- A. Bandwidth costs
- B. Data center maintenance costs
- C. Licensing costs
- D. Compute costs
- E. Human capital costs

Answer: B

Explanation:

Moving internal applications to the cloud typically allows organizations to significantly reduce or eliminate data center maintenance costs, which include costs associated with hardware, power, cooling, physical security, and staff needed to maintain the infrastructure. By leveraging the cloud, these expenses are shifted to the cloud service provider, resulting in potential savings for the organization.

NEW QUESTION # 456

A company decides to move some of its computing resources to a public cloud provider but keep the rest in-house. Which of the following cloud migration approaches does this BEST describe?

- A. Rip and replace
- B. Lift and shift
- C. Phased
- D. Hybrid

Answer: D

Explanation:
A hybrid cloud migration approach best describes the scenario where a company decides to move some of its computing resources to a public cloud provider but keep the rest in-house. A hybrid cloud is a type of cloud deployment that combines public and private cloud resources, allowing data and applications to move between them. A hybrid cloud can offer the benefits of both cloud models, such as scalability, cost-efficiency, security, and control. A hybrid cloud migration approach can help a company to leverage the advantages of the public cloud for some workloads, while maintaining the on-premise infrastructure for others. For example, a company may choose to migrate its web applications to the public cloud to improve performance and availability, while keeping its sensitive data and legacy systems in the private cloud for compliance and compatibility reasons. A hybrid cloud migration approach can also enable a gradual transition to the cloud, by allowing the company to move workloads at its own pace and test the cloud environment before fully committing to it.

NEW QUESTION # 457

A company needs to migrate an internal web application to a public cloud and is considering protocols that will allow the user community to access the application securely. Which of the following would meet this goal with the least amount of effort for the end user?

- A. SSH

- B. VPN
- C. HTTPS
- D. RDP

Answer: C

Explanation:
HTTPS (Hypertext Transfer Protocol Secure) is the most straightforward and least effort-intensive protocol for securely accessing a web application. It encrypts data transmitted between the user and the server, ensuring confidentiality and integrity without requiring additional configurations or complex setups for the end user. HTTPS is widely supported by web browsers, making it the ideal choice for secure web application access.
