Analytics-DA-201 Latest Test Format - Analytics-DA-201 PDF

The unmatched and the most workable study guides of Exam4Labs are your real destination to achieve your goal. The pathway to pass Analytics-DA-201 was not so easy and perfectly reliable as it has become now with the help of our products. Just you need to spend a few hours daily for two weeks and you can surely get the best insight of the syllabus and command over it. The Analytics-DA-201 Questions and answers in the guide are meant to deliver you simplified and the most up-to-date information in as few words as possible.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.

Topic 2	• SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S • 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 3	• ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.

Salesforce Certified Tableau Data Analyst Sample Questions (Q124-Q129):

NEW QUESTION # 124

You have a blank dashboard.

You want to add two sheets to the dashboard. The sheets must support the Show/Hide button.

To which two objects can you add the sheets? (Click the two appropriate Options in the Answer Area.)

Answer:

Explanation:

To add two sheets to the dashboard that support the Show/Hide button, you can add them to either a horizontal or a vertical container. A container is an object that can hold one or more sheets or other objects and allow you to arrange them in a layout. A Show/Hide button is a feature that lets you hide or show a container and its contents on the dashboard. You can add a Show/Hide button to any container, whether it is tiled or floating, by using the drop-down menu of the container and selecting "Add Show/Hide Button." You can also customize the appearance and behavior of the button.

To add a horizontal or a vertical container to the dashboard, you can drag them from the Objects pane to the dashboard. A horizontal container will arrange the sheets or objects horizontally, while a vertical container will arrange them vertically. You can then drag the sheets you want to add from the Sheets pane to the container. You can resize and reorder the sheets or objects within the container by using the handles and arrows.

The other objects in the Answer Area, such as text, image, web page, blank, navigation, download, and extension, do not support the Show/Hide button. They are either static elements that cannot hold other objects, or dynamic elements that require user interaction or external sources. You can add them to the dashboard as well, but they will not have the same functionality as a container with a Show/Hide button.

NEW QUESTION # 125

What should a Data Analyst use to visualize the distribution and variability of measure values along an axis?

- A. Histogram
- B. Bullet Graph
- C. Box Plot
- D. Scatter Plot

Answer: C

NEW QUESTION # 126

Open the link to Book1 found on the desktop. Open the Histogram worksheet and use the Superstone data source.

Create a histogram on the Quantity field by using bin size of 3.

Answer:

Explanation:

check the steps below in explanation.

Explanation:

To create a histogram on the Quantity field by using bin size of 3, you need to do the following steps:

- * Open the link to Book1 found on the desktop. This will open the Tableau workbook that uses the Superstore data source.
 - * Click on the Histogram tab at the bottom of the workbook to open the Histogram worksheet. You will see a blank worksheet with no marks.
 - * Right-click on Quantity in the Measures pane and select Create Bins from the menu. This will open a dialog box that allows you to create bins for the Quantity field. Bins are groups of values that are treated as one unit in a histogram.
 - * Enter 3 in the Size of bins text box. This will set the bin size to 3, which means that each bin will contain values that are 3 units apart. For example, one bin will contain values from 0 to 2, another bin will contain values from 3 to 5, and so on.
 - * Click OK to create the bins. You will see a new field named Quantity (bin) in the Measures pane with a # sign next to it.
 - * Drag Quantity (bin) from the Measures pane to Columns on the worksheet. This will create a histogram that shows the distribution of Quantity by bins. You will see bars that represent the frequency or count of values in each bin.
 - * Optionally, you can adjust the width, color, and labels of the bars by using the options on the Marks card. You can also add filters, tooltips, or annotations to enhance your histogram.

NEW QUESTION # 127

You want to add a comment to March 2020 as shown in the following visualization.

You have the following sets in a Tableau workbook

- * Top N Customers
- * Customers of 2020
- * Top N Products
- * Sellers of 2020

Which two sets can you combine? Choose two

- A. Sellers of 2020
- B. Customers of 2020
- C. Top N Products
- D. Top N Customers

Answer: B,D

Explanation:

To combine two sets, they must have at least one dimension in common. In this case, Customers of 2020 and Top N Customers both have Customer Name as a dimension, so they can be combined using set operations such as union, intersection, or difference. Sellers of 2020 and Top N Products have different dimensions (Seller Name and Product Name), so they cannot be combined.

References: <https://help.tableau.com/current>

[/pro/desktop/en-us/sets.htm](https://help.tableau.com/current/pro/desktop/en-us/sets.htm) https://help.tableau.com/current/pro/desktop/en-us/sets_create.htm#combine-sets In Tableau, sets can be combined if they are created from the same dimension. From the options provided,

"Customers of 2020" and "Top N Customers" are likely created from the same dimension (Customers).

Therefore, these two sets can be combined to create a new set that includes or excludes members based on the combined criteria. Combining sets like "Top N Products" with "Customers of 2020" would not be feasible unless they are from the same dimension, which is typically not the case.

NEW QUESTION # 128

You have the following view.

□ You want to filter the view to show only records that have a movie name starting with the word. "The". You must achieve the goal without writing any formulas.

Which type of filter should you use?

- A. Condition
- B. Wildcard
- C. General
- D. Top

Answer: B
