In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our 312-50v13 question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our 312-50v13 Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment you can free download the demo of our 312-50v13 guide torrents, and I can make a bet that you will be fond of our 312-50v13 exam questions if you understand it.

While Certified Ethical Hacker Exam (CEHv13) (312-50v13) exam preparing for the Certified Ethical Hacker Exam (CEHv13) (312-50v13) exam, candidates have to pay extra money when ECCouncil introduces new changes. With Prep4sures you can save

money in this scenario as up to 365 days of free updates are available. You can also download a free demo to understand everything about Prep4sures 312-50v13 Exam Material before buying. While there are many 312-50v13 exam question preparation guides available online, it's crucial to be vigilant while making purchases due to the prevalence of online scams. Prep4sures offers ECCouncil 312-50v13 exam questions for the best exam preparation experience.

Pass-Sure Valid Test 312-50v13 Tutorial, 312-50v13 Paper

The best news is that during the whole year after purchasing, you will get the latest version of our 312-50v13 exam prep study materials for free, since as soon as we have compiled a new version of the study materials, our company will send the latest one of our study materials to your email immediately. The experts in our company are always keeping a close eye on even the slightest change in the field. Therefore, we can assure that you will miss nothing needed for the 312-50v13 Exam. What's more, the latest version of our study materials will be a good way for you to broaden your horizons as well as improve your skills.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q791-Q796):

NEW QUESTION # 791

Fingerprinting an Operating System helps a cracker because:

- A. It doesn't depend on the patches that have been applied to fix existing security holes
- **B. It informs the cracker of which vulnerabilities he may be able to exploit on your system**
- C. It opens a security-delayed window based on the port being scanned
- D. It defines exactly what software you have installed

Answer: B

NEW QUESTION # 792

If a token and 4-digit personal identification number (PIN) are used to access a computer system and the token performs off-line checking for the correct PIN, what type of attack is possible?

- A. Man-in-the-middle
- B. Birthday
- **C. Brute force**
- D. Smurf

Answer: C

Explanation:

If the token itself (e.g., hardware key or smartcard) performs offline verification of the PIN, it can be physically attacked. An attacker can:

- * Steal the token
- * Try all possible PIN combinations (0000-9999)
- * Bypass limits if no lockout mechanisms exist

This is a brute-force attack - the attacker tries every combination until the correct one is found.

From CEH v13 Courseware:

- * Module 6: Malware and Authentication
- * Module 20: Identity and Access Management

Incorrect Options:

- * A: Birthday attacks are related to hash collisions.
- * C: MITM involves intercepting communication, not offline brute-force.
- * D: Smurf is a DoS attack, not related to token/PIN systems.

NEW QUESTION # 793

What tool can crack Windows SMB passwords simply by listening to network traffic?

- A. NTFSDOS
- **B. L0phtcrack**
- C. Netbus
- D. This is not possible

Answer: B

Explanation:

L0phtCrack is a password auditing and recovery tool. It can:

- * Capture password hashes over the network (e.g., via SMB).
- * Crack password hashes using dictionary, brute-force, or hybrid attacks.

It's particularly effective when used on SMB-based challenge-response authentication (NTLM/LM) captured via packet sniffing.

From CEH v13 Courseware:

- * Module 4: Enumeration
- * Module 6: Malware Threats

CEH v13 Study Guide states:

"L0phtCrack can sniff SMB authentication exchanges from network traffic and extract NTLM password hashes to crack them offline." Incorrect Options:

- * A: This is possible (hence A is wrong).
- * B: Netbus is a backdoor/trojan tool.
- * C: NTFSDOS is used to read NTFS partitions under DOS, not for password cracking.

NEW QUESTION # 794

Clark, a professional hacker, attempted to perform a Btlejacking attack using an automated tool, Btlejack, and hardware tool, micro:bit. This attack allowed Clark to hijack, read, and export sensitive information shared between connected devices. To perform this attack, Clark executed various btlejack commands. Which of the following commands was used by Clark to hijack the connections?

- A. btlejack -d /dev/ttyACM0 -d /dev/ttyACM2 -s
- B. btlejack-f0x129f3244-j
- **C. btlejack -f0x9c68fd30 -t -m 0x1 ffffffff**
- D. btlejack -c any

Answer: C

NEW QUESTION # 795

You are the chief cybersecurity officer at CloudSecure Inc., and your team is responsible for securing a cloudbased application that handles sensitive customer data. To ensure that the data is protected from breaches, you have decided to implement encryption for both data-at-rest and data-in-transit. The development team suggests using SSL/TLS for securing data in transit. However, you want to also implement a mechanism to detect if the data was tampered with during transmission. Which of the following should you propose?

- A. Qswitch to using SSH for data transmission.
- B. Encrypt data using the AES algorithm before transmission.
- C. Use the cloud service provider's built-in encryption services.
- **D. Implement IPsec in addition to SSL/TLS.**

Answer: D

Explanation:

SSL/TLS is a protocol that provides encryption and authentication for data in transit between a client and a server. However, SSL/TLS does not provide any protection against data tampering, which is the alteration, deletion, or insertion of data without authorization or proper validation. Data tampering can compromise the integrity and accuracy of the data, and potentially lead to breaches or fraud. To detect and prevent data tampering, you should implement IPsec in addition to SSL/TLS. IPsec is a protocol that provides encryption, authentication, and integrity for data in transit at the network layer. IPsec uses cryptographic mechanisms, such as digital signatures and hash-based message authentication codes (HMACs), to verify the identity of the sender and the receiver, and to ensure that the data has not been modified during transmission. IPsec can also provide replay protection, which prevents an attacker from retransmitting old or duplicate packets. By combining SSL/TLS and IPsec, you can achieve a higher level
