IT업종 종사자분들은 모두 승진이나 연봉인상을 위해 자격증을 취득하려고 최선을 다하고 계실것입니다. 하지만 쉴틈없는 야근에 시달려서 공부할 시간이 없어 스트레스가 많이 쌓였을 것입니다. PassTIP의 Microsoft 인증 GH-900 덤프로 Microsoft 인증 GH-900 시험공부를 해보세요. 시험문제커버율이 높아 덤프에 있는 문제만 조금의 시간의 들여 공부하신다면 누구나 쉽게 시험패스 가능합니다.

Microsoft GH-900 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CICD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.

주제 2	<ul style="list-style-type: none"> Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
주제 3	<ul style="list-style-type: none"> Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
주제 4	<ul style="list-style-type: none"> Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
주제 5	<ul style="list-style-type: none"> Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.

Microsoft GH-900시험덤프샘플 - GH-900시험패스 인증덤프

현재 많은 IT인사들이 같은 생각하고 있습니다. 그것은 바로 Microsoft GH-900인증 시험자격증 취득으로 하여 IT업계의 아주 중요한 한걸음이라고 말입니다. 그만큼 Microsoft GH-900인증 시험의 인기는 말 그대로 하늘을 찌르고 있습니다,

최신 GitHub Administrator GH-900 무료샘플문제 (Q31-Q36):

질문 # 31

Which of the following are advantages of saved replies?
(Each correct answer presents part of the solution. Choose two.)

- A. Saved replies are tied to a GitHub user's personal account.
- B. Saved replies will send auto notifications when a user is tagged to an issue.
- C. Saved replies are allocated at the enterprise level for all users.
- D. Saved replies allow you to create a reusable response to issues and pull requests.

정답: A,D

설명:

Saved replies in GitHub are a feature that allows users to create and save templates of commonly used responses for issues and pull requests. This feature can significantly enhance productivity and ensure consistent communication.

Saved Replies Are Tied to a User's Personal Account:

Option A is correct because saved replies are specific to a user's GitHub account, meaning they are accessible to the user across all repositories they have access to.

Saved Replies Allow Reusable Responses:

Option C is correct because the primary purpose of saved replies is to allow users to create reusable responses for issues and pull requests, saving time and ensuring consistency.

Incorrect Options:

Option B is incorrect because saved replies are not allocated at the enterprise level; they are specific to individual user accounts.

Option D is incorrect because saved replies do not send auto notifications; they are manually inserted by the user when responding to issues or pull requests.

질문 # 32

Which of the following is the purpose of a GitHub repository?

- A. To provide a cloud-based hosting service for project documentation, providing a secure and centralized location for file storage
- B. To provide a folder that stores project files, including documentation, on your local machine
- C. To provide a collaborative space where developers can share and manage code files, track changes, and store revision history
- D. To provide a version control system designed for small projects, offering simple tools for organizing files on your laptop

정답: C

설명:

A GitHub repository serves as a collaborative space where developers can share and manage code files, track changes, and store revision history. It is much more than just a folder or simple tool; it is a comprehensive version control system that allows teams to collaborate effectively on codebases. Repositories enable developers to work together, manage contributions, review code, and maintain a complete history of every change made to the project.

질문 # 33

What are primary benefits of using GitHub issues templates?

(Each answer presents a complete solution. Choose two.)

- A. To easily coerce existing issues into a standard format
- B. To automatically create new branches when issues are created
- C. To provide an easy-to-fill-out form for creating new issues
- D. To automatically label or assign newly created issues

정답: C,D

설명:

The primary benefits of using GitHub issues templates include:

A . To automatically label or assign newly created issues: Issue templates can be configured to automatically apply labels or assign users when the issue is created, helping to streamline triage and management processes.

B . To provide an easy-to-fill-out form for creating new issues: Templates provide a standardized format for submitting issues, ensuring that all necessary information is captured and reducing the need for follow-up questions.

Coercing existing issues into a standard format or automatically creating new branches when issues are created are not functions provided by GitHub issues templates.

질문 # 34

Which of the following is the best GitHub feature for long-form documentation for a project?

- A. Insights
- B. Projects
- C. Wikis
- D. Pull Requests

정답: C

설명:

GitHub offers a variety of features for different aspects of project management and documentation. For long-form documentation, the best feature is Wikis. Wikis in GitHub allow you to create detailed, structured documentation that is easy to navigate and edit. Each repository in GitHub can have its own Wiki, which acts as a space for collaborators to maintain project documentation, guides, manuals, or any other long-form content.

Wikis are specifically designed to host extensive documentation in a way that is easy to reference and edit over time. They support Markdown, allowing you to format your documentation effectively. Unlike the other options, Wikis are explicitly intended for the purpose of long-form content, making them the best choice for this use case.

질문 # 35

The difference between GitHub Desktop and github.com is that Desktop:

- A. Is a self-hosted version of GitHub.
- B. Offers a graphical user interface.
- C. Is a standalone software application.
- D. Enables integration with office suite applications.
- E. Is only available on Windows operating systems.

정답: B

설명:

GitHub Desktop is a standalone application that provides a graphical user interface (GUI) for interacting with GitHub repositories, as opposed to the command-line or web-based interfaces available on github.com.

Graphical User Interface:

Option D is correct because GitHub Desktop offers a GUI, making it easier for users to manage repositories, perform commits, and handle other Git-related tasks without needing to use the command line.

Incorrect Options:

Option A is partially correct in that GitHub Desktop is a standalone application, but the key difference is the GUI.

Option B is incorrect because GitHub Desktop does not specifically enable integration with office suite applications.

Option C is incorrect because GitHub Desktop is available on both Windows and macOS.

Option E is incorrect because GitHub Desktop is not a self-hosted version of GitHub; it is a client application for accessing GitHub repositories.
