## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q118-Q123):

### NEW QUESTION # 118

How many applications menus can an application have?

- A. 3, one for an application's user modules, one for an application's administrator modules, and one for the ServiceNow administrator's modules
- B. As many as the application design requires
- C. 1, which is used for all application modules
- D. 2, one for an application's user modules and one for an application's administrator modules

**Answer: B**

### NEW QUESTION # 119

A scoped application containing Flow Designer content dedicated to a particular application is called a(n):

- A. Flow
- B. Spoke

- C. Bundle
- D. Action

**Answer: B**

Explanation:

<https://docs.servicenow.com/bundle/paris-servicenow-platform/page/administer/flow-designer/concept/spokes.html>

A spoke is a scoped application containing Flow Designer content dedicated to a particular application or record type. Flow Designer provides a set of core actions to automate Now Platform processes. You can add application-specific core actions by activating the associated spoke.

**NEW QUESTION # 120**

Tables that extend a table do what?

- A. Inherit the parent's fields
- B. Sometimes inherit the parent's fields
- C. Do not inherit the parent's fields
- D. Automatically update the application scope

**Answer: A**

Explanation:

Tables that extend a table inherit the parent's fields. Extending a table means creating a child table that shares the same columns and business logic as the parent table. For example, the Incident table extends the Task table, which means that all fields defined on the Task table are also available on the Incident table. Extending a table allows for reusing existing fields and behaviors without duplicating them on multiple tables. Reference: Table extension and classes

**NEW QUESTION # 121**

What syntax is used in a Record Producer script to access values from Record Producer form fields?

- A. `producer.variablename`
- B. `current.variable_name`
- C. `current.field_name`
- D. `producer.field_name`

**Answer: A**

Explanation:

The syntax used in a Record Producer script to access values from Record Producer form fields is `producer.variable_name`. A Record Producer is a type of catalog item that allows users to create records on any table from the service catalog. A Record Producer script is a server-side script that runs when a Record Producer is submitted, and can be used to set values or perform actions on the generated record. The `producer` object is a global object that represents the Record Producer form and its variables. The `variable_name` is the name of the variable defined in the Record Producer. Reference: [ServiceNow Docs - Record producers], [ServiceNow Docs - Record producer script]

**NEW QUESTION # 122**

Which of the following is NOT a way to install an application on a ServiceNow instance?

- A. Select the **Copy** button on the application record
- B. Install an application from the Application Repository
- C. Download and install an application from the ServiceNow Share web site
- D. Download and install a third-party application from the ServiceNow Store

**Answer: A**

## Explanation:

There is no "copy" button on the application record (at least I couldn't see one). Also, see here: [https://docs.servicenow.com/bundle/sandiego-application-development/page/build/applications/reference/r\\_ManagingApplications.html](https://docs.servicenow.com/bundle/sandiego-application-development/page/build/applications/reference/r_ManagingApplications.html)

## NEW QUESTION # 123

.....
