Salesforce Health Cloud Accredited Professional Sample Questions (Q87-Q92):

NEW QUESTION # 87
Bloomington Caregivers has reviewed the functionality of Integrated Care Management and decided to upgrade from the legacy Care Plans.
Which two statements are true with respect to Integrated Care Management?
Choose 2 answers

- A. Integrated Care Management uses a standard object CarePlan; the Case object is no longer used.
- B. Existing Care Plan Template records built in the legacy process can be used in the Integrated Care Management process; no data migration is required.
- C. Integrated Care Management is only made available by enabling the Enhanced Care Management setting in Salesforce Setup.
- D. Integrated Care Management leverages OmniStudio and the Discovery Framework to provide recommendations for what to add to a care plan based on the assessment.

Answer: C,D

NEW QUESTION # 88
An external provider wants to get a patient's allergy information from Bloomington Caregivers' Health Cloud system.
Which Health Cloud API should a consultant recommend?

- A. AllergyMedication API
- B. Q Interoperability API
- C. Clinical Summary Healthcare API
- D. Patient Healthcare API

Answer: B

Explanation:
Step-by-Step Explanation:
* Requirement:
* External provider needs access to patient allergy information.
* Interoperability API:
* Salesforce Health Cloud provides FHIR-based Interoperability APIs that expose clinical data, includingAllergyIntolerance resources.
* "Use the Health Cloud Interoperability API (FHIR R4) to retrieve AllergyIntolerance resources and other clinical data for a patient."-Health Cloud Interoperability API Guide
* Other Options:
* Clinical Summary Healthcare API:Provides a summary but not structured, granular allergy data.
* AllergyMedication API:Not a standard Salesforce API.
* Patient Healthcare API:Broader resource, but allergies specifically are available through the Interoperability API.

NEW QUESTION # 89

Bloomington Caregivers has replaced its legacy Contact Center application with Health Cloud. During user acceptance testing (UAT), the call center team is reporting differences between current Identity Verification business processes and what was built in Health Cloud.

The call center manager has requested the following changes:

* Birth Date be available in results and as an optional verifier, but no longer required for verification purposes
* Add 'Bloomington ID', a custom field on Account, to search results and as a required verifier What should a consultant do to meet these requirements?

- A. Add two new Identity Verification Process Field records for 'Bloomington ID'; one with Field Type set to Result Field and one with Field Type set to Required Verifier. Change the Birth Date record with Field Type value Required Verifier to Optional Verifier.
- B. Add two new Identity Verification Process Field records for 'Bloomington ID'. Set the Field Type to Result Field and set the Required field to true. Add the new record to the Lightning component parameters in the identity flow screen in Flow Builder.
- C. Add two new Identity Verification Process Field records for 'Bloomington ID'; one with the Field Type set to Result Field and one with Field Type set to Optional Verifier. Delete the Birth Date record which has the Field Type value Required Verifier.
- D. Add 'Bloomington ID' to the picklist choices within the Identity Verification flow and mark it as required. Remove the Birth Date record from the required fields picklist and add Birth Date to the optional verifiers picklist.

Answer: A

Explanation:
In Salesforce Health Cloud, Identity Verification Processes allow you to configure how patient or contact identities are verified during interactions. The requirements from the call center team involve modifying the verification process to:
Include "Bloomington ID":
This custom field should be added as a required verifier and also included in search results.
Modify "Birth Date":
Remove it as a required verifier while keeping it available as an optional verifier in the process.
Steps to Implement the Solution:
Add Two New Identity Verification Process Field Records for 'Bloomington ID':
Field Type: Result Field: Ensures the field appears in the search results.
Field Type: Required Verifier: Makes this field mandatory for identity verification.
Modify Birth Date Record:
Update the existing record for Birth Date by changing its Field Type from "Required Verifier" to "Optional Verifier." This adjustment makes the field optional in the verification process.
This approach ensures the flexibility and compliance requested by the call center manager while aligning with Salesforce Health Cloud's configurable Identity Verification features.

NEW QUESTION # 90

Which industry data standard should a consultant consider when designing interoperability with electronic health record (EHR) sources with Health Cloud?

- A. Clinical Data Acquisition
- B. FHIRR4
- C. Personal Health Record (PHR)
- D. HL7 v1 Messaging

Answer: D

NEW QUESTION # 91

Bloomington Caregivers has decided to enable Integrated Care Management so that Its end users can leverage Health Cloud Assessments. Administrators must now configure their org to be able to use Assessments.

Which three steps should the administrator take as part of the org setup to enable Assessments?
Choose 3 answers

- A. Update sharing settings in Setup.
- B. Download and Install OmniStudio.
- C. Enable Discovery Framework in Setup.
- D. Enable users to view and complete Assessments.
- E. Add the Assessment component to the Patient page

Answer: B,C,D

Explanation:
To enable Assessments in Salesforce Health Cloud, administrators must configure the org appropriately, ensuring that users can effectively utilize assessment tools for patient evaluations. The following steps are essential:
* Download and Install OmniStudio (Answer A):
* Purpose: OmniStudio provides a suite of declarative tools, including OmniScripts and DataRaptors, essential for building and managing assessments within Health Cloud.
* Implementation Steps:
* Access Salesforce AppExchange: Navigate to the AppExchange marketplace.
* Search for OmniStudio: Locate the OmniStudio package suitable for your Salesforce edition.
* Install the Package: Follow the installation prompts, ensuring that all components are correctly deployed.
Reference: For detailed installation instructions, refer to Salesforce's official documentation: OmniStudio Installation.
Enable Users to View and Complete Assessments (Answer B):
Purpose: Granting appropriate permissions ensures that users can access, view, and complete assessments as part of patient care management.
Implementation Steps:
Assign Permission Sets:
Health Cloud Permission Sets: Assign relevant Health Cloud permission sets to users, such as Health Cloud Standard or Health Cloud Platform, to provide baseline access.
