

# New Guidewire InsuranceSuite-Analyst Dumps - Get Ready With InsuranceSuite-Analyst Exam Questions

---

## **Guidewire practice test questions fully solved & updated 2025**

**Subrogation Referral - answer is triggered automatically through built in business rules when a third party is at fault or partially at fault**

**Benefits of leveraging the base configuration - answer - Leverage project resources and tools more effectively**

- Decrease development time**
- Decrease testing**
- Decreases maintenance cost**
- Decrease future upgrade efforts**
- Lower their cost of ownership**

**Only customize when**

- Increase overall efficiency**
- Establish a competitive advantage**

The aim of ITPassLeader is help every candidates getting Guidewire certification easily and quickly. Comparing to attending expensive training institution, InsuranceSuite-Analyst dumps pdf is more suitable for people who are eager to passing actual test but no time and energy. If you decide to join us, you will receive valid InsuranceSuite-Analyst learning study materials with real questions and detailed explanations.

You must improve your skills and knowledge to stay current and competitive. You merely need to obtain the InsuranceSuite-Analyst certification exam badge in order to achieve this. You must pass the InsuranceSuite-Analyst Exam to accomplish this, which can only be done with thorough exam preparation. Download the InsuranceSuite-Analyst exam questions right away for immediate and thorough exam preparation.

## **Exam InsuranceSuite-Analyst Guide Materials - Valid InsuranceSuite-Analyst Test Book**

Getting more certifications are surely good things for every ambitious young man. It not only improves the possibility of your life but also keep you constant learning. Test ability is important for personal. But if you are blocked by this exam, our Guidewire InsuranceSuite-Analyst Valid Exam Practice questions may help you. If you have only one exam unqualified so that you can't get the

certification. Our InsuranceSuite-Analyst valid exam practice questions will help you out. We guarantee you 100% pass in a short time.

## Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q48-Q53):

### NEW QUESTION # 48

Preparation best practices to complete prior to the elaboration workshop include:

- A. Identify customer's key business requirements
- B. Write acceptance criteria for each story card used in the session
- C. Create demonstration data necessary to demo functionality
- D. Review deployment notes to ensure alignment

**Answer: A,C**

Explanation:

Elaboration workshops are a critical activity in Guidewire projects, particularly during early phases such as Inception. Proper preparation ensures that these workshops are productive, focused, and aligned with business objectives. Two key preparation best practices are identifying the customer's key business requirements and creating demonstration data.

Identifying the customer's key business requirements (Option B) is essential so the elaboration session focuses on the most important business scenarios. Analysts must understand priority workflows, regulatory constraints, and business goals before the session begins. This allows demonstrations to be relevant and helps stakeholders validate whether Guidewire out-of-the-box functionality meets their needs.

Creating demonstration data (Option C) is equally important. Elaboration workshops rely heavily on showing the system in action. Preconfigured demo data—such as sample policies, accounts, or claims—ensures that workflows can be demonstrated smoothly without delays or distractions. Well-prepared data allows participants to focus on functionality rather than setup issues.

Reviewing deployment notes (Option A) is not relevant prior to elaboration workshops, as deployment concerns occur much later in the project lifecycle. Writing detailed acceptance criteria for each story card (Option D) is typically done after elaboration, once stories are refined and prioritized for development.

By focusing on requirements clarity and effective demonstrations, analysts help ensure that elaboration workshops validate scope, uncover gaps early, and contribute meaningful updates to the project backlog.

### NEW QUESTION # 49

According to the training, as a non-developer, what are the common activities you may be involved in related to integrations?

- A. Defining data mapping requirements between systems
- B. Defining UI screen requirements to support new data or processes
- C. Defining data architecture requirements (ETL)
- D. Defining batch process sequencing and error handling
- E. Defining performance testing approaches for the integration

**Answer: A,B**

Explanation:

Comprehensive and Detailed Explanation:

In the context of Guidewire InsuranceSuite, while non-developers (such as Business Analysts) do not write the integration code or configure the technical message transport details, they play a critical role in defining the business requirements that drive the integration.

The two primary activities for a non-developer in this area are:

\* Defining Data Mapping (A): Integrations exist to exchange data. The Analyst must precisely define what data is being exchanged.

This involves creating a "Source-to-Target" mapping document that specifies which Guidewire field maps to which field in the external system (and vice versa). This requires a deep understanding of the Data Model to identify the correct entities and typelists.

\* Defining UI Screen Requirements (B): Integrations often impact the user interface. For example, if an integration retrieves a credit score, the Analyst must define where on the screen that score should be displayed. Conversely, if an integration requires user input to trigger (e.g., ordering a motor vehicle report), the Analyst must define the necessary input fields and validation rules on the UI to support that process.

Why the other options are incorrect:

\* C, D, E: These are technical responsibilities. Defining ETL architecture, batch process sequencing, and performance testing approaches requires knowledge of system architecture, database design, and server load balancing, which falls under the domain

of Developers or System Architects, not the Business Analyst.

