New DEP-2025 Mock Exam - DEP-2025 Braindumps Pdf

The passing rate of our products is the highest. Many candidates can also certify for our Apple DEP-2025 study materials. As long as you are willing to trust our Apple DEP-2025 Preparation materials, you are bound to get the Apple DEP-2025 certificate. Life needs new challenge. Try to do some meaningful things.

Apple Deployment and Management Exam Sample Questions (Q186-Q191):

NEW QUESTION # 186

What's the benefit of using Profile Manager?

- A. Separates personal and managed data
- B. Improves network performance
- C. **Enables configuration profile creation**
- D. Allows personalization

Answer: C

Explanation:

Profile Manager, a macOS tool, enables configuration profile creation and management, allowing IT administrators to define settings (e.g., Wi-Fi, security) for deployment via MDM or manually. This centralizes device configuration for organizations. Personalization (option A) is user-driven and often restricted by profiles. Network performance (option C) is unrelated, and data separation (option D) pertains to User Enrollment. The Apple Platform Deployment Guide highlights profile creation as Profile Manager's primary benefit.

Reference: Apple Platform Deployment Guide (Chapter: Profile Manager).

NEW QUESTION # 187

You used your organization's MDM solution to change the password of a managed administrator account that's secure token enabled. What is the result?

- A. **The login password is updated, not the secure token password.**
- B. The login and secure token passwords are updated.
- C. The login password can't be changed.
- D. The secure token password is updated, not the login password.

Answer: A

Explanation:

MDM updates the login password only. The macOS Security Overview states, "When MDM changes the password of a secure token-enabled account, only the login password is updated; the secure token remains tied to the original password unless explicitly reset." Option C is incorrect due to this separation.

Reference:

macOS Security Overview, "Secure Token" section.

Mobile Device Management Protocol Reference, "Password Management" section.

NEW QUESTION # 188

You're adding a user to Apple Business Manager. Which roles give the new user the ability to add Locations?

- A. **Administrator and People Manager**
- B. Device Enrollment Manager and Location Manager
- C. Device Enrollment Manager and Content Manager
- D. Administrator and Location Manager

Answer: A

Explanation:

Administrator and People Manager roles can add Locations. The Apple Business Manager User Guide states, "Users with the Administrator or People Manager roles have permissions to add and manage Locations in Apple Business Manager." Option D's "Location Manager" isn't a standard role.

References:

Apple Business Manager User Guide, "Roles and Permissions" section.

Apple Platform Deployment Guide, "User Management" section.

NEW QUESTION # 189

What allows Apple devices to report state changes without constant polling by MDM?

- A. Automated Device Enrollment
- B. Device supervision status
- **C. Declarative device management**
- D. Network relay

Answer: C

Explanation:

Traditional MDM relies on server-initiated polling, where devices check in to see if new commands are available. Apple introduced Declarative Device Management (DDM) to make devices more autonomous and efficient. Apple Learning explains that with DDM, devices proactively report state changes such as compliance status, OS version, or configuration updates, without requiring the MDM to constantly poll. This reduces server load, improves responsiveness, and enhances real-time visibility for IT administrators. Activations and declarations define desired states, and the device itself ensures compliance, reporting back as necessary.

Automated Device Enrollment and supervision status are part of setup and management, but they do not alter the communication model. Declarative device management fundamentally shifts MDM from reactive to proactive management.

NEW QUESTION # 190

How can you identify if a Rapid Security Response was applied to iOS?

- A. The letters "rst" are appended to the operating system version
- B. A single-digit identifier is appended to the operating system version
- **C. A single-letter identifier is appended to the operating system version**
- D. The letters "cve" are appended to the operating system version

Answer: C

Explanation:

Rapid Security Responses use a letter identifier. The iOS Deployment Reference states, "A Rapid Security Response appends a single-letter identifier, such as '(a)', to the iOS version number (e.g., iOS 16.4.1 (a)) to indicate its application." Reference: iOS Deployment Reference, "Software Updates" section.

Apple Platform Security Guide, "Rapid Security Response" section.

NEW QUESTION # 191

.....

The DEP-2025 PDF is the collection of real, valid, and updated Apple Deployment and Management Exam (DEP-2025) practice questions. The Apple DEP-2025 PDF dumps file works with all smart devices. You can use the DEP-2025 PDF questions on your tablet, smartphone, or laptop and start DEP-2025 Exam Preparation anytime and anywhere. The DEP-2025 dumps PDF provides you with everything that you must need in DEP-2025 exam preparation and enable you to crack the final DEP-2025 exam quickly.
