## **HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q132- Q137):**

### NEW QUESTION # 132

Combining topics: In HCL Workload Automation 10.2 with DB2, automatic failover triggers, but new master cannot access old plans. What is required?

- A. Manual copy after switch
- B. HADR for plan database
- **C. Shared plan directory or synchronization job**
- D. Template for plan storage
- E. Variable table for paths

**Answer: C**

Explanation:

For backups to access historical plans post-failover, either store plans in a shared filesystem accessible to all or define a recurring job to synchronize plan files between primary and backups.

### NEW QUESTION # 133

After deploying HCL Workload Automation 10.2.3 in Kubernetes, the operations team notices that one dynamic agent fails to register, even though the wa-agent service is running. Inspection shows that `agent.dynamic.gateway.hostname` points to wa-agent, and `agent.dynamic.gateway.port` is set to 31114, but jobs never reach this agent. The hostname configured in `agent.dynamic.gateway.jmFullyQualifiedHostname` does not match the pod's actual hostname. How does this mismatch affect registration and workload execution?

- A. The mismatch is irrelevant; only the port matters for communication
- B. The mismatch only affects logging, but registration and job routing still work
- C. The mismatch forces the agent to use non-SSL communication but does not impact registration
- **D. The gateway cannot correctly identify and route messages to the agent, causing registration and job delivery to fail for that agent**

**Answer: D**

Explanation:

In the HCL Workload Automation Helm configuration, `agent.dynamic.gateway.jmFullyQualifiedHostname` identifies the hostname of the new dynamic agent that is connecting to the remote gateway. If this value does not match the actual agent hostname, the gateway may not correctly associate incoming connections with the corresponding registered workstation, resulting in failed registration or job routing for that agent. Both hostname and port need to be consistent for routing and identification; a mismatch affects connectivity rather than just logging or SSL behavior.

### NEW QUESTION # 134

DWC DB2 for z/OS `configureDb.vbs` on Windows fails with "DSN SYSTEM(DBB1) not authorized" during table population despite `dbadminuserpw` elevation. The `EQQINDWC JCL` used `DSN111.RUNLIB.LOAD` library. Which `dbadminuser` configuration grants batch execution authority for DWC schema creation?

- **A. Grant dbadminuser EXECUTE on DSN111.RUNLIB.LOAD and SYSADM to LOC1**
- B. Elevate `dbuser` instead of `dbadminuser` for schema population
- C. Configure `dbadminuser` as secondary RACF ID with JCL execution class
- D. Set `dbadminuserpw` with `SYSOPER` privilege for DBB1 subsystem

**Answer: A**

Explanation:

DB2 for z/OS requires `dbadminuser` with `EXECUTE` on `DSN111.RUNLIB.LOAD` library and `SYSADM` authority on `LOC1` location to authorize configured batch execution of DWC table DDL via underlying `DSNTIAD` plan.

### NEW QUESTION # 135

Scenario: Deploying HCL Workload Automation 10.2 with containers on OpenShift. Which tool is used alongside container images?

- A. Docker Compose directly
- **B. Helm chart**
- C. Standalone docker run
- D. Podman build
- E. Kubernetes YAML only

**Answer: B**

Explanation:

On OpenShift and Kubernetes environments, deployment with containers leverages Helm charts for managing the installation of server, console, and agent components with configurable parameters.

#### NEW QUESTION # 136

Production audit trails HCL HWA 10.2 show auditbox.msg rotation gaps during MDM failover; 2800 critical conman commands lost across 120 FTAs. DWC compliance gap 2 hours. What HA audit configuration ensures continuity?

- A. Liberty audit replication cluster-wide
- B. globalopts AUDIT\_HA=SYNC; secondary MDM config
- **C. localopts enAuditReplication=YES;auditSyncInterval=30;backupAuditPath=/ha/audit**
- D. conman "starthaaudit all"; failover test

**Answer: C**

Explanation:

enAuditReplication=YES;auditSyncInterval=30 mirrors auditbox.msg to /ha/audit preserving 2800 conman commands during 2-hour MDM failover gap across 120 FTAs; DWC compliance continuous vs global HA lacking workstation scope maintaining audit trail resilience for HA environments.
