Scaled Agile SAFe-RTE Test Certification Cost & SAFe-RTE Pass4sure Pass Guide

We prepare everything you need to prepare, and help you pass the exam easily. The SAFe-RTE exam braindumps of us have the significant information for the exam, if you use it, you will learn the basic knowledge as well as some ways. We offer free update for you, and you will get the latest version timely, and you just need to practice the SAFe-RTE Exam Dumps. We believe that with the joint efforts of both of us, you will gain a satisfactory result.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q53-Q58):

NEW QUESTION # 53

How can a Release Train Engineer support decentralized decision making?

- A. Empower knowledge workers to manage their dependencies with other teams
- B. Evaluate the strategy for the Value Stream
- C. Change the cadence of the Agile Release Train
- D. Update team Program Increment (PI) Objectives when shipping a time critical re-lease

Answer: A

Explanation:

A Release Train Engineer (RTE) can support decentralized decision-making by empowering knowledge workers to manage their dependencies with other teams. This approach aligns with SAFe's Principle #9, which advocates for pushing decision-making authority down to the level of those who have the most context and information about the work being done.

* Empowerment in SAFe: SAFe encourages RTEs to empower teams to make decisions that affect their work directly. This

empowerment is crucial for maintaining a fast and responsive workflow, which is essential in a Lean-Agile environment¹.

* **Decentralized Decision-Making:** Decentralizing decision-making helps to avoid delays caused by having to escalate decisions up the chain of command. It also ensures that decisions are made by those with the most relevant knowledge and context, leading to better outcomes¹.

* **Managing Dependencies:** By enabling knowledge workers to manage their dependencies, RTEs facilitate a smoother flow of value through the Agile Release Train (ART). This helps to address issues more rapidly and with greater accuracy, as the teams involved have the best understanding of the technical and organizational context¹.

* **Role of the RTE:** While the RTE does not make these decisions, they play a critical role in creating an environment where decentralized decision-making can thrive. This includes providing clear boundaries within which teams can operate autonomously and ensuring that teams have the necessary information and tools to manage their dependencies effectively¹.

* **Continuous Improvement:** Empowering teams also contributes to a culture of continuous improvement, as teams are more likely to experiment and innovate when they have the authority to make decisions that impact their work¹.

In summary, by empowering knowledge workers to manage their dependencies with other teams, an RTE supports decentralized decision-making, which is a key element of the SAFe framework for achieving agility and quick response to change.

NEW QUESTION # 54

What is one benefit of an Iteration and PI calendar?

- A. Ability to ensure that key events do not conflict with non-SAFe events
- **B. Ability to visualize the ART cadence and synchronization**
- C. Ability to create a big visible information radiator (BVIR) of the important team and ART milestones
- D. Ability to know the cycle time between important team and ART events

Answer: B

Explanation:

The Iteration and PI (Program Increment) calendar is a tool used within the SAFe (Scaled Agile Framework) to help visualize the timing of the iterations and PIs for an Agile Release Train (ART). This visualization is crucial for several reasons:

1. **Cadence and Synchronization:** The calendar helps all teams involved in the ART to align on a common cadence, which is the rhythm of the iterations and PIs. This alignment ensures that all teams are working in sync, which is essential for the ART to function effectively as a whole¹.
2. **Facilitating PI Planning:** The Iteration and PI calendar is used during PI planning to help teams understand when iterations will begin and end, which aids in the planning of work and the setting of objectives².
3. **Visualizing ART Events:** The calendar provides a visual representation of all the key events in the ART's timeline, including iterations, PIs, and IP iterations (Innovation and Planning iterations), which are essential for continuous learning and improvement³.
4. **Supporting Predictability:** By visualizing the ART's cadence and synchronization, the Iteration and PI calendar supports better predictability in delivery and helps manage stakeholders' expectations¹.
5. **Enabling Relentless Improvement:** The calendar also supports the SAFe principle of relentless improvement by making it clear when the ART will have time to reflect on the past PI and identify areas for improvement³.

NEW QUESTION # 55

When estimating stories, what is the Scrum Master's key responsibility?

- **A. Ensure everyone on the team participates**
- B. Limit discussion to manage timeboxes
- C. Provide information about customer needs
- D. Ensure the team gives accurate estimates

Answer: A

Explanation:

The Scrum Master's key responsibility when estimating stories is to ensure that everyone on the team participates in the process. This is aligned with the Scrum Master's role as a facilitator and servant leader, who must encourage full team engagement to leverage the collective expertise and perspectives of all team members. This helps in creating more accurate and reliable estimates and promotes team ownership of the tasks.

Here's a detailed breakdown of the Scrum Master's role during story estimation:

* **Facilitation:** The Scrum Master facilitates the estimation process, ensuring that it is collaborative and that every team member has the opportunity to contribute¹.

* **Encouraging Participation:** It is crucial that all team members participate in the estimation to provide diverse insights and reach a

consensus on the effort required for each story¹.

* Coaching: The Scrum Master also coaches the team in estimation techniques and helps them understand the value of collective estimation as part of the Agile process².

* Maintaining Agile Principles: They guide the team in adhering to Agile principles during the estimation process, ensuring that the team remains focused on delivering value efficiently².

The other options (A, C, D) are not the primary responsibilities of the Scrum Master during story estimation. While the Scrum Master may support the team in achieving accurate estimates and managing time effectively, their key responsibility is to ensure active participation from all team members, which is fundamental to the Agile methodology and the Scrum framework³.

NEW QUESTION # 56

Which SAFe Core Competency incorporates guidance on coordinating trains and suppliers?

- A. Business Agility
- B. Measure and Grow
- C. Enterprise Solution Delivery
- D. Lean Portfolio Management

Answer: C

NEW QUESTION # 57

Which two actions can be taken immediately during the management review and problem-solving meeting? (Choose two.)

- A. Change the scope
- B. Hire new people
- C. Recognize the team with the highest velocity
- D. Combine teams to increase velocity
- E. Change the business priorities

Answer: A,E

NEW QUESTION # 58

.....

As one of the leading brand in the market, our SAFe-RTE practice materials can be obtained on our website within five minutes. That is the expression of their efficiency. Their amazing quality can totally catch eyes of exam candidates with passing rate up to 98 to 100 percent. We have free demos for your information and the demos offer details of real exam contents. All contents of SAFe-RTE practice materials contain what need to be mastered.
