Free Oracle 1Z1-922 Dumps to prepare for the MySQL Implementation Associate 1Z1-922 exam is a great way to gauge your progress in preparation. You can also check your progress with the help of evaluation reports. These reports will help you know where you stand in your preparation and boost your confidence.

Oracle MySQL Implementation Associate Sample Questions (Q321-Q326):

NEW QUESTION # 321

What is the purpose of normalization in database design?

- A. To improve query performance
- B. To increase storage capacity
- C. To create more complex table structures
- D. To eliminate data redundancy and improve integrity

Answer: D

Explanation:

Normalization reduces data redundancy and ensures data integrity by organizing data into related tables. This leads to better data consistency across the database.

NEW QUESTION # 322

Which two advantages does the HeatWave Cluster provide in MySQL Database Service?

- A. Faster backups for large databases
- B. Parallel processing of analytic queries
- C. Real-time analytics with in-memory execution
- D. Increased consistency for transactional workloads

Answer: B,C

Explanation:

The HeatWave Cluster accelerates query performance by using parallel processing of analytical queries across distributed nodes, and it allows for real-time analytics by executing queries in-memory.

NEW QUESTION # 323

What does the WITH GRANT OPTION clause do in a GRANT statement?

- A. It grants a user the ability to pass on their privileges to others
- B. It grants all privileges to a user
- C. It removes all privileges from the user
- D. It allows a user to modify their own privileges

Answer: A

Explanation:

The WITH GRANT OPTION clause allows a user to pass on any privileges they have been granted to other users.

NEW QUESTION # 324

Which MySQL parameter is responsible for disabling the query cache?

- A. innodb_flush_method
- B. query_cache_size
- C. query_cache_type
- D. query_cache_limit

Answer: C

Explanation:

The query_cache_type parameter controls whether the query cache is enabled or disabled. Setting this parameter to OFF disables query caching entirely.

NEW QUESTION # 325

Which of the following is a characteristic of MySQL semi-synchronous replication?

- A. The primary server waits for at least one replica to acknowledge the receipt of the transaction before committing
- B. All replicas must acknowledge the transaction before it is committed
- C. The replica server is always in sync with the primary
- D. The primary server waits for at least one replica to apply the transaction before committing

Answer: A

Explanation:

In semi-synchronous replication, the primary server waits for one replica to acknowledge receipt of the transaction before committing, but it does not wait for the replica to apply the transaction.

NEW QUESTION # 326
