Latest Professional-Cloud-Architect Questions | Test Professional-Cloud-Architect Pdf

It is known to us that our Professional-Cloud-Architect learning materials have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the Professional-Cloud-Architect training files. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their Professional-Cloud-Architect Exam and get the related certification. So if you buy the Professional-Cloud-Architect study questions from our company, you will get the certification in a shorter time.

Google Professional-Cloud-Architect Certification is recognized globally and is highly valued by organizations that want to build and implement cloud solutions using Google Cloud Platform. It is an excellent way for professionals to showcase their expertise in cloud architecture and design and demonstrate their commitment to continuous learning and professional development.

Google Certified Professional - Cloud Architect (GCP) Sample Questions

(Q318-Q323):

NEW QUESTION # 318

A news feed web service has the following code running on Google App Engine. During peak load, users report that they can see news articles they already viewed. What is the most likely cause of this problem?

```
import news
from flask import Flask, redirect, request
from flask.ext.api import status
from google.appengine.api import users

app = Flask(__name__)
sessions = {}

@app.route("/")
def homepage():
    user = users.get_current_user()
    if not user:
        return "Invalid login",
        status.HTTP_401_UNAUTHORIZED

    if user not in sessions:
        sessions[user] = { "viewed": [] }

    news_articles = news.get_new_news(user,
        sessions[user]["viewed"])
    sessions[user]["viewed"] += [n["id"] for n
        in news_articles]

    return news.render(news_articles)

if __name__ == "__main__":
    app.run()
```

- A. The URL of the API needs to be modified to prevent caching.
- B. The session variable is local to just a single instance.
- C. The HTTP Expires header needs to be set to -1 to stop caching.
- D. The session variable is being overwritten in Cloud Datastore.

Answer: D

Explanation:

Explanation: <https://stackoverflow.com/questions/3164280/google-app-engine-cache-list-in-session-variable?rq=1>

NEW QUESTION # 319

Your company has an application running on Google Cloud that is collecting data from thousands of physical devices that are globally distributed. Data is published to Pub/Sub and streamed in real time into an SSO Cloud Bigtable cluster via a Dataflow pipeline. The operations team informs you that your Cloud Bigtable cluster has a hot-spot and queries are taking longer than expected. You need to resolve the problem and prevent it from happening in the future. What should you do?

- A. Review your RowKey strategy and ensure that keys are evenly spread across the alphabet.
- B. Delete records older than 30 days.
- C. Advise your clients to use HBase APIs instead of NodeJS APIs.
- D. Double the number of nodes you currently have.

Answer: A

NEW QUESTION # 320

Your company is planning to upload several important files to Cloud Storage. After the upload is completed, they want to verify that the upload content is identical to what they have on-premises. You want to minimize the cost and effort of performing this check. What should you do?

- A. 1) Use `gsutil -m` to upload all the files to Cloud Storage.
2) Develop a custom Java application that computes CRC32C hashes
3) Use `gsutil ls -L gs://[YOUR_BUCKET_NAME]` to collect CRC32C hashes of the uploaded files
4) Compare the hashes
- B. 1) Use `gsutil -m` to upload all the files to Cloud Storage.
2) Use `gsutil hash -c FILE_NAME` to generate CRC32C hashes of all on-premises files
3) Use `gsutil ls -L gs://[YOUR_BUCKET_NAME]` to collect CRC32C hashes of the uploaded files
4) Compare the hashes
- C. 1) Use Linux `shasum` to compute a digest of files you want to upload

- 2) Use gsutil -m to upload all the files to the Cloud Storage
- 3) Use gsutil cp to download the uploaded files
- 4) Use Linux shasum to compute a digest of the downloaded files 5. Compare the hashes
- D. 1) Use gsutil -m to upload all the files to Cloud Storage.
- 2) Use gsutil cp to download the uploaded files
- 3) Use Linux diff to compare the content of the files

Answer: B

NEW QUESTION # 321

You deploy your custom Java application to Google App Engine. It fails to deploy and gives you the following stack trace. What should you do?

```
java.lang.SecurityException: SHA1 digest error for
com/Altostrat/CloakedServlet.class
    at com.google.appengine.runtime.Request.process
-d36f818a24b8cf1d (Request.java)
    at
sun.security.util.ManifestEntryVerifier.verify
(ManifestEntryVerifier.java:210)
    at java.util.jar.JarVerifier.processEntry
(JarVerifier.java:218)
    at java.util.jar.JarVerifier.update
(JarVerifier.java:205)
    at
java.util.jar.JarVerifiersVerifierStream.read
(JarVerifier.java:428)
    at sun.misc.Resource.getBytes
(Resource.java:124)
    at java.net.URLClassLoader.defineClass
(URLClassLoader.java:273)
    at sun.reflect.GeneratedMethodAccessor5.invoke
(Unknown Source)
    at
sun.reflect.DelegatingMethodAccessorImpl.invoke
(DelegatingMethodAccessorImpl.java:43)
    at java.lang.reflect.Method.invoke
(Method.java:616)
    at java.lang.ClassLoader.loadClass
(ClassLoader.java:266)
```

- A. Digitally sign all of your JAR files and redeploy your application
- B. Upload missing JAR files and redeploy your application.
- C. Recompile the CloakedServlet class using MD5 hash instead of SHA1

Answer: A

NEW QUESTION # 322

You are designing a Data Warehouse on Google Cloud and want to store sensitive data in BigQuery. Your company requires you to generate encryption keys outside of Google Cloud. You need to implement a solution. What should you do?

- A. Import a key in Cloud KMS. Store all data in Cloud Storage using the customer-managed key option and select the

created key. Set up a Dataflow pipeline to decrypt the data and to store it in a new BigQuery dataset.

- B. Generate a new key in Cloud Key Management Service (Cloud KMS). Create a dataset in BigQuery using the customer-managed key option and select the created key
- C. Generate a new key in Cloud Key Management Service (Cloud KMS). Store all data in Cloud Storage using the customer-managed key option and select the created key. Set up a Dataflow pipeline to decrypt the data and to store it in a BigQuery dataset.
- **D. Import a key in Cloud KMS. Create a dataset in BigQuery using the customer-supplied key option and select the created key.**

Answer: D

Explanation:

Explanation
