## Nutanix NCA-6.10 Reliable Exam Book | Valid NCA-6.10 Test Cram

Getting the Nutanix Certified Associate v6.10 certification exam is necessary in order to get a job in your desired tech company. Success in the Nutanix Certified Associate v6.10 (NCA-6.10) certification exam gives you an edge over the others because you will have certified skills. The Nutanix Certified Associate v6.10 certification exam badge will make a good impression on the interviewer. Most of the people planning to attempt the NCA-6.10 Exam are confused that how will they prepare and pass NCA-6.10 exam with good grades.

## Nutanix Certified Associate v6.10 Sample Questions (Q34-Q39):

### NEW QUESTION # 34

An administrator has spent time correcting specific issues that have been identified by NCC Health Checks in Prism Element. How can just the checks that previously did not pass be executed again to confirm they are all resolved?

- A. Run `ncc health checks run_all`.
- B. Select Run Check for each check worked.
- C. Run LCM Pre-Upgrade to trigger NCC Checks.
- D. Select Only Failed And Warning Checks.

**Answer: D**

Explanation:

To rerun only the health checks that previously failed or issued warnings, the administrator can select the Only Failed and Warning Checks option in Prism Element. This targeted approach helps verify that resolved issues have been addressed without rerunning all checks unnecessarily.

Steps:

- \* Navigate to Prism Element > Health > NCC Checks.
- \* Filter for Only Failed and Warning Checks and rerun them.

Other options:

- \* A. Run LCM Pre-Upgrade: Runs pre-upgrade checks, not related to health check validation.
- \* B. Run ncc health\_checks run\_all: Executes all checks, not just failed ones.
- \* C. Select Run Check for each check worked: Requires manual execution for each check.

References:

Nutanix Administration Guide - Health Checks.  
Nutanix Cluster Check (NCC) Documentation.

### NEW QUESTION # 35

What is the minimum cluster size for Redundancy Factor 3?

- A. 4 nodes
- B. 3 nodes
- C. 6 nodes
- **D. 5 nodes**

**Answer: D**

Explanation:

[https://portal.nutanix.com/page/documents/details?targetId=Web-Console-Guide-Prism-v5\\_20:arc-redundancy-factor3-c.html](https://portal.nutanix.com/page/documents/details?targetId=Web-Console-Guide-Prism-v5_20:arc-redundancy-factor3-c.html)

### NEW QUESTION # 36

What is the benefit of configuring user-defined Alert Policies in Prism Central?

- A. It restricts network access for administrators.
- B. It automates VM migrations.
- C. It reduces the frequency of system updates.
- **D. It customizes alert thresholds.**

**Answer: D**

Explanation:

The correct answer is A. It customizes alert thresholds.

User-defined Alert Policies in Prism Central allow administrators to define custom alert conditions and thresholds tailored to specific workload behaviors and operational requirements. This helps fine-tune monitoring by setting alert criteria for metrics such as CPU usage, memory utilization, IOPS, latency, etc., beyond the default system-generated alerts.

Key Capabilities Include:

- \* Define conditions using predefined metrics.
- \* Set thresholds and severity levels.
- \* Associate alerts with specific entities like VMs, hosts, or clusters.
- \* Integrate with email, SNMP, or third-party tools.

Prism Central UI Navigation Path:

Alerts & Monitoring > Alert Policies > Create Alert Policy

Official Reference:

- \* Nutanix Administration Guide - Alerts and Monitoring
- \* Excerpt: "User-defined alert policies in Prism Central allow administrators to define custom thresholds for system metrics, enabling more granular and proactive monitoring."
- \* Nutanix Prism Central Guide - Alert Policies Section

Conclusion: Custom alert policies do not automate VM migrations (C), limit access (B), or control update frequency (D). Only option A reflects the actual function.

### NEW QUESTION # 37

What is the purpose of the OpLog?

- A. Dynamic read cache
- B. Global metadata
- **C. Persistent write buffer**
- D. Persistent data storage

**Answer: C**

Explanation:

The OpLog (Operational Log) in Nutanix serves as a persistent write buffer for incoming I/O operations. It temporarily stores write requests to ensure fast acknowledgment to clients and better performance. The data is later coalesced and written to the Extent Store for long-term storage.

\* A. Persistent write buffer: Correct, as the OpLog optimizes write performance by buffering writes temporarily.

\* B. Persistent data storage: Incorrect, as this describes the Extent Store, not the OpLog.

\* C. Global metadata: Incorrect, as metadata operations are handled by the Metadata Store.

\* D. Dynamic read cache: Incorrect, as read caching is managed separately, often involving SSD-based caches.

### NEW QUESTION # 38

Which Nutanix Disaster Recovery component or feature provides the best Recovery Time Objective (RTO)?

- A. Async
- B. NearSync
- **C. Metro Availability**
- D. Availability Zone

**Answer: C**

Explanation:

Nutanix Metro Availability provides the best Recovery Time Objective (RTO) because it enables synchronous replication between two sites. In the event of a failure at one site, VMs can be instantly restarted on the other site with minimal disruption. This setup ensures zero data loss and near-instantaneous recovery.

\* A. Async: Provides high RPO (Recovery Point Objective) but has a longer RTO compared to synchronous replication methods.

\* B. Availability Zone: This term refers to a general site setup, not specific to recovery objectives.

\* C. Metro Availability: Correct, as it uses synchronous replication for near-zero RTO.

\* D. NearSync: Provides better RPO than Async but does not match the RTO of Metro Availability.
