Despite this, we offer you a 100% return of money, if you do not get through the exam, preparing for it with our SOL-C01 ExamDumps. No amount is deducted while returning the money.

## Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q160-Q165):

### NEW QUESTION # 160

A data engineer is tasked with creating a new database called `SALES DATA` within a Snowflake account. They want to ensure that only users with the 'ACCOUNTADMIN' role or a custom role 'SALES ADMIN' can manage the database's overall configuration. Which of the following steps are necessary to achieve this? (Choose all that apply)

- A. The 'ACCOUNTADMIN' role already has sufficient privileges; no additional grants are needed for it.
- B. Grant the `MODIFY` privilege on the DATABASE object to the 'SALES\_ADMIN' role.
- C. Grant the `USAGE` privilege on the 'DATABASE' object to the `SALES ADMIN` role.
- D. Grant the `OWNERSHIP` privilege on the 'SALES\_DATX' database to the 'SALES\_ADMIN' role.
- E. Grant the `CREATE SCHEMA` privilege on the `SALES DATA` database to the 'SALES\_ADMIN' role.

Answer: A,D

Explanation:

The 'OWNERSHIP' privilege grants the 'SALES ADMIN' role full control over the 'SALES DATA' database, including configuration. ACCOUNTADMIN inherently has ownership over all objects and requires no additional grants. 'CREATE SCHEMA' is for creating schemas within the database, 'MODIFY' is not a valid privilege on 'DATABASE' object, and 'USAGE' allows access but not management of the database object itself.

#### NEW QUESTION # 161

Which of the following settings can be configured for a Snowflake Virtual Warehouse? (Choose any 3 options)

- A. Auto-resume
- B. Cloud provider region
- C. Auto-suspend time
- D. Warehouse size

**Answer: A,C,D**

Explanation:

Snowflake Virtual Warehouses support several configuration parameters that directly influence compute behavior, performance, and cost control. Auto-suspend time determines how long the warehouse should remain idle before Snowflake automatically suspends it to save credits. Auto-resume enables automatic warehouse reactivation whenever a new query is submitted, ensuring seamless user experience without manual intervention. Warehouse size determines the compute resources available (e.g., X-SMALL, SMALL, MEDIUM, LARGE). Larger warehouses provide more CPU, memory, and parallel processing ability. Conversely, the cloud provider region cannot be configured at the warehouse level; it is determined when the Snowflake account is created and applies globally across the account. These warehouse settings enable efficient workload management, dynamic compute scaling, and cost optimization, allowing Snowflake users to tailor compute behavior to their analytics and data processing needs.

#### NEW QUESTION # 162

Which of the following is true about Snowflake's "auto-scale" feature for multi-clustered warehouses? (Choose any 2 options)

- A. It helps optimize resource utilization during variable workloads
- B. It is only available for standard warehouses
- C. It automatically adjusts the number of clusters based on query demand
- D. It requires manual intervention to add or remove clusters

**Answer: A,C**

Explanation:

Auto-scale enables Snowflake to dynamically start or stop clusters in a multi-cluster warehouse depending on workload pressure. When concurrency rises, Snowflake adds clusters; when demand decreases, it scales back down. This provides seamless performance during peak workloads and efficient resource usage during off-peak times. Auto-scale does not require manual action; it is fully automated once configured. It is not limited to standard warehouses; multi-cluster mode is available in Enterprise Edition and above. Ultimately, auto-scale ensures elasticity and cost-efficient compute allocation.

#### NEW QUESTION # 163

You have created an internal stage in Snowflake named 'my\_internal stage'. You want to grant the 'DATA LOADER' role the privilege to read files from this stage, but NOT the privilege to write files to it.

Which of the following SQL commands will achieve this?

- A.
- B.
- C.
- D.
- E.

**Answer: D**

Explanation:

The 'USAGE' privilege on a stage grants the ability to list files within the stage and read data from them. To grant the 'READ' privilege, USAGE must also be granted as a prerequisite. 'SELECT' is not applicable to stages. 'USAGE ON INTEGRATION' applies to integrations, not stages directly. 'READ, WRITE' grants both read and write privileges, which is not the desired outcome.

#### NEW QUESTION # 164

You are using Snowflake to load data from JSON files stored in an external stage. The JSON files have a nested structure, and you need to extract specific fields from the nested JSON objects into separate columns in your Snowflake table. Given the following simplified JSON structure:

Assuming the JSON data is loaded into a VARIANT column named 'RAW DATA', which of the following SQL snippets correctly extracts the customer name, street address, and order date into separate columns?

- A.
- B.
- C.
- D.
- E.

**Answer: C**

Explanation:

Option A is the most concise and idiomatic way to extract nested JSON fields in Snowflake using the colon (C) operator. This is the preferred method for accessing elements within a VARIANT column. The other options might work in some cases, but are not the standard or most efficient approach.