#### NEW QUESTION # 50

According to the training, what are the common activities of a Business Analyst? (Choose two)

- A. Always focused on demonstrating value for end users
- **B. Defines functional requirements and workflows**
- C. Develops test scenarios for each happy path
- **D. Represents the voice of the customer**
- E. Responsible for signing off on user stories and defects

**Answer: B,D**

Explanation:

In Guidewire InsuranceSuite projects, the Business Analyst (BA) plays a central role in ensuring that the solution delivers business value while remaining aligned with Guidewire best practices. The two most common and core activities of a Business Analyst are representing the voice of the customer and defining functional requirements and workflows, making Options D and E correct. The Business Analyst represents the voice of the customer (Option D) by understanding business goals, operational needs, regulatory constraints, and user expectations. The BA ensures these perspectives are accurately reflected in user stories, acceptance criteria, and process designs. This role is critical in bridging the gap between business stakeholders and technical teams. Business Analysts also define functional requirements and workflows (Option E). This includes documenting future-state business processes, identifying system behaviors, defining business rules, and clarifying how Guidewire InsuranceSuite should support end-to-end scenarios. These requirements guide developers and testers without prescribing technical implementation details. The remaining options are not primary BA responsibilities. Signing off on stories and defects (Option A) is typically the responsibility of the Product Owner or business sponsor. Developing detailed test scenarios (Option C) is primarily a Quality Analyst activity. While demonstrating value is important, Option B is too broad and aspirational to define a concrete BA activity. Understanding these responsibilities helps ensure effective collaboration and successful delivery in Guidewire projects.

#### NEW QUESTION # 51

An example of a tool built by Guidewire Professional Services to support implementation projects is:

- A. Requirement
- B. Guiding principle
- C. Business objective
- **D. User story card**

**Answer: D**

Explanation:

The User Story Card is a key tool developed and standardized by Guidewire Professional Services to support InsuranceSuite implementation projects, making Option A the correct answer.

User story cards provide a structured, consistent way to capture requirements using an Agile approach aligned with SurePath methodology. They define business intent, acceptance criteria, and scope boundaries in a format that supports elaboration, estimation, development, and testing.

The remaining options are not tools. Requirements (Option B), business objectives (Option C), and guiding principles (Option D) are types of content, not standardized delivery tools.

User story cards enable consistent communication across analysts, developers, and testers and are central to successful Guidewire implementations.

#### NEW QUESTION # 52

The goal of an elaboration workshop is to identify value-driven changes to the OOTB User Story that supports business processes. Who are the key stakeholders in this process?

- A. Development resources
- **B. Subject Matter Expert**
- **C. Business Analyst**
- D. Scrum Master

**Answer: B,C**

Explanation:

Comprehensive and Detailed Explanation:

Elaboration Workshops (typically occurring during the Inception phase) are the primary venue for defining and refining requirements. The goal is to take the "Out-of-the-Box" (OOTB) user stories and determine if they meet business needs or if changes are required to deliver specific business value.

The Key Stakeholders required to drive this specific process are:

\* Subject Matter Experts (SMEs) (D): They are the "Voice of the Customer." They possess the deep business knowledge required to explain the current and desired processes. They are the ones who determine if a feature has value and define the acceptance criteria. Without them, the "value-driven" aspect of the workshop cannot be achieved.

\* Business Analysts (BAs) (A): They facilitate the workshop. Their role is to elicit the information from the SMEs, challenge assumptions to ensure simplicity (sticking to OOTB where possible), and document the requirements into clear User Stories. They act as the bridge between the business need and the technical solution.

Why the others are not "Key Stakeholders" for identifying value:

\* Development resources (C): While developers (or Architects) often attend these workshops (part of the "Three Amigos" concept) to provide technical feasibility assessments and cost estimates, they do not define the business value. They define the solution.

\* Scrum Master (B): The Scrum Master ensures the Agile process is followed and removes impediments but does not contribute to the content of the requirements or the definition of business value.

## NEW QUESTION # 53

.....

If you want to know more about our test preparations materials, you should explore the related InsuranceSuite-Analyst exam Page. You may go over our InsuranceSuite-Analyst brain dumps product formats and choose the one that suits you best. You can also avail of the free demo so that you will have an idea how convenient and effective our InsuranceSuite-Analyst exam dumps are for InsuranceSuite-Analyst certification. With ITPassLeader, you will not only get a single set of PDF dumps for InsuranceSuite-Analyst Exams but also a simulate software for real exams. Rather we offer a wide selection of brain dumps for all other exams under the InsuranceSuite-Analyst certification. This ensures that you will cover more topics thus increasing your chances of success. With the multiple learning modes in InsuranceSuite-Analyst practice exam software, you will surely find your pace and find your way to success.
