Cisco 300-710 New Study Notes, 300-710 Reliable Dumps

Our Cisco 300-710 web-based practice exam software also simulates the Securing Networks with Cisco Firepower (300-710)

environment. These Cisco 300-710 mock exams are also customizable to change the settings so that you can practice according to your preparation needs. VerifiedDumps web-based 300-710 Practice Exam software is usable only with a good internet connection. You can use this Cisco 300-710 version on any operating system, and this software is accessible through any browser like Opera, Safari, Chrome, Firefox, and IE.

Cisco 300-710 certification exam covers various topics related to Cisco Firepower NGFW, including configuring and managing NGFW policies, network access control policies, URL filtering, and advanced malware protection. 300-710 exam also tests the candidate's knowledge of network security concepts, such as intrusion prevention systems (IPS), secure sockets layer/transport layer security (SSL/TLS) decryption, and virtual private networks (VPNs). Passing the Cisco 300-710 Exam demonstrates that the candidate has the necessary skills and knowledge to implement and manage Cisco Firepower NGFW, which is a critical component in protecting an organization's network infrastructure from cyber threats.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q245-Q250):

NEW QUESTION # 245

What is the disadvantage of setting up a site-to-site VPN in a clustered-units environment?

- A. VPN connections can be re-established only if the failed master unit recovers.
- B. Smart License is required to maintain VPN connections simultaneously across all cluster units.
- C. Only established VPN connections are maintained when a new master unit is elected.
- **D. VPN connections must be re-established when a new master unit is elected.**

Answer: D

Explanation:

NEW QUESTION # 246

An engineer must configure high availability for the Cisco Firepower devices. The current network topology does not allow for two devices to pass traffic concurrently. How must the devices be implemented in this environment?

- A. in a cluster span EtherChannel
- B. in active/active mode
- C. in cluster interface mode
- **D. in active/passive mode**

Answer: D

NEW QUESTION # 247

An organization is using a Cisco FTD and Cisco ISE to perform identity-based access controls. A network administrator is analyzing the Cisco FTD events and notices that unknown user traffic is being allowed through the firewall. How should this be addressed to block the traffic while allowing legitimate user traffic?

- A. Modify Cisco ISE to send only legitimate usernames to the Cisco FTD.
- B. Modify the Cisco ISE authorization policy to deny this access to the user.
- C. Add the unknown user in the Malware & File Policy in Cisco FTD.
- **D. Add the unknown user in the Access Control Policy in Cisco FTD.**

Answer: D

Explanation:

NEW QUESTION # 248

A network administrator discovers that a user connected to a file server and downloaded a malware file. The Cisco FMC generated an alert for the malware event, however the user still remained connected. Which Cisco APM file rule action within the Cisco FMC must be set to resolve this issue?

- A. Detect Files
- B. Reset Connection
- C. Local Malware Analysis
- **D. Malware Cloud Lookup**

Answer: D

NEW QUESTION # 249

A Cisco FTD device is running in transparent firewall mode with a VTEP bridge group member ingress interface. What must be considered by an engineer tasked with specifying a destination MAC address for a packet trace?

- A. Only the UDP packet type is supported
- **B. The destination MAC address is optional if a VLAN ID value is entered**
- C. The VLAN ID and destination MAC address are optional
- D. The output format option for the packet logs unavailable

Answer: B

Explanation:
