### NEW QUESTION # 45

Refer to the exhibit. Which three pieces of information does the diagnose sys top command provide? (Choose three.)

```
# diagnose sys top

- C. The diagnose sys top command has been running for 18 minutes.
- D. The miglogd daemon is running on CPU core ID 0.
- E. The cmdbsvr process is occupying 2.4% of the total user memory space.

Answer: C,D,E

Explanation:

The last column shows the CPU core ID, so you can see miglogd is running on core 0.

The "Run Time" line tells you how long the system (and thus the top command) has been up - 18 minutes in this case.

The MEM% column shows cmdbsvr is using 2.4 % of memory.

```

What two actions can the administrator take to resolve this issue? (Choose two.)

- **A. Ensure the user is a member of at least one AD group to ensure step 4 of the LDAP authentication process is successful.**
- **B. Ensure the account is active.**
- C. Ensure the user logs in using 'John Smith' not 'jsmith'.
- D. Ensure the user is providing the correct user credentials.

**Answer: A,B**

Explanation:

When FortiGate's LDAP authentication can't find any matching DN it reports "get all dn - found no DN," which usually means the user either isn't in the group(s) you've told FortiGate to check or the account isn't currently active.

Ensure the user is a member of at least one AD group.

If you've configured FortiGate to restrict logins to specific groups, any user not in one of those groups will simply never be found by the LDAP search.

Ensure the account is active.

FortiGate's default search filter excludes disabled or locked accounts, so a disabled user object will likewise never show up in the DN search.
