12. Frage

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the business catalogs listed below to the business role and save:

HCM - Employee Self-Service (SAP_HCM_BC_EMP_PC)

Concur - Employee Self-Service (SAP_CON_BC_CTE_ESS_PC)

Antwort:

Begründung:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the required business catalogs to the custom all-employee business role created in the previous task. These catalogs provide the applications that will later be shown in the launchpad space and page for all employees.

The catalogs that must be assigned are:

HCM - Employee Self-Service

SAP_HCM_BC_EMP_PC

Concur - Employee Self-Service

SAP_CON_BC_CTE_ESS_PC

Business Scenario Explanation

In the previous task, you created a new custom all-employee business role, for example:

Z_EMPLOYEES_ALL_#####

That role exists, but on its own it does not yet provide app access.

In SAP S/4HANA Cloud, app access is granted through business catalogs.

This means the role must now be connected to the catalogs that contain the apps employees need.

Later, these catalogs will feed the launchpad page content so end users can easily find the relevant applications.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact catalog names and IDs.

Assign both required catalogs.

Save the role after assignment.

Do not assign the wrong catalog variant.

Required Catalogs

Assign exactly these two business catalogs:

Business Catalog

Business Catalog ID

HCM - Employee Self-Service

SAP_HCM_BC_EMP_PC

Concur - Employee Self-Service

SAP_CON_BC_CTE_ESS_PC

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to maintain business roles, assign catalogs, assign launchpad spaces, and maintain restrictions.

Step 2: Search for your custom all-employee business role

Inside Maintain Business Roles:

Search for your business role ID:

Z_EMPLOYEES_ALL_#####

Example

If your suffix is 000013, search for:

Z_EMPLOYEES_ALL_000013

Open the role.

Explanation:

You must open the custom all-employee role created in the previous task, not a template role and not a standard SAP role.

Step 3: Verify the correct role is open

Confirm that the role details show:

Business Role ID = Z_EMPLOYEES_ALL_#####

Business Role Description = All Employee Role #####

Explanation:

This ensures you are assigning catalogs to the correct business role.

Step 4: Go to the "Business Catalogs" tab

Inside the role:

Click the tab:

Business Catalogs

Explanation:

This tab is used to assign the business catalogs that define which apps and app authorizations the role provides.

Step 5: Click Add

In the Assigned Business Catalogs section:

Click Add

This opens the dialog:

Add Business Catalogs

Explanation:

The Add popup is used to search for and assign SAP-delivered business catalogs to the custom role.

Step 6: Search for the first catalog

In the Add Business Catalogs popup:

Search for:

SAP_HCM_BC_EMP_PC

or

HCM - Employee Self Service

Select:

HCM - Employee Self Service

Business Catalog ID: SAP_HCM_BC_EMP_PC

Explanation:

This catalog provides employee self-service apps and is required by the task.

Step 7: Search for the second catalog

Still in the Add Business Catalogs popup:

Search for:

SAP_CON_BC_CTE_ESS_PC

or

Concur - Employee Self-Service

Select:

Concur - Employee Self-Service

Business Catalog ID: SAP_CON_BC_CTE_ESS_PC

Explanation:

This catalog provides the Concur employee self-service content and is also explicitly required by the task.

Step 8: Add the selected catalogs

After selecting both catalogs:

Click OK or Apply

Explanation:

This adds the selected catalogs to the custom role in draft mode.

Step 9: Verify both catalogs are listed

Back in the Business Role screen, verify that both assigned catalogs are visible:

SAP_HCM_BC_EMP_PC

SAP_CON_BC_CTE_ESS_PC

Explanation:

This confirms that the required app authorizations have now been attached to the role.

Step 10: Save the role

Click:

Save

Explanation:

This finalizes the catalog assignment.

Without saving, the catalogs remain only in draft and the role will not provide the required app content.

Step 11: Verify the result after save

After saving, check again that the role still shows both business catalogs in the assigned list.

Explanation:

This confirms the task was completed successfully and the role is ready for the next step, which is launchpad space/page content.

Expected Result

After this task is completed successfully:

the custom all-employee role has both required business catalogs assigned, the role is saved successfully, the role now provides the app authorizations required for employee self-service content, the launchpad page can later use these catalogs to add the required tiles.

