## Exam EAEP2201 Introduction - EAEP2201 Valid Cram Materials

You may doubt that how can our EAEP2201 exam questions be so popular and be trusted by the customers all over the world. To create the best EAEP2201 study materials, our professional have been devoting all their time and efforts. They have revised and updated according to the syllabus changes and all the latest developments in theory and practice, so our EAEP2201 Practice Braindumps are highly relevant to what you actually need to get through the certifications tests.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q37-Q42):

### NEW QUESTION # 37

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer. The organization is concerned with the hosting server's available resources. Which system resource should be closely monitored?

- A. CPU utilization
- B. Disk activity
- C. Network utilization

**Answer: A**

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hosting server executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source: ArcGIS Enterprise documentation on system performance monitoring.

### NEW QUESTION # 38

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- \* Services added to the shared instance pool
- \* Log retention settings reduced
- \* Log level set to Debug
- \* ArcGIS Server machine restarted
- \* An additional ArcGIS Server site federated

What is causing this slow performance?

- A. Federating the additional ArcGIS Server site
- B. Restarting ArcGIS Server
- C. Adjusting the log level to Debug
- D. Additional services in the shared instance pool

**Answer: C**

Explanation:

Setting the log level to Debug can significantly impact performance and disk space. Debug-level logging writes detailed information about every process and service request to log files, which can rapidly fill up disk space and consume server resources, leading to performance degradation.

From ArcGIS Server documentation:

"The debug log level is used only for troubleshooting specific problems and should not be used in a production environment as it can negatively affect performance and result in excessive disk space usage."

\* Option A is partially valid, but shared instance pooling is designed for efficient resource use and generally improves performance when used properly.

\* Option C is unrelated to performance directly unless misconfigured.

\* Option D (restart) is typically neutral or helpful.

### NEW QUESTION # 39

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Hosting Server site
- B. ArcGIS Raster Analytics Server site
- C. ArcGIS Image Hosting Server site

**Answer: C**

#### NEW QUESTION # 40

An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.

Which action should the administrator perform?

- A. Batch delete users with ArcPy
- B. Use command line utilities
- C. Delete users using the Member tab

**Answer: B**

Explanation:

The most efficient and supported method for managing and removing multiple users after a Portal for ArcGIS upgrade is by using command line utilities, specifically the deleteusers utility included with Portal for ArcGIS. This tool allows administrators to batch delete user accounts by referencing a file that lists usernames. This method is especially useful when needing to quickly reduce the number of named users to comply with licensing restrictions.

Deleting users individually via the Member tab (Option B) is time-consuming and inefficient when dealing with large numbers of accounts. Using ArcPy (Option C) is not supported for managing Portal users in bulk.

Reference Source: ArcGIS Enterprise Administrator Guide - Portal for ArcGIS tools and command line utilities

#### NEW QUESTION # 41

A client requires an ArcGIS Server site that provides the following capabilities

\* Serve several cached image services Each service is published from a single raster and updated once a year with new imagery from which a new cache is generated offline before publishing

\* Serve a dynamic feature class of 1,000 points coming from a PostgreSQL enterprise geodatabase Which licensing role does the client need for this ArcGIS Server site?

- A. GIS Server
- B. Image Server
- C. Mission Server

**Answer: B**

#### NEW QUESTION # 42

.....

Our company has always been following the trend of the EAEP2201 certification. Our research and development team not only study what questions will come up in the EAEP2201 exam. The content of our EAEP2201 practice materials is chosen so carefully that all the questions for the exam are contained. And our study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently. If you desire a EAEP2201 Certification, our products are your best choice.
