Practice AWS-DevOps-Engineer-Professional Mock, Technical AWS-DevOps-Engineer-Professional Training

There is no doubt that in the future information society, knowledge and skills will be a major driver for economic growth and one of the major contributors to the sustainable development of the information industry. And getting the related AWS Certified DevOps Engineer - Professional certification in your field will be the most powerful way for you to show your professional knowledge and skills. However, it is not easy for the majority of candidates to prepare for the exam in order to pass it, if you are one of the candidates who are worrying about the exam now, congratulations, there is a panacea for you--our AWS-DevOps-Engineer-Professional Study Tool.

The AWS Certified DevOps Engineer - Professional exam is a challenging exam that requires candidates to have a deep understanding of AWS services and DevOps principles. AWS-DevOps-Engineer-Professional exam is designed to test the candidate's ability to design and implement DevOps practices using AWS services. AWS-DevOps-Engineer-Professional Exam consists of multiple-choice and multiple-response questions that cover a wide range of topics, including continuous delivery and deployment, infrastructure as code, monitoring and logging, and security and compliance.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which of the below 3 things can you achieve with the Cloudwatch logs service? Choose 3 options.

- A. Stream the log data to Amazon Kinesis
- B. Stream the log data into Amazon Elasticsearch in near real-time with Cloud Watch Logs subscriptions.
- C. Send the log data to AWS Lambda for custom processing or to load into other systems
- D. Record API calls for your AWS account and delivers log files containing API calls to your Amazon S3 bucket

Answer: A,B,C

Explanation:

Explanation

You can use Amazon CloudWatch Logs to monitor, store, and access your log files from Amazon Elastic Compute Cloud (Amazon EC2) instances, AWS CloudTrail, and other sources. You can then retrieve the associated log data from CloudWatch Logs.

For more information on Cloudwatch logs, please visit the below URL

* <http://docs.ws.amazon.com/AmazonCloudWatch/latest/logs/WhatsCloudWatchLogs.html>

NEW QUESTION # 96

You are currently using SQS to pass messages to EC2 Instances. You need to pass messages which are greater than 5 MB in size. Which of the following can help you accomplish this.

- A. Use SQS's support for message partitioning and multi-part uploads on Amazon S3.
- B. Use Kinesis as a buffer stream for message bodies. Store the checkpoint id for the placement in the Kinesis Stream in SQS.
- C. Use AWS EFS as a shared pool storage medium. Store filesystem pointers to the files on disk in the SQS message bodies.
- D. Use the Amazon SQS Extended Client Library for Java and Amazon S3 as a storage mechanism for message bodies. */

Answer: D

Explanation:

Explanation

The AWS documentation mentions the following

You can manage Amazon SQS messages with Amazon S3. This is especially useful for storing and consuming messages with a message size of up to 2 GB. To manage Amazon SQS messages with Amazon S3, use the Amazon SQS Extended Client Library for Java. Specifically, you use this library to:

Specify whether messages are always stored in Amazon S3 or only when a message's size exceeds 256 KB.

Send a message that references a single message object stored in an Amazon S3 bucket.

Get the corresponding message object from an Amazon S3 bucket.

Delete the corresponding message object from an Amazon S3 bucket. For more information on SQS and sending larger messages please visit the link

NEW QUESTION # 97

As CloudTrail sends a notification each time a log file is written to the Amazon S3 bucket, an account that's very active can generate

a large number of notifications. If you subscribe using email or SMS, you may end up receiving a large volume of messages. Which of the following should you use to handle notifications programmatically?

- A. Amazon Kinesis Firehose
- B. Amazon AppStream
- **C. Amazon Simple Queue Service (Amazon SQS)**
- D. Amazon Simple Email Service (Amazon SES)

Answer: C

Explanation:

As CloudTrail sends a notification each time a log file is written to the Amazon S3 bucket, an account that's very active can generate a large number of notifications. If you subscribe using email or SMS, you can end up receiving more messages than you can handle. AWS recommends that you subscribe using Amazon Simple Queue Service (Amazon SQS), which lets you handle notifications programmatically.

http://docs.aws.amazon.com/awsccloudtrail/latest/userguide/getting_notifications_configuration.html

NEW QUESTION # 98

Your company has a set of resources hosted in AWS. Your IT Supervisor is concerned with the costs being incurred by the resources running in AWS and wants to optimize on the costs as much as possible. Which of the following ways could help achieve this efficiently? Choose 2 answers from the options given below.

- **A. Use the Trusted Advisor to see underutilized resources**
- B. Create a script which monitors all the running resources and calculates the costs accordingly. Then analyze those resources accordingly and see which can be optimized.
- C. Create Cloudwatch logs to monitor underutilized resources and either shutdown or terminate resources which are not required.
- **D. Create Cloudwatch alarms to monitor underutilized resources and either shutdown or terminate resources which are not required.**

Answer: A,D

Explanation:

Explanation

You can use Cloudwatch alarms to see if resources are below a threshold for long periods of time. If so you can take the decision to either stop them or to terminate the resources.

For more information on Cloudwatch alarms, please visit the below URL:

* <http://docs.aws.amazon.com/AmazonCloudWatch/latest/monitoring/AlarmThatSendsEmail.html>

In the Trusted Advisor, when you enable the Cost optimization section, you will get all sorts of checks which can be used to optimize the costs of your AWS resources.

For more information on the Trusted Advisor, please visit the below URL:

* <https://aws.amazon.com/premiumsupport/trustedadvisor/>

NEW QUESTION # 99

A DevOps engineer is tasked with migrating Docker containers used for a workload to AWS. The solution must allow for changes to be deployed into development and test environments automatically by updating each container and checking it into a container registry. Once the containers are pushed, they must be deployed automatically. Which solution will meet these requirements?

- A. Store container images in AWS Artifact. Use AWS CodePipeline to trigger a deployment if a new container version is created. Use AWS CodeDeploy to deploy new containers to Amazon EKS.
- B. Store container images in Docker Hub. Install Docker on an Amazon EC2 instance and use AWS CodePipeline and AWS CodeDeploy to deploy any new containers.
- **C. Store container images in Amazon ECR. Use AWS CodePipeline to trigger a deployment if a new container version is created. Use AWS CodeDeploy to deploy the image to AWS Fargate.**
- D. Store container images in Amazon S3. Run the containers in AWS Elastic Beanstalk using a multicontainer Docker environment. Configure Elastic Beanstalk to redeploy the containers if it detects a new version in Amazon S3.

Answer: C
