Free PDF Quiz 2026 The Best ISTQB-CTFL: ISTQB Certified Tester Foundation Level (CTFL v4.0) Reliable Braindumps Ebook

We have three different versions of ISTQB Certified Tester Foundation Level (CTFL v4.0) prep torrent for you to choose, including PDF version, PC version and APP online version. Different versions have their own advantages and user population, and we would like to introduce features of PDF version for you. There is no doubt that PDF of ISTQB-CTFL Exam Torrent is the most prevalent version among youngsters, mainly due to its convenience for a demo, through which you can have a general understanding about our ISTQB-CTFL test braindumps, and also convenience for paper printing for you to do some note-taking.

Students are given a fixed amount of time to complete each test, thus ISTQB Exam Questions candidate's ability to control their time and finish the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam in the allocated time is a crucial qualification. Obviously, this calls for lots of practice. Taking TestKingFree ISTQB-CTFL Practice Exam helps you get familiar with the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam questions and work on your time management skills in preparation for the real ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) exam.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q202-Q207):

NEW QUESTION # 202
Given the following statements:
1. It can prevent defects by manual examination of the functional specification
2. It is effective since it can be performed very early in the software development life cycle
3. It can detect the failures in the running application
4. It can help eliminate defects in user stories
5. It can verify externally visible behaviors
Which set of statements represent values ONLY for static testing?

- A. 2,4,5
- B. 1,2,4
- C. 1,2, 3. 4,5
- D. 1,3, 4.5

Answer: B

Explanation:
Static testing involves reviewing and inspecting the code, requirements, or design documents without executing the code. It can prevent defects, is effective early in the software development life cycle, and can help eliminate defects in user stories.
Option 1: "It can prevent defects by manual examination of the functional specification" - This is a value of static testing.
Option 2: "It is effective since it can be performed very early in the software development life cycle" - This is a value of static testing.
Option 3: "It can detect the failures in the running application" - This is a v (ISTQB not-for-profit association)namic testing, not static testing.
Option 4: "It can help eliminate defects in user stories" - This is a value of static testing.
Option 5: "It can verify externally visible behaviors" - This is a value of dynamic testing, not static testing.
Therefore, the correct set of statements representing values only for static testing is 1, 2, 4, which corresponds to answer C6†source.

NEW QUESTION # 203
Which of the following statements about how different types of test tools support testers is true?

- A. The support offered by a bug prediction tool is often used by testers to track the bugs they found
- B. The support offered by a performance testing tool is often leveraged by testers to run load tests
- C. The support offered by a test data preparation tool is often leveraged by testers to run automated regression test suites
- D. The support offered by a continuous integration tool is often leveraged by testers to automatically generate test cases from a model

Answer: B

Explanation:
The support offered by a performance testing tool is often leveraged by testers to run load tests, which are tests that simulate a large number of concurrent users or transactions on the system under test, in order to measure its performance, reliability, and scalability. Performance testing tools can help testers to generate realistic workloads, monitor system behavior, collect and analyze performance metrics, and identify performance bottlenecks. The other statements are false, because:
* A test data preparation tool is a tool that helps testers to create, manage, and manipulate test data, which are the inputs and outputs of test cases. Test data preparation tools are not directly related to running automated regression test suites, which are test suites that verify that the system still works as expected after changes or modifications. Regression test suites are usually executed by test execution tools, which are tools that can automatically run test cases and compare actual results with expected results.
* A bug prediction tool is a tool that uses machine learning or statistical techniques to predict the likelihood of defects in a software system, based on various factors such as code complexity, code churn, code coverage, code smells, etc. Bug prediction tools are not used by testers to track the bugs they found, which are the actual defects that have been detected and reported during testing. Bugs are usually tracked by defect management tools, which are tools that help testers to record, monitor, analyze, and resolve defects.
* A continuous integration tool is a tool that enables the integration of code changes from multiple developers into a shared repository, and the execution of automated builds and tests, in order to ensure the quality and consistency of the software system. Continuous integration tools are not used by testers to automatically generate test cases from a model, which are test cases that are derived from a representation of the system under test, such as a state diagram, a decision table, a use case, etc. Test cases can be automatically generated by test design tools, which are tools that support the implementation and maintenance of test cases, based on test design specifications or test models.