13. Frage

SIMULATION

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Restrict the fields listed below for the US / 1710. All other fields should be marked as Not Maintained. Save the role when finished.

Restriction Name	Restriction Type	Restriction Value
Bank Country/Region Key	Read, Value Help	US
Bank Country/Region Key	Value Help	US
Company Code	Write, Read, Value Help	1710
Company Code	Read, Value Help	1710
Purchasing Organization	Write, Read, Value Help	1710
Purchasing Organization	Read, Value Help	1710
Purchasing Organization	Value Help	1710
Valuation Area	Read, Value Help	1710
Valuation Area	Value Help	1710

Antwort:

Begründung:

See Explanation below for all solution

Explanation:

Task 7: Restrict the Custom Business Role for US / 1710 and Mark All Other Fields as Not Maintained Objective The purpose of this task is to maintain the restriction values of the custom business role created in the previous task so that project managers only have the minimum access required for their work in the United States.

This task is performed on the custom business role created from the template:

Template Role: SAP_BR_PROJECT_MANAGER_PROF

Custom Role Example Pattern: BR_PROJECT_MANAGER_PROF_US_#####

The task requires you to:

maintain only the listed restriction fields,
enter the exact required values for US and 1710,
set all other restriction fields to Not Maintained,
and save the role.

Business Scenario Explanation

This restriction setup is what makes the new custom role safe and fit for purpose.

The business requirement says that end users:

are project managers based in the United States,
should only access relevant US project data,
should not be able to staff or work outside the intended scope,
should only see and maintain data for the allowed organizational scope.

This is achieved by limiting the role to:

US for country-related fields

1710 for company / organizational fields

Everything else must be Not Maintained so that unnecessary access is not left open.

Important Notes

Replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Maintain only the fields listed in the table.

Set all other restriction fields to Not Maintained.

Do not leave unrelated fields blank while still restricted.

Restricted + blank is usually wrong.

Not Maintained is the correct setting for all unrelated fields.

Required Restriction Values

Use the following values exactly as shown in your task screenshot.

Restriction Name	Restriction Type	Restriction Value
Bank Country/Region Key	Read, Value Help	US
Bank Country/Region Key	Value Help	US
Company Code	Write, Read, Value Help	1710
Company Code	Read, Value Help	1710
Purchasing Organization	Write, Read, Value Help	1710
Purchasing Organization	Read, Value Help	1710
Purchasing Organization	Value Help	1710
Valuation Area	Read, Value Help	1710
Valuation Area	Value Help	1710

That means:

Country restriction = US

Org/company restrictions = 1710

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to the system

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is where the custom role was created in the previous task and where its restrictions are maintained.

Step 2: Open your custom Project Manager US role

In Maintain Business Roles:

Search for your custom role.

Open the role with ID pattern:

BR_PROJECT_MANAGER_PROF_US_#####

Example

If the suffix is 000457, then the role is:

BR_PROJECT_MANAGER_PROF_US_000457

Explanation:

You must open the custom role, not the standard SAP template role.

The restrictions belong to the derived custom role only.

Step 3: Confirm the correct custom role is open

Check the role details and confirm:

the business role ID matches your custom role,

the description matches the US-specific project manager role,

the role is based on template SAP_BR_PROJECT_MANAGER_PROF.

Explanation:

This avoids accidentally changing the wrong role.

Step 4: Click "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This opens the detailed restriction maintenance area where access categories and field-level values are controlled.

Step 5: Set the access categories for restriction maintenance

On the restriction page, ensure the access categories are maintained as required for the role.
During your run, these categories were maintained as restricted so values could be entered for the listed fields.

Explanation:

Restriction values can only be maintained correctly when the role is in the right restriction mode.

This step prepares the role so the listed fields can be populated with US / 1710 values.

Step 6: Understand the rule before entering values

This task uses a strict rule:

Keep maintained

Only the fields explicitly listed in the table should be maintained with values.

Set to Not Maintained

Every other restriction field not listed in the table must be marked:

Not Maintained

Explanation:

This is the most important logic in the whole task.

If a field is unrelated and still left as restricted or blank, it can cause validation problems or give more access than intended.

Part A: Maintain the required restriction fields

Step 7: Maintain Bank Country/Region Key

Search for:

Bank Country/Region Key

Then maintain:

Read, Value Help = US

Value Help = US

Explanation:

This ensures the user can only read and search bank-related values for the United States.

