Free PDF Salesforce - Mule-Arch-202 Fantastic Latest Test Vce

As mentioned earlier, CertkingdomPDF solves all problems that you face while locating updated Salesforce Certified MuleSoft Platform Integration Architect (Mule-Arch-202) exam questions. We know that as an applicant for the test, you have excessive pressure to pass the Salesforce Certification Exam. CertkingdomPDF is here to help you earn the highly sought-after Salesforce Certified MuleSoft Platform Integration Architect (Mule-Arch-202) certification on the first attempt. Don't wait to get help from our Salesforce Mule-Arch-202 real exam dumps to crack the test quickly. You can better comprehend CertkingdomPDF's Salesforce Certified MuleSoft Platform Integration Architect (Mule-Arch-202) exam questions if you know about the three formats described here.

Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q160-Q165):

NEW QUESTION # 160

When designing automated tests for Mule applications, what should be considered to create effective performance tests (Choose

Two)

- A. Testing only the application's UI responsiveness.
- B. Focusing solely on the security aspects of the application.
- **C. Measuring the throughput and response times of APIs.**
- **D. Simulating peak load conditions.**

Answer: C,D

NEW QUESTION # 161

An organization uses a set of customer-hosted Mule runtimes that are managed using the MuleSoft-hosted control plane. What is a condition that can be alerted on from Anypoint Runtime Manager without any custom components or custom coding?

- A. When a Mule runtime's customer-hosted server is about to run out of disk space
- B. When a Mule runtime license installed on a Mule runtime is about to expire
- **C. When a Mule runtime on a given customer-hosted server is experiencing high memory consumption during certain periods**
- D. When an SSL certificate used by one of the deployed Mule applications is about to expire

Answer: C

NEW QUESTION # 162

What capability does the Salesforce Connector provide to Mule applications?

- A. Batch processing of Salesforce records.
- **B. Execution of SOQL and SOSL queries within flows.**
- C. Real-time event tracking on all Salesforce objects.
- D. Integration with Salesforce Chatter only.

Answer: B

NEW QUESTION # 163

A developer at an insurance company has developed a Mule application that has two modules as dependencies for two different operations. These two modules use the same library Joda-Time to return a DateTimeFormatter class. One of the module uses Joda-Time version 2.9.5 and the other one uses Joda-Time version 2.1.1. The DateTimeFormatter class lives in the same package in both versions, but the different implementations of each version make the classes incompatible.

First Module

```
public DateTimeFormatter getCreateTimestampDateTimeFormatter() {  
    // Here DateTimeFormatter is from joda-time 2.9.5  
    return DateTimeFormat.forPattern("yyyyMMdd");  
}
```

Second Module

```
public DateTimeFormatter getUpdateTimestampDateTimeFormatter() {  
    // Here DateTimeFormatter is from joda-time 2.1.1  
    return DateTimeFormat.forPattern("yyyyMMddHH24mm");  
}
```

Given the details of these two modules, what will happen when the Mule application is deployed?

- A. It will load both module versions and, when each individual operation is executed, it will not run into any errors
- B. The deployment will fail because the two modules try to return the same class
- **C. It will only load one of the versions; the module that needs the unloaded version of the package will behave differently and be prone to errors such as ClassCastException or NoSuchMethodException**
- D. It will only load the latest version of Joda-Time; older versions of Joda-Time applications will throw a ClassLoaderException error

Answer: C

NEW QUESTION # 164

A Mule Process API is being designed to provide product usage details. The Mule application must join together the responses from an Inventory API and a Product Sales History API with the least latency.

How should each API request be called in the Mule application to minimize overall latency?

- A. Call each API request in a separate Mule flow
- B. In a separate lookup call from a DataWeave reduce function
- **C. In a separate route of a Scatter-Gather**
- D. Call each API request in a Batch Step within a Batch Job

Answer: C

NEW QUESTION # 165

.....

We will try our best to solve your problems for you. I believe that you will be more inclined to choose a good service product, such as Mule-Arch-202 learning question. After all, everyone wants to be treated warmly and kindly, and hope to learn in a more pleasant mood. The authoritative, efficient, and thoughtful service of Mule-Arch-202 learning question will give you the best user experience, and you can also get what you want with our Mule-Arch-202 study materials. I hope our study materials can accompany you to pursue your dreams. If you can choose Mule-Arch-202 test guide, we will be very happy. We look forward to meeting you.