NEW QUESTION # 204

Manager responsibilities in formal review includes ad except one of the following:

- A. Planning the review
- B. Determines if the review objectives have been met
- C. Allocate time for review
- D. Decide on the execution of reviews
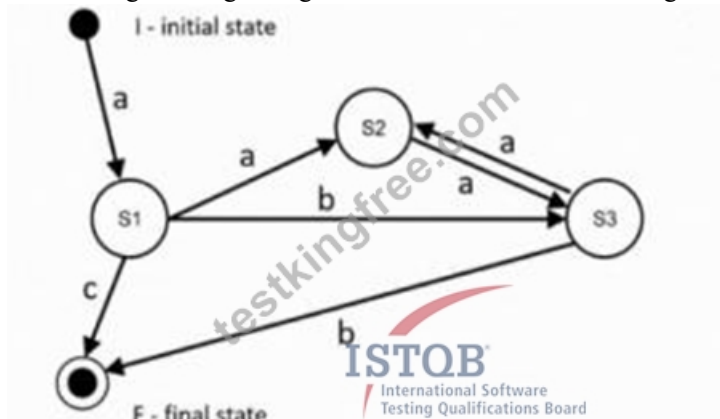

Answer: B

Explanation:
A formal review is a type of review that follows a defined process with formal entry and exit criteria and roles and responsibilities for participants. A formal review can have various roles involved, such as manager, moderator, author, reviewer and scribe. The manager responsibilities in formal review include all except one of the following:
Planning the review (correct responsibility)
Determines if the review objectives have been met (incorrect responsibility) Decide on the execution of reviews (correct responsibility) Allocate time for review (correct responsibility) The responsibility of determining if the review objectives have been met belongs to the moderator role, not to the manager role. NEW QUESTION # 205
The following state diagram is given as basis for state transition testing and contains only valid transitions:

Explanation of the state diagram: States are depicted as nodes. The initial state is I, the final state is F. A state transition is depicted as a directed arrow with the initiating event as a label, e. g. from I to S1 with event a, and is also written as a triple (I,a,S1). Note: A test case is a sequence of events that initiates the corresponding sequence of state transitions.
The state diagram contains the following 7 state transitions:
(I, a, S1)
(S1, a, S2), (S1, b, S3), (S1, c, F)
(S2, a, S3)
(S3, a, S2), (S3, b, F)
What is the minimum number of test cases to achieve 100% coverage of all valid state transitions in the diagram?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 206
Scenario 1 "Happy Tomatoes" (used for questions 20-22):
An intelligent application for agricultural use incorporates temperature sensors located at different points of an enclosure. The sensors measure and record the temperature at regular intervals and extract the statistical values for these measurements. These values include the average daily temperature.
A new variety of tomatoes is currently being grown and the "World Organization for Happy Tomatoes" has established temperature ranges related to vegetative development.

When the system establishes that the average temperature is within a specific range, it emits a value that will be used to monitor and control the crop.

Temperature in degrees Celsius	Output Values
Temperature detrimental to the crop (too cold)	≤7 → W
Vegetative development standstill temperature	8-21 → X
Ideal temperature for vegetative development	22-29 → Y
Temperature detrimental to the crop (too hot)	≥30 → Z

Using the equivalence partitioning technique, identify the set of input values that provides the HIGHEST coverage.

- A. {8,10,25,40}
- B. {7,10,25,40}
- C. {7,10,25,29}
- D. {7,10,21,40}

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation:
Equivalence partitioning (EP) divides input values into classes where test cases represent all possible values of each partition. The partitions in this scenario are:
≤7 (too cold → W)
8-21 (standstill → X)
22-29 (ideal → Y)
≥30 (too hot → Z)
Option C ({7,10,25,29}) covers all partitions by selecting representative values:
7 → Too cold (W)
10 → Standstill (X)
25 → Ideal (Y)
29 → Upper boundary of ideal (Y)
Other options do not cover all partitions adequately.