The screenshot shows the SAP 'General' configuration page for a restriction. The 'Bank Country/Region Key' search term is entered in the search bar. The table below shows two rows of restriction types: 'Read, Value Help' and 'Value Help'. Both rows have 'Leading Restriction' checked. A large 'SAP' watermark is overlaid on the table.

Restrictions and Values	Bank Country/Region Key	Leading Restriction
<input type="checkbox"/>	Read, Value Help	<input checked="" type="checkbox"/>
<input type="checkbox"/>	Value Help	<input checked="" type="checkbox"/>

Step 8: Maintain Company Code

Search for:

Company Code

Then maintain:

Write, Read, Value Help = 1710

Read, Value Help = 1710

Do not maintain an extra standalone Value Help entry for Company Code unless the task explicitly requires it.

Explanation:

The task table does not include a standalone Company Code Value Help line.

So only the listed two Company Code restriction types should contain 1710.

□

Step 9: Maintain Purchasing Organization

Search for:

Purchasing Organization

Then maintain:

Write, Read, Value Help = 1710

Read, Value Help = 1710

Value Help = 1710

Explanation:

This ensures all purchasing-organization-related access for the role is limited to organizational value 1710.

Step 10: Maintain Valuation Area

Search for:

Valuation Area

Then maintain:

Read, Value Help = 1710

Value Help = 1710

Explanation:

This limits valuation-related access to the intended organizational scope.

Part B: Set all other fields to Not Maintained

Step 11: Search through the other restriction fields

After entering the required fields, review the remaining restriction objects.

Examples from your run included fields such as:

Accounting Principle

Authorization Group for Business Partners

Billing Type

and many other unrelated restriction fields

Explanation:

These fields were not listed in the task table, so they must not stay restricted.

Step 12: Mark unrelated fields as Not Maintained

For each field not listed in the required table:

Open the field setting / restriction dialog.

Choose:

Not Maintained

Important examples

From your run:

Accounting Principle → Not Maintained

Authorization Group for Business Partners → Not Maintained

Billing Type → Not Maintained

Explanation:

These fields are outside the required US / 1710 restriction list.

If you leave them restricted without a required value, the setup is incorrect.

Step 13: Do not mark the listed fields as Not Maintained

The following must stay maintained with values because they are in the required table:

Bank Country/Region Key

Company Code

Purchasing Organization

Valuation Area

Explanation:

Only the unrelated fields become Not Maintained.

The listed fields must remain restricted with the required values.

Step 14: Save the role

After all required fields are maintained and all other fields are marked Not Maintained:

Click Save

Explanation:

This finalizes the role restrictions.

Without saving, the restriction changes remain incomplete.

Step 15: Verify the restriction result

After saving, verify that:

required fields contain US and 1710 exactly as defined,

unrelated fields are no longer restricted,

the role saves without error.

Explanation:

This is your final proof that the restricted custom role has been completed correctly.

Expected Result

After the task is completed successfully:

the custom role remains based on SAP_BR_PROJECT_MANAGER_PROF,

required US / 1710 restriction fields are maintained,

all unrelated restriction fields are marked Not Maintained,

the role is saved successfully,

the role now reflects minimum necessary access for US-based project managers.

14. Frage

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a Launchpad Space and Page with the information below.

Antwort:

Begründung:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

□

15. Frage

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a new migration project with the information listed below.

□

Antwort:

Begründung:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new migration project for the bank data migration scenario in SAP S/4HANA Cloud Public Edition.

The migration method for this scenario is:

Migrate Data Using Staging Tables

The migration project must be created with the exact values provided in the task.

Business Scenario Explanation

In this scenario, you are responsible for migrating bank master data into SAP S/4HANA Cloud Public Edition.

Because only a few banks need to be loaded, the selected migration approach is:

Migrate Data Using Staging Tables

Before any files can be uploaded or any bank data can be validated and migrated, a migration project must first be created. This project acts as the main container for:

the migration object,

the staging-table upload,

validation,

mapping,

transfer to staging tables,

and the final migration execution.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

The migration project must be created using:

Migrate Data Using Staging Tables

The migration object must be:

Bank

Save or create the project only after confirming the values are correct.

Required Values

Use the following values exactly as shown in the task image.

