問題 #193

By default, ONUs connected to the same PON port of a Huawei OLT can communicate with each other at Layer 2 if they use the same service VLAN.

- A. FALSE
- B. TRUE

答案: A

解題說明:

* Default Behavior of ONUs :

* By default, ONUs (Optical Network Units) connected to the same PON port of a Huawei OLT are isolated at Layer 2 .

* This isolation ensures that ONUs cannot communicate directly with each other, even if they belong to the same service VLAN.

* Why FALSE?

* The statement incorrectly claims that ONUs can communicate with each other at Layer 2 by default. In reality, Layer 2 isolation is a security feature designed to prevent unauthorized communication between ONUs.

* Enabling Communication :

* If Layer 2 communication between ONUs is required, it must be explicitly enabled through configuration (e.g., by disabling Layer 2 isolation).

Thus, the correct answer is B .

問題 #194

The router mainly works in OSI Which layer in the model?

- A. Physical layer
- B. Link layer
- C. Transport layer
- D. Network layer

答案: D

問題 #195

In the GPON network, which of the following statements is incorrect?

- A. GEM Port identifies the service virtual channel between the OLT and ONU/ONT, that is, the channel that carries the service flow, similar to the VPI/VCI identification in the ATM virtual connection.
- B. Each GEM Port is identified by a unique Port-ID. The Port-ID ranges from 0 to 4095 and is globally assigned by the OLT. That is, each ONU/ONT under the OLT cannot use GEMs with repeated Port-IDs. Port.
- C. Each T-CONT is composed of one or more GEM Ports, and each GEM Port carries a service flow. A T-CONT can carry data streams of one or more types of services.
- D. Each GPON port supports up to 32 ONU/ONT

答案: D

問題 #196

Generally, MAC addresses are purchased from the IEEE and can be customized.

- A. FALSE
- B. TRUE

答案： A

解題說明：

The first 24 bits (OUI) of a MAC address are purchased by manufacturers from the IEEE. The remaining 24 bits are assigned by the manufacturer and are not customizable by end-users. While some advanced systems allow temporary MAC address changes, the statement is false because the OUI is fixed and tied to the manufacturer.

問題 #197

Generally, you are advised to configure NMS VLANs as follows:

```
vlan 350 smart
vlan desc 350 description "Manage"
port vlan 350 0/8 0
```

- A. FALSE
- B. TRUE

答案： A
