removal to users, an administrator would like to schedule this operation for weekend hours. When scheduling this removal, other than the specified date/time, which option in the Update Removal Schedule is pre-selected as non-optional?"

- **A. Delete supporting snapshot from NDB.**
- B. Create an alert before removal.
- C. Unregister the database clone from NDB.
- D. Delete the database clone from the VM.

**Answer: A**

Explanation:

When an administrator schedules the removal of an existing database clone to minimize user impact (e.g., during weekend hours), the "Update Removal Schedule" feature in NDB allows for planning the operation. Among the options, the "Delete supporting snapshot from NDB" is pre-selected as a non-optional action. This ensures that the snapshot data associated with the clone is removed along with the clone itself, maintaining storage efficiency and consistency in the Time Machine framework. Other options may be selectable but are not mandatory by default.

### NEW QUESTION # 25

An administrator needs to create a custom PostgreSQL HA software profile. Which software component manages the state of the cluster and handles failover?

- A. HAProxy
- B. etcd
- **C. Patroni**
- D. keepalived

**Answer: C**

Explanation:

NDB supports PostgreSQL HA software profiles for provisioning PostgreSQL databases with high availability. PostgreSQL HA software profiles consist of three components: etcd, HAProxy, and Patroni.

etcd is a distributed key-value store that provides a reliable way to store configuration data across a cluster of machines. etcd is used by Patroni to store and synchronize the cluster state and configuration.

HAProxy is a load balancer that distributes incoming requests to the PostgreSQL nodes.

HAProxy is used to expose a single endpoint for database connections even as the roles of the individual nodes change.

Patroni is a template for PostgreSQL high availability. Patroni is responsible for managing the state of the cluster and handling failover. Patroni uses etcd as the distributed configuration store and relies on HAProxy for load balancing.

Therefore, the software component that manages the state of the cluster and handles failover is Patroni.

### NEW QUESTION # 26

An administrator has run into an error when provisioning a new Oracle database VM. What is the best action that the administrator should perform in the NDB GUI to provide the most complete picture to send to Nutanix support on that specific operation?

- A. In the operations menu, select the job the failed and choose Generate Bundle from the lower right.
- B. Take a screen shot of the error in the Operations menu.
- C. Copy the error message from the Operations menu.
- D. From the Administration section of NDB, go to the Diagnostics section and chose Generate Bundle.

**Answer: A**

Explanation:

When an administrator encounters an error provisioning a new Oracle database VM in NDB, the best action to provide Nutanix support with the most complete picture is to select the failed job in the Operations menu and choose Generate Bundle from the lower right. The "Generate Bundle" option creates a comprehensive diagnostic package, including logs, configuration details, and error traces specific to the failed operation. This bundle is ideal for troubleshooting and can be uploaded to Nutanix Support for analysis.

### NEW QUESTION # 27

.....

We have free demos of our NCP-DB-6.10 learning braindumps for your reference, as in the following, you can download which NCP-DB-6.10 exam materials demo you like and make a choice. Therefore, if you really have some interests in our NCP-DB-6.10 Study Guide, then trust our professionalism, we will give you the most professional suggestions on the details of the NCP-DB-6.10 practice quiz, no matter you buy it or not, just feel free to contact us!