Parameter

Data

Name

Bank Data #####

Migration object

Bank

Example

If your suffix is 000013, then the values become:

Name = Bank Data 000013

Migration object = Bank

Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit used to create migration projects and load master data and transactional data into the system.

Because the task asks you to create a new migration project, this is the correct starting point.

Step 2: Start creating a new migration project

Inside the migration app:

Click:

Create

When the dropdown appears, select:

Migrate Data Using Staging Tables

Explanation:

This is very important because the business scenario explicitly says that the chosen migration method is Migrate Data Using Staging Tables.

Do not choose:

Migrate Data Directly from SAP System

That would be the wrong migration approach for this task.

Step 3: Enter the migration project name

In the project creation screen, enter:

Name = Bank Data #####

Example

If your suffix is 000013, enter:

Bank Data 000013

Explanation:

This is the name of the migration project and must exactly match the task requirement.

Step 4: Keep the staging-table migration approach

On the project creation screen, confirm the migration approach is:

Migrate Data Using Staging Tables

Explanation:

This ensures the migration project is created with the correct loading approach for later CSV/staging-table processing.

Step 5: Keep the local database connection

When the system asks for database connection, leave the default:

Local SAP S/4HANA Database Schema

Explanation:

In your execution, the local schema was used for the migration project.

This is the expected option for the training scenario.

Step 6: Continue to Migration Objects

Click:

Step 2

or continue to the second step of project creation.

Explanation:

This moves from the general project header information to the migration object selection.

Step 7: Search for the migration object

In the Migration Objects section:

Search for:

Bank

Explanation:

The task explicitly requires the migration object:

Bank

So only that object should be selected.

Step 8: Select the migration object "Bank"

When the object appears:

Select:

Bank

Make sure it appears in the Selected Migration Objects area.

Explanation:

This step links the project specifically to the Bank migration object.

Without selecting the migration object, the migration project would be incomplete.

Step 9: Create the migration project

After confirming:

project name,

migration approach,

database connection,

migration object = Bank,

click:

Create

or the final confirmation button provided by the system

Explanation:

This finalizes the creation of the migration project.

Step 10: Verify the created migration project

After creation, verify that the new project shows:

Project Name = Bank Data #####

Migration Object = Bank

Explanation:

This confirms that the project has been created successfully and is ready for template download, CSV preparation, validation, staging-table transfer, and migration execution.

Expected Result

After this task is completed successfully:

a new migration project exists,

the project name matches the required naming pattern,
the migration approach is staging tables,
the migration object is Bank,
the project is ready for the next migration steps.

16. Frage

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Check the documentation for the Bank migration object and assign the additional business role required to ensure you can migrate bank data into the system.

Antwort:

Begründung:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to check the Bank migration object documentation and assign the additional business role needed so you can successfully migrate bank data into SAP S/4HANA Cloud Public Edition.

The additional business role required is:

Business Role Template: SAP_BR_MD_SPECIALIST_BNK

Business Role Description: Master Data Specialist - Bank Data

SAP documents that the app Manage Banks - Master Data is assigned to the business role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK) in business catalog Bank - Maintenance (SAP_CA_BC_BNK_PC). That is the role needed for bank master data maintenance and is the missing authorization when the migration cockpit can load data but cannot create banks in the target system.

Business Scenario Explanation

In the previous migration steps, you already assigned the role:

Configuration Expert - Data Migration

BR_CONFIG_EXPERT_DATA_MIG

That role gives access to the migration cockpit itself, meaning you can:

create migration projects,

select migration objects,

upload CSV files,

validate data,

transfer data to staging tables,

and execute migration runs.

However, for the Bank migration object, SAP also requires the authorization to create bank master data in the target system. If that authorization is missing, the migration can still reach the execution stage, but then fail with an authorization message such as:

You are not authorized to create bank data for country/region US

That is why the additional role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK) must be assigned.

Important Notes

Always replace ##### with the last 6 digits of your group number in later migration steps.

The role to add here is in addition to the migration cockpit role.

Save the user after assigning the role.

Refresh the session after assignment so the new authorization is loaded.

Required Additional Role

Step 1: Review the migration object documentation

Open the Bank migration object in the migration project and review the documentation or role requirement note.

Explanation:

The task explicitly asks you to check the documentation for the Bank migration object and assign the additional role required for migration. SAP's official documentation for bank maintenance shows that bank master maintenance is tied to the role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK).

Step 2: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to assign business roles to your user.

Step 3: Search for your own user

In Maintain Business Users:

Enter your own user ID in the search field.

Click Go.

Explanation:

You must assign the additional role to your own user because you are the one executing the migration.

Step 4: Open your user record

From the search results:

Click your user entry.

Open the business user detail page.

Explanation:

This opens the maintenance screen where assigned business roles can be changed.

Step 5: Switch to Edit mode

On the user detail page:

Click Edit

Explanation:

Edit mode is required before the assigned business roles list can be updated.

Step 6: Open the "Assigned Business Roles" tab

Inside the business user record:

Click:

Assigned Business Roles

Explanation:

This is where you assign the additional bank master data role.

Step 7: Click Add

In the assigned business roles section:

Click Add

This opens the popup:

Add Business Roles

Explanation:

This popup is used to search for standard SAP business roles.

Step 8: Search for the additional bank role

In the Add Business Roles popup, search for either:

SAP_BR_MD_SPECIALIST_BNK

or

Master Data Specialist - Bank Data

Then select the matching role.

Explanation:

SAP documents that the app Manage Banks - Master Data belongs to the role Master Data Specialist - Bank Data (SAP_BR_MD_SPECIALIST_BNK). That is the role needed for bank creation/maintenance authorization.

Step 9: Add the role

After selecting the role:

Click OK or Apply

Explanation:

This adds the role to your user in draft mode.

Step 10: Save the business user

Back on the business user page:

Click Save

Explanation:

This finalizes the new role assignment.

Step 11: Confirm both migration-related roles are assigned

After saving, verify that your user now has both:

BR_CONFIG_EXPERT_DATA_MIG

SAP_BR_MD_SPECIALIST_BNK

Explanation:

These two roles cover different parts of the scenario:

BR_CONFIG_EXPERT_DATA_MIG → migration cockpit access

SAP_BR_MD_SPECIALIST_BNK → bank master data creation/maintenance authorization

Step 12: Refresh your session After saving:

Refresh the browser completely, or

Sign out and sign in again

Explanation:

SAP role assignments may not become active in the current session immediately. A refresh or new login ensures the authorization is reloaded.

Step 13: Return to the migration project

Go back to:

Migrate Your Data

open your project:

Bank Data #####

open migration object:

Bank

Explanation:

Now that the additional bank role is assigned, the system should allow you to migrate bank master data successfully.

Expected Result

After this task is completed successfully:

your user still has the migration role BR_CONFIG_EXPERT_DATA_MIG,

your user also has the additional bank role SAP_BR_MD_SPECIALIST_BNK,

the authorization error for creating bank data should no longer occur,

the Bank migration can proceed successfully.

Screenshots for This Task

Screenshot 1: Assigned Business Roles list including the migration role Use the screenshot from your run where the business user already shows:

Configuration Expert - Data Migration

This screenshot can be used to explain the starting point before the additional role is assigned.

What this screenshot proves

It shows that the migration role alone was not enough for the bank creation authorization.

Screenshot 2: Migration error message

Use the screenshot from your run that shows the message:

You are not authorized to create bank data for country/region US

This is the key evidence that an additional bank master data role was required.

What this screenshot proves

It proves the migration cockpit role was present, but bank maintenance authorization was still missing.

Official SAP Documentation Basis

SAP's official documentation states that the Manage Banks - Master Data app is assigned to:

Master Data Specialist - Bank Data

SAP_BR_MD_SPECIALIST_BNK

within catalog:

Bank - Maintenance

SAP_CA_BC_BNK_PC

This is the basis for the additional role assignment required in this task.

17. Frage

.....

Wir hoffen, dass sich alle Ihrer in der SAP C-S4CPB-2602 Prüfungssoftware gesetzten Erwartungen erfüllen können. Die Vollständigkeit und Autorität der Test-Bank, Vielfältigkeit der Versionen von Unterlagen--- Es gibt 3 Versionen, nämlich PDF, Online Test Engine und Practice Testing Engine, und auch die kostenlose Demo und einjährige Aktualisierung der SAP C-S4CPB-2602 Software, alles enthält unsere herzlichste Anstrengungen!
